

**THE DISTRICT OF COLUMBIA
WATER QUALITY ASSESSMENT**

2014 INTEGRATED REPORT TO THE US ENVIRONMENTAL PROTECTION AGENCY
AND CONGRESS PURSUANT TO
SECTIONS 305(b) AND 303(d) CLEAN WATER ACT (P.L. 97-117)

District Department of the Environment
Natural Resources Administration
Water Quality Division

PREFACE

The Water Quality Division of the District of Columbia's District Department of the Environment, Natural Resources Administration, prepared this report to satisfy the listing requirements of §303(d) and the reporting requirements of §305(b) of the federal Clean Water Act (P.L. 97-117). The report provides water quality information on the District of Columbia's surface and ground waters that were assessed during 2012-2013 and updates the water quality information required by law. Various programs in the Natural Resources Administration contributed to this report including the Fisheries and Wildlife Division, the Stormwater Management Division, and the Watershed Protection Division. The Lead and Healthy Housing Division, Environmental Protection Administration also contributed to this report.

Questions or comments regarding this report should be forwarded to the address below.

PART I: EXECUTIVE SUMMARY

The District of Columbia 2014 Integrated Report provides information on the quality of the District's water. The Integrated Report combines the comprehensive biennial reporting requirements of the Clean Water Act's Section 305(b) and the Section 303(d) listing of waters for which total maximum daily loads (TMDLs) maybe required.

District of Columbia Water Quality

Thirty-six waterbody segments were monitored for the goals of the Clean Water Act that apply to the District. Each of the waterbodies has been assigned designated uses in the District's water quality standards. The standards also outline numeric and narrative criteria that must be met if a waterbody is to support its uses. Various types of water quality data collected during the period of 2009 to 2013 were evaluated to assess use support of the waterbodies. The evaluation found that the designated uses that directly relate to human use of the District's waters were generally not supported. The uses related to the quality of habitat for aquatic life were not supported. No waterbody monitored by the Water Quality Division (WQD) fully supported all of its designated uses. The water quality of the District's waterbodies continues to be impaired.

Tables 1.1 to 1.3 show the degree to which the waters of the District supported their designated uses. Appendices 3.4 to 3.8 are maps showing the degree to which those waters met their uses.

Groundwater is not monitored on the same basis as surface water. This is partly due to the fact that surface water north of the District's boundary, not groundwater, is the drinking water source for the District. However, groundwater quality is scrutinized via compliance monitoring and on-going studies.

**TABLE 1.1
DESIGNATED USE SUPPORT BY RIVERS OR STREAMS**

Waterbody Type: River, Streams	Degree of Use Support			
	Supporting (mi)	Not Supporting (mi)	Insufficient Information (mi)	Not Assessed (mi)

Aquatic Life Use	4.15	1.78	-	-
Fish Consumption Use	-	5.93	-	-
Navigation Use	5.93	-	-	-

* = not a designated use

Causes and Sources of Water Quality Impairment

The major causes of impairment to the District's rivers, lakes, and estuaries are organic enrichment/low dissolved oxygen (DO).

The sources with major impacts on District waters are combined sewer overflows (CSO), and urban runoff/storm sewers. Municipal point sources on the estuaries also have a major impact. Rivers and streams are also impacted by bacteria and toxics.

Programs to Correct Impairment

Several programs within the District Department of the Environment (DDOE), Natural Resources Administration (NRA) are involved in activities to correct water quality impairment through the following programs:

- Water pollution control program;
- Sediment and stormwater control program;
- Nonpoint source program; and
- Groundwater protection program.

The water pollution control program implements the water quality standards, monitors and inspects permitted facilities in the District, and comprehensively monitors the District's waters to identify and reduce impairment. The water pollution control program is involved in the search for solutions that will provide maximum water quality benefits.

Given the District's urban landscape, nonpoint source pollution has a large impact on its waters. The sediment and stormwater control program regulates land disturbing activities, stormwater management, and flood plain management by providing technical assistance and inspections throughout the city. The District is also conducting stream restoration activities to improve habitat as well as implementing a RiverSmart program to reduce polluted runoff. The nonpoint source program also provides education and outreach to residents and developers on pollution prevention to ensure that their actions do not further impair the city's water quality.

Several activities are coordinated within the groundwater protection program. Those activities include underground storage tank installation and remediation, and groundwater quality standards implementation.

Construction of the Anacostia River segment of the stormwater storage tunnel of the District's CSO Long Term Control Plan (LTCP) has begun. The plan involves the construction of large underground tunnels that will serve as collection and retention systems for combined sewage during high flow conditions. Under a 2005 Agreement, the LTCP will be implemented over a 20 year period.

Water Quality Trends

Both of the main waterbodies, the Potomac and Anacostia Rivers support fish and other wildlife populations. But the small streams aquatic communities are still stressed. The Potomac River continues to benefit from the CSO improvements and the implementation of improvements and biological nutrient removal at the Blue Plains wastewater treatment plant. The Anacostia River remains aesthetically and chemically polluted. Much remains to be done.

There have been considerable changes in the submerged aquatic vegetation (SAV) attributes from year to year including; species diversity, cover density, and total acreage values for the grass beds that are observed. The one thing that has remained consistent is the direct relationship that exists between the relative abundance of certain fish species, and the presence or absence of viable SAV beds.

Highlights

Low impact development (LID) projects to improve the quality and reduce the quantity of stormwater runoff are being implemented throughout the city. Projects such as rain gardens, green roofs, rain barrels, and school yard conservation sites continue to be installed or planned.

Stream survey activities occurred during 2012-2013. Information gathered will help to track trends for the streams. Real-time monitoring stations are located on both the Anacostia and Potomac Rivers. This monitoring activity allows web-based viewing of water quality parameters by the general public on an on-going basis.

PART II: BACKGROUND

The Government of the District of Columbia's environmental protection responsibilities are delegated to DDOE. DDOE's Natural Resources Administration (NRA) is comprised of the Fisheries and Wildlife Division (FWD), the Stormwater Management Division (SWMD), the Water Quality Division (WQD), and the Watershed Protection Division (WPD).

Atlas and Total Waters

Table 2.1 is a general view of the resources of the District. Figure 2.1 is the monthly and yearly total rainfall graph. The District's rainfall totals were above average for last year. (The National Weather Service, Washington National Airport (the official rain gauge site) is the source for the rainfall totals). Figures 2.2 and 2.3 present monthly and yearly mean flow data for the Anacostia and Potomac Rivers, from 2012-2013 (Source: United States Geological Survey (USGS)).

TABLE 2.1
ATLAS

State population: 601,723 (2010 Census)
State surface area: 69 square miles
Number of water basins: one
Total number of river miles: 39 miles
Number of perennial river miles: 39 miles
- Number of intermittent stream miles: none
- Number of ditches and canals: none ¹
- Number of border miles: none
Number of lakes, reservoirs, ponds: eight
Acres of lakes/reservoirs/ponds: 238 acres
Square miles of estuaries/harbors/bays: 6.1 square miles ¹
Acres of freshwater tidal wetlands: 180 ²
Names of border waterbodies: Potomac River estuary
Number of border estuary miles: 12.5 miles

¹Impoundments are classified according to their hydrologic behavior. The District classifies the C&O Canal as a lake. The estuary estimate includes the Washington Ship Channel, the Channel Lagoon, and Little River.

²This total is compiled from the District's Watershed Protection Division.

Figure 2.1: Monthly, yearly and normal total rainfall (inches), 2012-2013 (Source: National Weather Service, Reagan National Airport)

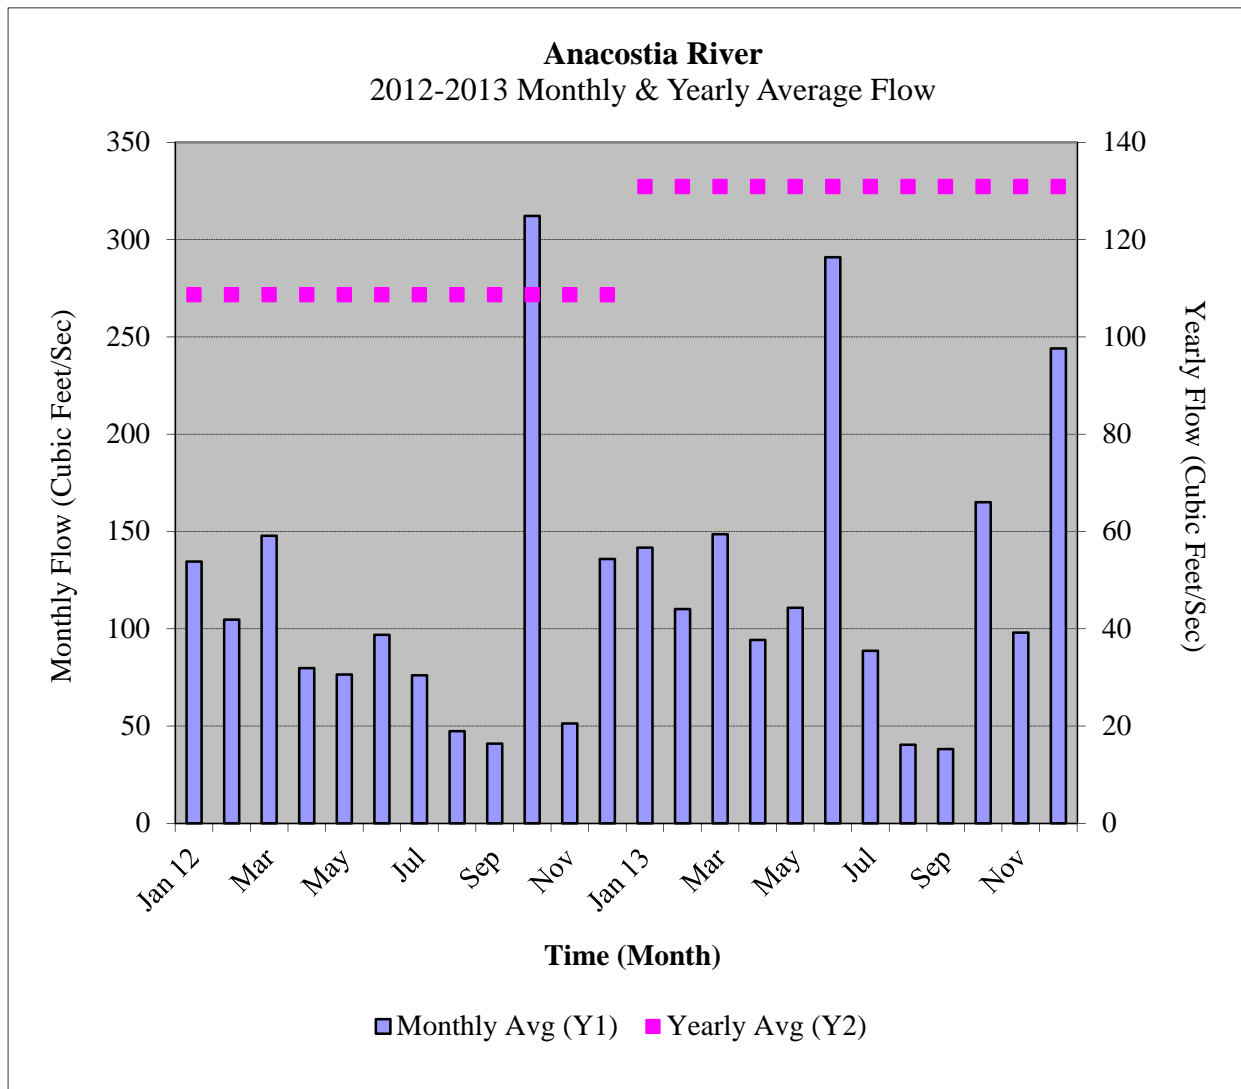

Figure 2.2: Monthly and yearly average flow on the Anacostia River, 2012-2013 (Source: USGS)

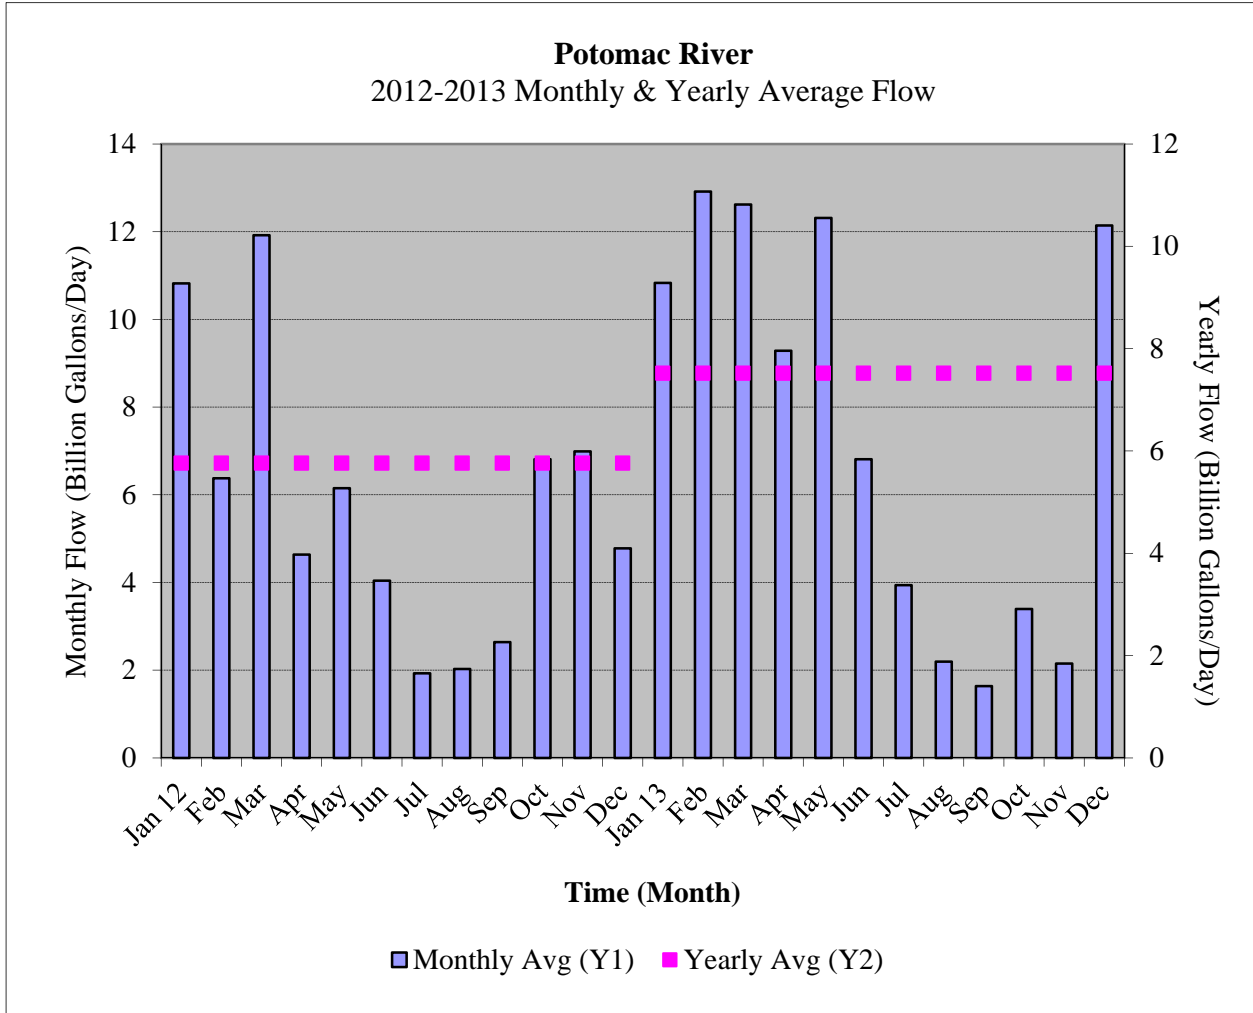

Figure 2.3: Monthly and yearly average flow on the Potomac River, 2012-2013 (Source: USGS)

Maps

Appendix 2.1 is a map outlining the major watersheds within the District.

Water Pollution Control Programs

Watershed Approach

The mission of the District's Nonpoint Source Program is to prevent and control nonpoint source pollution in the District's watersheds. Employing both regulatory and non-regulatory approaches, the Program works to safeguard the District's water and soil resources as well as the health and welfare of citizens using those resources.

The creation of this watershed approach report is written in response to the Integrated Report. This report documents the progress made in 2012 and 2013 by the District in implementing its Nonpoint Source Management Plan. As in previous biennial years report, the District's Nonpoint Source Program has made significant progress towards achieving its short and long-term goals. Long-term goals and short-term milestones to mark progress toward those goals are outlined in the District Nonpoint Source Management Plan II: Addressing Polluted Runoff in an Urban Environment (2000). The Plan is aimed at reducing nonpoint source pollution from urban runoff, construction, and hydrologic/habitat modification and includes:

- Supporting activities that reduce pollutant loads from urban runoff, construction activity, combined sewer overflows and trash disposal for the purpose of attaining present designated uses by 2015 and future designated uses by 2025;
- Supporting programs and activities that strive to restore and maintain healthy natural habitat, species diversity and necessary base flow to all of the Anacostia River tributaries by 2015 and to all surface waters of the District of Columbia by 2025 by restoring degraded watersheds and preserving healthy ones;
- Coordinating the District Nonpoint Source Program efforts with other District, federal, not-for-profit, environmental advocacy, private sector programs and adjoining jurisdictions to deliver the best possible nonpoint source pollution prevention and control services in the District, with the resources available; and
- Carrying out effective information and education campaigns on nonpoint source pollution prevention to targeted audiences who live, work, teach or visit in the District and its watersheds, reaching at least ten thousand (10,000) individuals each year.

The District's Nonpoint source management program has also created three detailed Watershed Implementation Plans (WIPs) for three major watersheds in the District. These plans, the Oxon Run WIP (2010), the Rock Creek WIP (2010) and the Anacostia River WIP (2012) have been approved by EPA. Additionally, the District participated in the development of the Army Corps of Engineers (USACE) facilitated Anacostia Watershed Restoration Plan which was released to the public in April of 2010. These plans lay out waterbody impairments, technically appropriate implementation projects, and timelines that guide DDOE in its work.

DDOE assesses the health of all significant waterbodies in the District, and prioritizes water quality improvement efforts based on data gathered from water quality monitoring. DDOE then characterizes waterbody impairments and threats; these characterizations are included in the District's Section 305(b) of the Integrated Report as required by the federal CWA. The report describe many of the District waterbodies as not supporting their swimmable (primary contact) and fishable (fish consumption) designated uses.

WPD continues to coordinate with several District stakeholders including the National Park Service (NPS), the District Department of Parks and Recreation (DPR), the District Department of Transportation (DDOT), the District Office of Planning (OP), the Anacostia Watershed Society, and the Casey Trees Endowment. Since the inception of the EPA's Chesapeake Bay Program (CBP) the District has been an active participant. The program is a public-private partnership consisting of governments in Pennsylvania, Maryland, Virginia, the District of Columbia, the Chesapeake Bay Commission, EPA, citizens, and businesses. Begun in 1983 with the first Chesapeake Bay Agreement, the purpose of the program is to develop and implement coordinated plans to improve and protect the living resources of the Bay.

The District participates in many of the committees, subcommittees and work groups of the Bay Program. On December 3, 2001, the Mayor, along with the other signatories, signed the Chesapeake 2000 Agreement that guides the program until 2010. The District of Columbia sees its participation in the CBP as a way to help restore the Bay and to secure resources and inter-jurisdictional support to clean up its waters which drain into the Bay.

The watershed approach is central to the current effort to restore the Anacostia River. Although the tidal portion of the river is within the District, it is fed by two major tributaries in Maryland, the Northeast and Northwest Branches, which are the main sources of fresh water to the river. The branches drain Montgomery and Prince George's Counties in Maryland. The Anacostia River watershed approach began with the signing of the Anacostia Watershed Restoration Agreement in 1987 by the Mayor of the District of Columbia and the Governor of Maryland.

Since 1987, both parties have reaffirmed their commitment to the Anacostia River cleanup on several occasions. The latest agreement was on May 10, 2001. On December 31, 2001, the signatories to this agreement signed a document that sets targets to measure progress for a restored Anacostia River. From these two agreements, the Metropolitan Washington Council of Governments (MWCOC) established the Anacostia Watershed Restoration Committee to help coordinate regional efforts to restore the river.

In June 2006, MWCOC in partnership with the Anacostia jurisdictions established a new Anacostia Restoration Partnership. The structure of the partnership includes a Leadership Council, Steering Committee, and Management Committee (revamped Anacostia Watershed Restoration Committee). The partnership is responsible for the development and tracking of a Comprehensive Anacostia Watershed Restoration Plan.

Water Quality Standards Program

DDOE conducted its triennial review of the District's water quality standards (WQS) as required by Section 303(c) of the CWA (33 U.S.C. § 1313 (c)) and the District's Water Pollution Control Act of 1984. During the 2013 triennial review the District revised aquatic life numeric criteria for acrolein from 10.0 µg/L to 3.0 µg/L and also established aquatic life numeric criteria for carbaryl pesticide. The change was based on EPA toxicity data and other information on the effects of acrolein and carbaryl that were obtained from EPA's internal and external peer review, including scientific input from the public. The new criteria will protect most aquatic species from adverse effects due to their exposure. The final rulemaking of the 2013 WQS has been approved by EPA Region III.

Point Source Program

National Pollutant Discharge Elimination System (NPDES) Permits

Background

Currently, there are eleven facilities (see Table 2.2) in the District which have been issued individual (site-specific) industrial discharge permits by EPA under the NPDES program. The Wastewater Treatment Plant (WWTP) operated by DC Water (previously known as District of Columbia Water and Sewer Authority (DC WASA)) continues to be the major discharger. The WWTP, along with other industrial NPDES permitted facilities, are frequently inspected to insure compliance with permit conditions and the District's WQS.

**TABLE 2.2
NPDES PERMITTED FACILITIES IN THE DISTRICT OF COLUMBIA**

Permittee/Facility	Permit No	Current Status	Inspection Frequency
Washington Aqueduct – Dalecarlia Plant	DC0000019	Major	once a year
Potomac Electric Power Company (PEPCO), Benning Road	DC0000094	Major	once a year

World War II Veterans Memorial	DC0000345	Minor	once every 3 years
Walter Reed Army Medical Center	DC0000361	Minor	once every 3 years

Compliance Inspections

WQD conducts periodic compliance inspections of facilities that have been issued an NPDES permit in accordance with annual NPDES Permitting and Enforcement work plans that are submitted to EPA. Compliance inspections are recognized as a vital part of the District's NPDES Program. Appropriate enforcement actions are recommended to EPA for violations and/or deficiencies noted during the compliance inspections. Inspection violations/ deficiencies which do not require a formal enforcement action are handled at the time of the inspection.

The objective of the NPDES Compliance Inspection Program is to provide a level of inspection coverage necessary to assess permit compliance and develop enforcement documentation. The District of Columbia NPDES Compliance Inspection Program generally conducts only Compliance Evaluation Inspections (CEI), but may perform Compliance Sampling Inspection (CSI) if required. The CEI is an inspection designed to verify permittee's compliance with applicable permit effluent limits, self-monitoring requirements and compliance schedules. This inspection involves records reviews, visual observations, and evaluations of the treatment facilities, effluent, receiving waters and disposal practices. The CEI may be a non-sampling or sampling inspection in which sample types other than those required for permittee self-monitoring are collected. From January 2012 to December 2013, the WQD conducted fifteen compliance inspections at the facilities listed in Table 2.3

**TABLE 2.3
NPDES PERMITTED FACILITIES INSPECTED**

NPDES ID	Permit Name	Type of Facility
DC0000019	Washington Aqueduct - Dalecarlia Plant	Major
DC0000094	PEPCO Environment Management Services	Major

Review and Certification of Draft US EPA Permits

The District is not a delegated state under the NPDES program and therefore cannot issue its own discharge permits. Draft NPDES permits prepared by the EPA are reviewed by the WQD for completeness, compliance with both federal and District laws and WQS in accordance with Section 401 of the CWA. WQD may require changes in a draft permit so as to more stringently comply with applicable laws and standards. Changes in draft permits may also incorporate comments received from various parties during the public comment period, the announcement of which is made in one or more of the District's local newspapers. The announcement for public comments is a joint venture by both EPA and the District. Final certified permits are issued for a five year period, but contain re-opener clauses in case facility conditions and/or WQS or regulations change. From January 2012 and December 2013, WQD reviewed and/or certified the NPDES permits listed in Table 2.4.

**TABLE 2.4
PERMITS REVIEWED AND CERTIFIED BY WQD**

Permitted Facility	Reviewed/Certified

World War II Veterans Memorial	Certification
CMDT Naval District Washington, DC	Certification
Government of the District of Columbia – MS4	Reviewed
Draft Construction General Permit	Reviewed
Extension of Construction General Permit	Certification
Pesticide General Permit	Certification
Half Street, SE LLC – Groundwater Discharge	Certification

Wetlands Protection

Review and Certification of Permits Issued Under Section 404 of the Clean Water Act

The WQD reviews and certifies permits issued by the USACE – Baltimore District under Section 10 of the Rivers and Harbors Act of 1899 and/or Section 404 of the Clean Water Act, as published in the March 12, 2007 Federal Register, Final Notice of Issuance, Reissuance, and Modification of Nationwide Permits (NWP)(72 FR 11090). Under Section 404 of the Clean Water Act, the District aims at no net loss of wetlands, stream areas, and their functions within the District. To achieve this goal, the WQD reviews all activities and construction projects, which may impact wetlands and streams in the District, and certifies permits issued by the USACE under Section 404 and 401 of the Clean Water Act. When the USACE delineates a wetland, makes a jurisdictional determination (JD), and issues a dredge and fill permit, the WQD reviews the delineation report, JD and permit for completeness and compliance with both federal

and the District’s laws, and WQS. Based on the results of the review, WQD can certify the permit or deny the certification.

Although the purpose of the review process is to avoid and minimize impacts, it is anticipated that some projects that may impact wetlands and streams will still be allowed to proceed. These projects include water dependent projects and projects for which there is no practicable alternative. Mitigation is always required for permanent impacts associated with these types of projects. Mitigation of impacts to wetlands and streams are considered in accordance with the following sequence:

- Avoidance: Modification of the scope of the proposed activity, or construction to completely avoid the potential impacts to the wetland or stream.
- Reduction/Minimization: Reduction of the necessary impacting activity to the greatest extent practicable.
- Restoration: Rectifying the impact by repairing, rehabilitating, or restoring the affected wetland or stream following completion of the activity or construction.
- Compensation: Compensating for the impact to the wetland or stream by creating or enhancing an alternative wetland/stream.

Table 2.5 list projects reviewed and certified between January 2012 and December 2013.

NWP’s REVIEWED AND CERTIFIED**

Permittee	Certification Number	Project Description
SPAWARSYSCEN-Pacific	DC#12-001	To collect 12 sediment cores to a depth of 2 feet below the bottom substrate to verify an in situ measurement of grain size within the Anacostia River.
GenOn Potomac River, LLC	DC#12-002	To emplace a 5-foot wide by 80-foot long sand bag diversion 10 feet channel ward of the approximate mean high water shoreline for the clean out of outfall pipe.
U.S. EPA, Region III	DC#12-003	Discharges incidental to normal operation of commercial vessels and non-recreational vessels equal to or greater than 79 feet in length. The discharges eligible for coverage under the proposed permit include, but are not limited to, deck wash-down and runoff from routine deck cleaning, bilge water from properly functioning oily water separators, ballast water, and boiler/economizer blow-down.
U.S. EPA, Region III	DC#12-004	Discharges incidental to normal operation of commercial vessels and non-recreational vessels less than 79 feet in length. The discharges eligible for coverage under the proposed permit include, but are not limited to, deck wash-down and runoff from routine deck cleaning, bilge water from properly functioning oily water separators, ballast water, and boiler/economizer blow-down.

Permittee	Certification Number	Project Description
U.S. EPA, Region III	DC#12-006	WMATA Mississippi Avenue Pumping Station (the permittee) to discharge treated groundwater collected from inbound and outbound track drainage areas within a 7,000-foot section of tunnel and perimeter drains of the vent shaft from St. Elizabeth's Hospital and the Southern Avenue Station on WMATA's "F" Route (Green Line).
Department of the Army Baltimore District, U.S. Army Corps of Engineers	DC#12-007	DDOE has determined that the public interest in the activities authorized under the proposed NWP's in the District of Columbia, requires an individual comprehensive review process and evaluation by the Corps, and subsequent Section 401 water quality certification by DDOE. The substantive standards found in the Environmental Protection Agency Clean Water Act §404(b)(1) guidelines, the Corps' public interest review regulations and policy memoranda of the two agencies provide for this public interest review by both the Corps and DDOE.
U.S. EPA, Region III	DC#12-008	To discharge the following waste streams: groundwater seepage from a steam tunnel that runs under Rock Creek, steam condensate that forms on steam pipes in a tunnel, and stormwater from roof drains to receiving waters named Rock Creek within the District of Columbia.
United States Army Technology Application Office (TAO)	DC#12-009	To install a telecommunication line consisting of one six inch steel casing, containing inner duct with fiber optic cable underneath the riverbed of the Potomac River from Bolling Air Force Base to Reagan National Airport, Washington, District of Columbia.
Government of the District of Columbia / Office of the Deputy Mayor of Planning and Economic Development	DC#12-010	To conduct 33 geotechnical borings by rotary drilling from a barge in the Washington Channel, along Water Street and Ohio Drive, SW, Washington, DC.
Federal Highways Administration / Eastern Federal Lands Highway Division	DC#12-011	To install gabion baskets in Rock Creek, west of the intersection of R Street NW and Sheridan Circle NW in Rock Creek Park, Washington, DC.
District Department of the Environment	DC#12-012	To install temporary fencing and to plant Vallisneria americana in the Anacostia River, upstream of the James Creek Marina and east of the intersection of Water Street SW and Half Street SW, Washington, DC.
District Department of the Environment	DC#12-013	To construct a stream restoration project by regenerative stormwater conveyance (RSC) method in unnamed tributary of Broad Branch Creek, NW in Washington, DC.
Commodore of Seafarers Yacht Club	DC#12-014	To replace existing damaged decking from Docks G and C in the Anacostia River at 1950 M Street, SE, Washington, DC.
District Department of the Environment	DC#12-016	To install temporary fencing and to plant Vallisneria americana in the Anacostia River along the shoreline of Diamond Teague Park, east of the intersection of Potomac Avenue NE and First Street NE, Washington, DC.

Permittee	Certification Number	Project Description
District Department of the Environment	DC#12-017	To install temporary fencing and to plant <i>Vallisneria americana</i> in the Anacostia River, south of Heritage Island and north of the East Capitol Street Bridge at the crossing of the Anacostia River, Washington, DC.
Office of the Deputy Mayor of Planning and Economic Development	DC#12-018	To construct piers and docks in the Washington Channel along Water Street and Ohio Drive, SW, SE, Washington, DC.
Federal Highways Administration / Eastern Federal Lands Highway Division	DC#12-020	To stabilize and enhance a portion of Rock Creek, west of the intersection of R Street, NW and Sheridan Circle, NW in Rock Creek Park, Washington, DC.
Pepco Holdings, Inc.	DC#13-001	To conduct an ecological assessment including analytical sediment sampling of approximately 55 subsurface locations in the Anacostia River, in Washington, DC.
National Zoological Park	DC#13-002	To construct stone riprap for outfall protection in Rock Creek at the National Zoo, 3001 Connecticut Avenue, NW, Washington, DC.
Forest City SEFC LLC	DC#13-013	Construction of piers in the Anacostia River at 10 Water Street, SE, Washington, District of Columbia (The Yards)
Competitor Group Inc.	DC#13-015	To install temporary recreational plastic piers in the Potomac River, southeast of the intersection of Independence Avenue SW and Ohio Drive SW and northwest of the intersection of Ohio Drive SW and West Basin Drive SW in Washington, DC.
SPAWARSYSCEN-Pacific	DC#12-001	To collect 12 sediment cores to a depth of 2 feet below the bottom substrate to verify an in situ measurement of grain size within the Anacostia River.
GenOn Potomac River, LLC	DC#12-002	To emplace a 5-foot wide by 80-foot long sand bag diversion 10 feet channel ward of the approximate mean high water shoreline for the clean out of outfall pipe.
U.S. EPA, Region III	DC#12-003	Discharges incidental to normal operation of commercial vessels and non-recreational vessels equal to or greater than 79 feet in length. The discharges eligible for coverage under the proposed permit include, but are not limited to, deck wash-down and runoff from routine deck cleaning, bilge water from properly functioning oily water separators, ballast water, and boiler/economizer blow-down.
U.S. EPA, Region III	DC#12-004	Discharges incidental to normal operation of commercial vessels and non-recreational vessels less than 79 feet in length. The discharges eligible for coverage under the proposed permit include, but are not limited to, deck wash-down and runoff from routine deck cleaning, bilge water from properly functioning oily water separators, ballast water, and boiler/economizer blow-down.
PEPCO Holdings, Inc, Buzzard Point Utility Line	DC-11-014	Authorization to install a probe at three locations to collect data on ambient temperature and thermal resistivity and to collect three jars, approximately quart size, of sediments from the probed areas within the Anacostia River at Buzzard Point near the intersection of V Street and 1 st Street, SW, Washington, DC.

Permittee	Certification Number	Project Description
Charles Brodsky, Nation's Triathlon	DC-11-015	Authorization to put buoys and temporary piers in the Potomac River for the Nation's Triathlon.
District of Columbia Water and Sewer Authority (DC WASA)	DC-11-016:	Authorization to construct outfall structures as part of the Long Term CSO Control Plan.
District of Columbia Water and Sewer Authority (DC WASA)	DC-11-017	Authorization to replace, lower, and remove sewers at three locations in Watts Branch in northeast quadrant of Washington, D.C
Fort Lincoln Retail, LLC	DC-11-018	Authorization to impact approximately 33,503 square feet (sf) (0.77 acre) and 12,680 sf (0.28 acre) of nontidal wetlands and 1,160 linear feet of tributaries to construct a retail shopping center, in the northeast quadrant of Washington, DC.
District Department of Transportation (DDOT)	DC-11-019	Authorization to rehabilitate the existing Northbound and Southbound 14 th Street Bridges over the Potomac River, Washington, DC.
CSX Transportation /BENNING YARD	DC-11-020	Authorization to conduct analytical sediment sampling in Fort DuPont Creek and the Anacostia River along CSX Benning Yard in Washington, DC.
DC WASA	DC-11-021	Authorization to remove existing piles, install pile dolphins or stainless steel cables in the Anacostia River at 1505 M Street, SE in Washington, DC.

Nonpoint Source Control Program

The District has shown that urban runoff is one of the more important contributors to surface water impairment. A process to rank watersheds for nonpoint source implementation in the District, conducted by the Nonpoint Source Management Program in 1993, determined that the Anacostia River and its tributaries should receive the highest priority. The control of nonpoint source pollution requires the cooperation of many environmental programs. In 1989, the WPD developed The District of Columbia Nonpoint Source Management Plan (NSMP), (D.C., 1989). The NSMP describes the various environmental programs and projects in place to help control nonpoint source pollution. It was the first step by the District to develop a Nonpoint Source Management Program. Since its inception, it has grown and has become institutionalized into a branch within the WPD. The Nonpoint Source Management Program revised its Nonpoint Source Management Plan in FY 2000 to reflect the changes in program activities that had taken place over the previous 10 years and to prioritize future strategies.

Environmental pollution from nonpoint sources occurs when water moving over land picks up pollutants such as sediment, bacteria, nutrients, and toxics and carries them to nearby waters. Sediment and pollutant-laden water can pose a threat to public health. The pollutants may come

from both natural sources and human activity. Stormwater runoff and associated soil erosion are significant causes of lost natural habitat and poor water quality in the District and throughout the United States. EPA and the United States Department of Agriculture (USDA) have made the control of soil erosion and the treatment of stormwater runoff important pieces in their strategy to restore the quality of the nation's waters. Nonpoint source pollutants of concern in the District of Columbia are nutrients, sediment, toxicants, pathogens, and oil and grease.

For the District, the origins of nonpoint pollutants are diverse and include:

- Stormwater runoff due to the high degree of imperviousness of urban areas;
- Development and redevelopment activities;
- Urbanization of surrounding jurisdictions; and
- Agricultural activities upstream in the watershed.

The District also sees itself as a champion in watershed protection and environmental justice by increasing stakeholder awareness and involvement in the clean-up efforts in the Anacostia River, Chesapeake Bay, and other neighborhood watersheds and equipping District residents with the knowledge and tools on how to prevent pollution from entering their neighborhood streams.

There are three branches within WPD:

- Planning and Restoration Branch
- Technical Services Branch
- Inspection and Enforcement Branch

WPD is primarily responsible for managing both the District's Nonpoint Source Management (§319(h)) and Chesapeake Bay Implementation (§117(b)) programs. Both the §319(h) and Bay Programs are non-regulatory programs that strive to achieve the same results. Included under the auspices of the Planning and Restoration Branch are tree plantings and riparian buffer restoration projects.

The District employs both regulatory and non-regulatory approaches to reach its nonpoint source milestones. WPD programs that fall under regulation and enforcement include the:

- Stormwater Management Program
- Soil Erosion and Sediment Control Program
- Floodplain Management Program
- Compliance and Enforcement Program

These programs aim to ensure that any development or construction activities occurring within the District properly control potential erosion or runoff from their sites and properly adhere to all federal and city laws relating to floodplains and waterways. In addition, these programs ensure that best management practices (BMPs) are installed correctly and receive appropriate maintenance and upkeep. Non-regulatory programs include:

- Wetland and river habitat creation and restoration programs;
- Use of low impact development (LID) innovative BMP technology;
- Education and outreach programs;
- Pollution prevention programs; and
- Use of sustainable practices.

Through these non-regulatory programs, the District educates community members about nonpoint source pollution and how their actions contribute to it, with the ultimate goal of changing personal behavior for an effective long-term solution. Additionally, the District tests and develops innovative approaches to urban nonpoint source pollution reduction, increases acceptance and implementation of LID, and provides support and financial incentives for citizens wishing to implement LID and pollution prevention techniques.

The District also develops partnerships and collaborations to address the issue of nonpoint source pollution. In recent years, the District has worked closely with federal agencies to ensure that nonpoint source pollution prevention is addressed on both District and federal lands.

Overall, the nonpoint source management strategy attempts to heighten the awareness and stimulate the actions of individuals and communities, elected leaders and agency heads; to concentrate activities on targeted tributaries; and to strictly enforce regulations that protect the District's water quality and natural resources. The District does not shoulder the entire load, but rather enlists assistance from many stakeholders and partners, in an effort to deliver clean water and healthy watersheds to the citizens of the District and its visitors.

Environmental pollution from nonpoint sources occurs when water moving over land picks up pollutants such as sediment, bacteria, nutrients, and toxics and carries them to nearby waters. Sediment and pollutant-laden water can pose a threat to public health. The pollutants may come from both natural sources and human activity. Stormwater runoff and associated soil erosion are significant causes of lost natural habitat and poor water quality in the District and throughout the United States. EPA and the United States Department of Agriculture (USDA) have made the control of soil erosion and the treatment of stormwater runoff important pieces in their strategy to restore the quality of the nation's waters. Nonpoint source pollutants of concern in the District of Columbia are nutrients, sediment, toxicants, pathogens, and oil and grease.

Regulatory Management Update

The District employs both regulatory and non-regulatory approaches to reach its nonpoint source milestones. The Branches within WPD responsible for regulatory management of sediment and stormwater runoff are the Sediment and Stormwater Technical Services Branch and the Inspection and Enforcement Branch.

The branches aim to ensure that any development or construction activities occurring within the District properly control potential erosion or runoff from their sites and properly adhere to all federal and District laws relating to floodplains and waterways. In addition, they ensure BMPs are installed correctly and receive appropriate maintenance.

A. Sediment and Stormwater Technical Services Branch

The Sediment and Stormwater Technical Services Branch reviews construction and grading plans for stormwater management, erosion and sediment control, and flood plain management considerations. As required by EPA regulations regarding new construction permits, all new construction in the District must have Storm Water Pollution Prevention Plans (SWPPPS) that "identify all potential sources of pollution which may reasonably be expected to affect the quality of stormwater discharges from the construction site."

The District's erosion and sediment control regulations require an erosion and sediment control permit for any land disturbance over 50 sf. In comparison, other jurisdictions require that these permits be filed when more than 5,000 sf of soil are disturbed.

Furthermore, DDOE published revised stormwater and erosion/sediment control regulations in July 2013. The revised regulations reflect a change in the District's approach to stormwater management that parallels the most recent scientific findings, the direction of the EPA and the actions of surrounding jurisdictions. The changes aim to encourage better stormwater management through LID practices and stormwater reuse. While earlier research focused on controlling the rate of stormwater runoff most recent finding say preventing runoff is the best way to preserve and restore our streams and rivers and avoid over burdening the public infrastructure. The new regulations require an on-site retention standard for all development and redevelopment that disturbs more than 5,000 sf of land. DDOE also published a new Stormwater Guidebook and a new civil infraction schedule of fines to accompany the revised regulations.

Between 2012 and 2013, the Sediment and Stormwater Technical Services Branch accomplished the following:

- Reviewed 4400 building permit applications and plans for regulatory compliance;
- Processed 60 Environmental Impact Screening Forms (EISFs) after they were reviewed for regulatory compliance; and

- Provided 8500 customers with technical assistance.

In addition to these regulatory actions, engineers from the Technical Services Branch regularly attend relevant trainings on new stormwater technologies. They also attend regional workshops related to stormwater control and Chesapeake Bay restoration efforts.

B. Inspection and Enforcement Branch

The District's Inspection and Enforcement Branch inspects construction sites throughout the District to make sure they are in compliance with District regulations. DDOE regularly inspects existing stormwater management facilities to ensure that they are in proper working order. It also inspects BMPs to ensure they are adequately maintained. In addition, the Inspection and Enforcement Branch is responsible for investigating citizen complaints relating to soil erosion and drainage problems, and recommending appropriate solutions.

DDOE also performs outreach to industrial and construction facilities through workshops, brochures, and site inspections. DDOE personnel use inspections to promote awareness of the proper methods of facility maintenance for stormwater regulation compliance. To aid facilities in ensuring proper maintenance of stormwater management facilities, DDOE has established and published guidelines for their proper maintenance.

In FY 2012, the Inspection and Enforcement Branch accomplished the following:

- Conducted 9851 inspections at construction sites for enforcement of erosion and sediment control and stormwater management regulations;
- Executed 177 enforcement actions, including stop-work orders and civil infractions, to strengthen enforcement activities;
- Conducted 149 investigations for erosion, drainage and related complaints;
- Inspected 1199 stormwater management facilities to ensure proper functioning of these facilities; and
- Developed a brochure on proper erosion and sediment control measures to distribute to contractors and developers.

In FY 2013, the Inspection and Enforcement Branch accomplished the following:

- Conducted 7997 inspections at construction sites for enforcement of erosion and sediment control and stormwater management regulations;
- Executed 156 enforcement actions, including stop-work orders and civil infractions, to strengthen enforcement activities;
- Conducted 115 investigations for erosion, drainage and related complaints;

- Inspected 770 stormwater management facilities to ensure proper functioning of these facilities; and
- Revised SOPs for erosion and sediment control inspections, stormwater management facility, construction inspections, and stormwater management facility maintenance inspections.

Non-Regulatory Management Update

Through non-regulatory programs, the District educates community members about nonpoint source pollution and how their actions contribute to it, with the ultimate goal of changing personal behavior for an effective long-term solution. Additionally, the District tests and develops innovative approaches to urban nonpoint source pollution reduction, increases acceptance and implementation of LID, and provides support and financial incentives for citizens wishing to implement LID and pollution prevention techniques.

Planning and Restoration Branch

The Planning and Restoration Branch sponsors and conducts non-regulatory programs and activities that protect and restore river, stream, and wetland habitats in the District and increase the ecological diversity of the District and Chesapeake Bay watersheds. Non-regulatory activities include:

- Wetland and river habitat creation and restoration programs;
- Providing technical advice on the application of LID and innovative BMP technology;
- Administering Request for Proposals to fund LID retrofits;
- Education and outreach programs;
- RiverSmart Rooftops program (Green roof incentive program);
- RiverSmart Homes program;
- RiverSmart Schools program; and
- Pollution prevention programs.

A. Habitat Restoration, LID and Watershed Planning

Green Roof Rebate/Retrofit Program

For the last two years the District has offered a rebate for installation of a new green roof or the retrofit of an existing roof. This program, offered through DDOE, provided \$5 per sf for the installation of a green roof on a new structure or existing roof, provided that the green roof was

constructed to meet existing DDOE stormwater requirements. For 2014, DDOE has raised the rebate amount to \$7 per sq. f for the majority of the city and \$10 per sf for specific targeted watersheds.

Additionally, the city has been aggressively retrofitting its existing rooftops with green roofs and installing vegetated roofs on new city-owned buildings. As a result of this push, Washington, DC has over 2 million sf of installed green roof. In 2013, DDOE accomplished the following:

- Installed green roofs on 2 District buildings, covering 15,960 sf of rooftops.
- Installed a green roof retrofit on a District Maintenance Facility 1 Garage, covering 8960 sf
- Installed a green roof at the Raymond Recreation Center, covering 7000 sf

Stream Restoration

Stream restoration is the act of modifying the current channel of a stream in an attempt to improve the environmental health and habitat of the waterway. Urban streams face immense pressure from high stormwater flows due to runoff from impervious surfaces. The erosion seen in urban streams is the stream's way of adjusting to accommodate the new (geological) flow regime, it is experiencing. Stream restoration attempts to create a new channel that is in stasis with the flows that a stream experiences.

Completed Stream Restoration Projects

Watts Branch Stream Restoration

The Watts Branch Stream Restoration Project was completed in early FY 2012. Since that time DDOE has monitored the project to determine its effectiveness at achieving its design objectives. Similar to other restored stream projects DDOE is using a combination of activities to monitor the restoration project. Restoration monitoring consists of photographic and vegetative surveys, and geomorphic assessments. DDOE previously awarded a grant to the Metropolitan Washington Council of Governments (MWCOG) to monitor macroinvertebrates in Watts Branch pre and post-restoration. In addition, DDOE staff members are presently collecting water quality samples in storm events and comparing the pollution loads with those of the non-restored Oxon Run.

Bingham Run and Milkhouse Ford Regenerative Stormwater Conveyances

DDOE constructed two regenerative stormwater conveyance systems in FY 2011 in first order tributaries of Rock Creek named Bingham Run and Milkhouse Ford. Activities in FY 2012 focused on monitoring the restoration sites to ensure that they functioned as designed, and these activities continued in FY 2013. Monitoring activities included vegetative surveys, photographic

surveys, and geomorphic surveys. Survey work will help DDOE demonstrate the effectiveness and stability of this type of stream restoration technique while accumulating documentation to prove their effectiveness and understand their weakness.

Upcoming Stream Restoration Projects

Broad Branch Daylighting and Stream Restoration

The goal of this project is to daylight a 1,600-foot portion of Broad Branch, a tributary to Rock Creek. Daylighting a stream is the act of restoring to the open air some or all of the flow of a previously covered creek, or stormwater drainage. Daylighting this section of the Rock Creek watershed will improve water quality at the location and downstream water quality by exposing water to sunlight, air, soil, and vegetation, all of which help process and remove pollutants. Furthermore its restoration will reduce nutrient and sediment pollution from erosion caused by fast flowing stormwater by creating meanders and floodplain wetlands which will have wider cross-section and a greater channel depth than the pipe it will replace. Additional surface flow from adjacent streets and rooftops may be able to be directed to the area by creating curb cuts and redirecting storm sewers to the area, further slowing, cooling, and filtering stormwater in the subwatershed.

Linnean Park and Linnean Gully Stream Restorations

In FY 2014, DDOE plans to install Regenerative Stream Channel (RSC) systems to restore 1,050 linear feet of in-stream habitat in two Rock Creek tributaries. The first tributary is a steep gully created by water running directly off the end of Linnean Avenue in upper Northwest leaving exposed a tangle of a sanitary sewer pipe, storm sewer pipe, and a water main. The contributing watershed is 8.6 acres of urban residential neighborhood containing 31% impervious surfaces and highly-managed landscaping. The second location is about a mile in the northwest direction; forested land that surrounds a perennial stream. This waterway is fed by one storm sewer outfall that conveys stormwater runoff from 24.5 acres of urban residential properties. Nitrogen, phosphorous and pesticide pollution are likely to be high in both project areas due to intensive landscaping. In December 2014, DDOE and its subgrantee completed restoration designs and submitted them to municipal and federal permitting agencies for their review and approval. In January 2013, The University of Maryland, Center for Environmental Science, Chesapeake Biological Laboratory began pre-installation monitoring for concentrations of nutrients, sediments, metals, bacteria, flow volume and velocity, water temperature and habitat health. DDOE staff will perform photo surveys to document RSC system stability over time. This project uses a paired monitoring approach, studying the same set of parameters in Spring Valley, a stream and watershed of similar character that will not be restored in the near-term. Monitoring is scheduled for one year before the stream is restored and at least one year afterward, but will continue as long as necessary to meet the requirements of our restoration

permit. This schedule allows researchers to compare the results and determine whether or not the RSC improves wildlife habitat and water quality as expected.

Nash Run Stream Restoration

In FY 2013, DDOE and its contractor neared completion on designs for a 1400 linear foot stretch of restoration work on Nash Run, a tributary of the Anacostia River. The project will include an upstream floatable trash trap and will utilize floodplain reconnection design to create a 55ft wide low floodplain bench along the stream corridor. The project will also include an enlarged mid-reach culvert to minimize flood risk and increase likelihood of fish passage to the upper portion of the restored reach.

The Nash Run restoration project is expected to commence in FY 2014. The restoration project will reduce bank erosion, improve stream connectivity to its floodplain, increase the riparian cover along the stream, add wetland area to the stream corridor, and significantly reduce trash and debris in the Anacostia River.

Pope Branch Sewer Line Rehab & Stream Restoration

In August 2013, DC Water began moving forward with the initial phase of this restoration project by repairing and replacing portions of the sewer line that runs through Pope Branch's stream valley. Sewer line repair work will be completed in 2013. The stream restoration work will begin in 2014. Stream restoration work will connect the stream to its historic floodplain level and create a series of pools and riffles throughout the corridor ensuring that high flow events spread out on the floodplain.

Alger Park Stream Restoration

In FY 2013, DDOE completed a conceptual design project for a stream restoration and upland LID project for a subwatershed of the Texas Avenue tributary, a stream in the Anacostia River watershed. This project aims to restore a 1,540 feet stretch of one of the most degraded stream valleys in the District through a comprehensive approach to managing stormwater upland and restoring the receiving waterbody to a state of improved water quality, bank stability, and enhanced habitat features.

In the coming years, DDOE plans to work to maximize installation of LID practices on private properties throughout the watershed through the RiverSmart Homes program.

Springhouse Run Stream Restoration

Springhouse Run is a remnant of one of the original tributaries to Hickey Run, a tributary of the Anacostia River, with a drainage area of approximately 100 acres. The majority of the tributary

is stable, although it is highly altered and armored in most areas. The armoring has resulted in a stream with poor habitat value and very limited ability to trap sediment and uptake nutrients.

WPD is coordinating the design of stream and habitat restoration for Springhouse Run. The stream will be reconnected to its historic floodplain and its sinuosity will be restored. This project reach measures approximately 1,600 feet in length and lies entirely within the U.S. National Arboretum. In FY 2012, in collaboration with the National Arboretum, DDOE expanded the scope of the project to include additional stream sections in the upstream portion of the project reach.

An additional component of this project is to construct bioretention facilities in the parking areas near the Arboretum Visitor Center. This project is being funded in part with EPA 319 funds. DDOE expects the project to commence in late FY 2014 and it will be completed in FY 2015.

B. Environmental Education and Outreach

WPD sponsors and conducts environmental education and outreach activities targeted to teachers, environmental educators and students throughout the District. These programs and resources include the following:

Environmental Education Resource Center – This center provides resources and materials that teachers and other environmental educators may use to enhance the classroom curriculum and implement conservation projects.

- 10 teachers and organizations received 220 educational resources, maps, posters, and other materials for distribution to other District teachers and students.

Conservation Education Programs (Project Learning Tree, Project WET, and Project WILD) – These internationally recognized programs are utilized to train educators in innovative techniques for exploring a wide range of environmental concepts with students and teaching critical thinking skills that lead to environmental stewardship for grades K-12.

- In 2012, DDOE provided Project Learning Tree PreK-8 grade Training to 18 DPR staff and 16 teachers from St Columba's Nursery School with Early Childhood Experiences training.
- In 2013, DDOE provided 12 Department of Parks and Recreation (DPR) staff and 9 Student Conservation Association staff with Project Learning Tree PreK-8 grade Curriculum training. Additionally, DDOE provided 17 DPR staff with training in the Early Childhood Experiences curriculum.

Teacher Training Workshops – Teacher-training workshops in environmental education, provide teachers with continuing education credits through accredited environmental curriculums that support the District of Columbia Public Schools (DCPS) teaching and learning standards and provide students with meaningful environmental education experiences via outdoor activities and events.

- During 2012, in partnership with members of the DC Environmental Education Consortium, DDOE trained 40 teachers during the DCPS Professional Development Days. In 2013, DDOE and partners worked with 20 teachers during two DCPS Professional Development Days.

In FY 2012 and FY 2013, WPD accomplished the following:

- Provided 72 teachers with an 8-day workshop on RiverSmart schools site usage and programming.
- Conducted 46 classroom visits and provided 8 boat trips to support integration of watershed lessons for the RiverSmart Schools project at each participating school.
- Engaged students, teachers, and volunteers in Community Work Days to construct and maintain Schoolyard Conservation Sites. 400 students from nine (9) schools participate in 32 Community Work Days.

Additionally, WPD completed the construction of RiverSmart Schools projects (see Table 2.6). Some highlights of these projects are:

For FY 2012:

Elsie Whitlow Stokes Public Charter School

- Retrofitted 7,000 sf of impervious parking with permeable pavement.
- Installed a trench drain system to convey stormwater runoff from another impervious parking area. The system is an underground 24 inch diameter perforated pipe where it infiltrates into the soil.
- Completed an outdoor classroom on the southern side of the campus with seating for 30 students.

Hardy Middle School

- Installed a cistern that captures stormwater runoff from an adjacent roadway and then conveys it to a stormwater wetland.
- Performed invasive plant removal on the hillside of the school and planted over 300 species of native and wetland plants and shrubs.
- Provided students in 6th and 7th grades with lessons about their local environment and watershed and engaged students in wetland planting activities.

Benjamin Banneker High School

- Constructed two bioretention planters to capture the first 1.2 inches of stormwater runoff from areas of the school rooftop that drain to a central courtyard.
- Installed built-in seating for students using the courtyard.

Kelly Miller Middle School

- Completed an outdoor classroom area. Twenty volunteers assisted in the installation and maintenance of a pollinator garden and an edible forest garden.
- Engaged volunteers on DCPS Beautification Day to conduct basic maintenance/weeding of the garden to prepare the outdoor classroom for the upcoming school year.

Walker Jones Education Campus

- Constructed a 45' x 12' covered outdoor classroom and installed a 1,300 gallon cistern.
- Educated more than 250 students about rainwater harvesting since the cistern was installed.

For FY 2013:

Phelps Architecture, Construction, and Engineering High School

- Retrofitted 1,086 sf of impervious parking with bioretention system.
- The bioretention system was able to treat 18,300 sf of drainage area that meets the 1.2" rain fall requirement.
- Completed three (3) community action days with students and teachers to vegetate the rain gardens.
- Conducted four (4) classroom visits and provided two (2) boat trips on the Anacostia River.

SEED School

- Installed a 500 gallons cistern that captures stormwater runoff from the student dormitory building that would direct collected runoff to the rain garden.
- Retrofitted 940 sf of compacted courtyard with a bioretention system.
- The bioretention system was able to treat 11,300 sf of drainage area that meets the 1.2" rain fall requirement.
- Constructed an outdoor classroom seating area for a classroom of 15 students.
- Completed two (2) community action days, conducted four (4) classroom visits, and provided two (2) boat trips on the Anacostia River.

H.D. Cooke Elementary School

- Stabilized eroded hill by the playground area with native plantings and vertical gardening.

- Expanded the raised bed gardens.
- Completed two (2) community action days, conducted three (3) classroom visits, and provided two (2) boat trips on the Anacostia River.

DuPont Park Adventist School

- Constructed a French drain trench with a 6 inches drain pipe under stones to direct water off walkway, along fence to lawn area.
- Installed a pollinator garden after amending the compacted soil.
- Constructed two (2) outdoor classroom seating areas for 30 pre-school students by using logs and tree stumps in circles
- Completed three (3) community action days where students plant natives and landscape plants along the fence area. Conducted four (4) classroom visits and provided two (2) boat trips for two classes on the Anacostia River.

Phelps Architecture, Construction, and Engineering High School	5	704 26th Street, NE. Washington, DC 20002	Anacostia River	MS4	Retrofitted 1,086 sf of impervious parking with bioretention system that is able to treat 18,300 sf of drainage area that meets the 1.2" rain fall requirement.
SEED School	7	4300 C Street, SE. Washington, DC 20019	Anacostia River	MS4	Retrofitted 940 sf of compacted courtyard with a bioretention system that was able to treat 11,300 sf of drainage area that meets the 1.2" rain fall requirement.
H.D. Cooke	1	2525 17th Street, NW Washington, DC 20009	Anacostia River	CSO	Stabilized eroded hill by the playground area with native plantings and vertical gardening.
Dupont Park	7	3942 Alabama Ave, SE Washington, DC 20020	Anacostia River	MS4	Constructed a French drain trench with a 6 inches drain pipe under stones to direct water off walkway, along fence to lawn area.
2012 Schools					Practices
Name	Ward	Address	Watershed	Sewer System	

Elsie W. Stokes Community Freedom PCS	5	3700 Oakview Terr, NE. Washington, DC 20017	Anacostia River	MS4	Retrofitted 7,000 sf of impervious parking with permeable pavement.
Hardy Middle School	2	1819 35th Street, NW. Washington, DC 20010	Rock Creek	CSO	Installed a cistern that captures stormwater runoff from an adjacent roadway and then conveys it to a stormwater wetland.
Walker Jones Education Campus	6	1125 New Jersey Ave, NW Washington, DC 20001	Anacostia River	CSO	Constructed a 45' x 12' covered outdoor classroom and installed a 1,300 gallon cistern.
Kelly Miller Middle School	7	301 49th Street, NE. Washington, DC 20019	Anacostia River	MS4	Completed an outdoor classroom area. Twenty volunteers assisted in the installation and maintenance of a pollinator garden and an edible forest garden.
Benjamin Banneker High School	1	800 Euclid Street, NW. Washington, DC 20001	Anacostia River	CSO	Installation a flow-through, bioretention planter in the west courtyard and a 500 gallon cistern.

The District of Columbia Environmental Education Consortium (DCEEC) – DDOE helps to organize a network of environmental educators throughout the city so that ideas and resources can be shared. DCEEC provides opportunities for networking, event coordination and program partnering among its members. The members provide environmental expertise, professional development opportunities, curricula and resources, and hands-on classroom and field studies to District schools.

- In the Healthy Schools Act legislation, DDOE is tasked to develop an Environmental Literacy Plan (ELP) with other District agencies (Office of the State Superintendent, District of Columbia Public Schools (DCPS), and DPR) and stakeholders. DDOE and DCEEC worked with the other District agencies and stakeholders to develop the ELP and submit it to the Mayor and DC Council on July 2, 2012. In March 2013, DCEEC organized a Greening STEM workshop, which brought together District government environmental professionals, nonprofit environmental educators, and teachers, to brainstorm how environmental content can be integrated into school-based lessons in the areas of science, technology, engineering, and math. With a grant from DDOE, DCEEC has identified eight Sustainable DC Model Schools, and is working to develop an environmental literacy framework and further implement the DC Environmental Literacy Plan.

The Anacostia Environmental Youth Summit (formerly Anacostia River Environmental Education Fair) - This annual outdoor event is a city-wide showcase that spotlights youth's voices, demonstrates environmental literacy, and encourages stewardship the Anacostia and Potomac Rivers, and the Chesapeake Bay. By encouraging an ethic of stewardship and

responsible action, the Anacostia Environmental Youth Summit emphasizes youth leadership and innovation.

- The Anacostia Fair took place on Friday, May 4, 2012. Nine DCPS schools, 37 teachers, 365 students, and 17 exhibitors were a part of the event. Students took part in activities on and off the water and learned about human behaviors and the connections between the health of their watersheds and the Bay.
- The Anacostia Fair on Friday, May 31, 2013. Ten DCPS, 428 students, and 22 exhibitors were a part of the event. Students took part in activities on and off the water and learned about human behaviors and the connections between the health of their watersheds and the Bay.

Meaningful Watershed Educational Experiences (MWEEs):

- Alice Ferguson Foundation (AFF), with DDOE funding, provided Trash-Focused MWEE for Third-Fifth graders at Burville Elementary School (ES) (114 students), Houston ES (68 students), Kimball ES (39 students), Anne Beers ES (116 students), and Aiton ES (52 students). They provided 389 MWEE hours.
- The Anacostia Watershed Society (AWS), with DDOE funding, successfully provided 120 students with field experiences on the Anacostia River as well as restoration experiences that will impact their local watershed and the Chesapeake Bay.
- DDOE/WPD provided Living Classrooms of the National Capital Region with a grant to work with all of the 3rd, 4th, and 5th grade classes at two schools, River Terrace ES (40 students) and Kimball ES (90 students). They provided 398 MWEE hours and 20 hours of follow-up for 913 4th and 5th grade students.
- WPD conducted a Watershed Aquatics Environmental Education Camp - July 15-26, 2012 and July 22-26, 2013, at Neval Thomas Elementary School with FWD. A total of 64 campers and youth summer workers participated from 9 am to 2 pm, daily. The following topics were covered: Introduction to Watershed and Aquatics, Fish Habitat and Fishing, Wetlands, and Native Plants. A boat tour on the Anacostia River was provided.

C. Pollution Prevention

RiverSmart Homes Program

Over the past three years, DDOE has developed a LID retrofit program aimed at single family homes. The program started with eight demonstration sites – one in each Ward of the city. It then expanded to a pilot program in the Pope Branch watershed of the city. The program is now available city-wide.

Through this program, DDOE performs audits of homeowner's properties and provides feedback to the homeowners on what LID technologies can be safely installed on the property. The city also offers up to \$2,600 to the homeowner to help cover the cost of installation of any LID technology the homeowner chooses. Currently, the program offers five different landscaping items including shade trees, native landscaping to replace grass, rain gardens, rain barrels and permeable pavement.

The District has recognized the importance of targeting homeowners for pollution reduction measures because the residential property is the largest single land use in the city and is the slowest of all construction areas to be redeveloped. 2012-2013 accomplishments include the following:

- Conducted 2,050 audits
- Provided District residents with 1,515 rain barrels
- Planted 1,263 shade trees
- Installed 290 rain gardens
- Implemented Bay Scaping at 349 properties
- Replaced impervious surfaces with green space or pervious pavers at 58 properties

Tree Planting

The District of Columbia has been called "The City of Trees." It has a tree canopy cover of 35 percent, which is high for a dense urban environment, but is lower than the canopy cover has been historically – even when the city had a higher population density. In an effort to improve air and water quality, reduce the urban heat island effect, and offset greenhouse gas emissions, the city has adopted a 40 percent tree canopy goal. Currently, DDOE and the Urban Forestry Administration (UFA) are drafting an Urban Tree Canopy Plan that lays out concrete actions to achieve the canopy goal. The plan projects that we will need a 25 percent increase in tree planting over current efforts will be needed to achieve this goal. Currently, UFA, which maintains the city's street trees, plants an average of 4,150 trees annually.

DDOE, with help from non-profit partners such as Casey Trees and Washington Parks and People, plants trees on private, federal, and other District lands. DDOE and its partners planting efforts added 2,476 trees to the District in 2010. Through non-profit partnerships, 5,133 trees were planted in 2011. 2010 accomplishments included the following:

- Planted 252 trees in the Watts Branch sub-watershed through an upland tree-planting grant to plant 600 trees in the watershed.
- Planted 531 trees as part of the RiverSmart Homes Program

- Planted 12 trees at RiverSmart Schools
- Planted 663 trees through tree rebates funded by the 319 grant program
- Planted 418 trees through community tree planting (Casey Trees funded)

Trash Removal

The District’s MS4 Permit requires the District to reduce trash into the MS4 by 103,188 lb annually, by January 22, 2017. In addition, Section 4.10 of the MS4 Permit requires the District to submit a trash reduction calculation methodology with the 2013 Annual Report to EPA for review and approval. The methodology was submitted to the EPA with the 2012 MS4 Annual Report, dated January 22, 2013.

Since the start of the Permit term, DDOE has removed a total of 177,819 pounds of trash, see Tables 2.7 and 2.8. DDOE is implementing the following trash reduction tools:

- In-stream and end-of-pipe BMPs (e.g. trash traps);
- Stream clean-up activities;
- Street sweeping environmental hotspots;
- Education and outreach; and
- Regulatory approaches (e.g. Bag Fee).

As required by the MS4 permit, DDOE released a draft Anacostia River trash TMDL implementation strategy to local stakeholders for an informal public input period. The informal public input period for the draft strategy was December 19th, 2013 to January 31st, 2014.

**TABLE 2.7
2012 TRASH LOAD REDUCTIONS**

Activity Category	Activity	Load Reduction (lbs)	Calculation Methodology
End-of-Pipe and In-Stream BMPs	Watts Branch Bandalongs	4,143	Based on empirical data collected. Data for the lower Watts Branch Bandalong was collected between January & September 2012. Data on the upper Watts Bandalong was collected between December 2011 and November 2012.
	Nash Run Trash Trap	1,894	Annual average (2009–2012) based on empirical data.
	Hickey Run BMP	2,000	Based on assumed efficiency of 100 percent capture for design capture of device. A reduction factor of 20 percent is then applied since glass and plastic bottles may not be emptied of water.
	James Creek Bandalong	327	Based on empirical data collected.

Activity Category	Activity	Load Reduction (lbs)	Calculation Methodology
Roadway and Block Cleanups	Adopt-A-Block Program	NA	Collaborating with Office of the Clean City to collect empirical clean-up data.
Sweeping Environmental Hotspots	Sweeping Environmental Hotspots	72,384	Total amount of trash removed was estimated based on trash loading coefficients for roadways. The trash load was then multiplied by the total area of roadways swept within the environmental hotspots. The resulting load was then divided by two because roughly half of the roadway (the middle of the road) is swept in these areas because they are unsigned. Environmental hotspots within the Anacostia watershed are swept twice per month, 8 months out of the year, in addition to other signed and unsigned areas throughout the MS4 area. Total amount of trash calculated using the methodology above is multiplied by 16. A reduction factor of 50 percent is then applied since an entire hotspot may not be swept during each sweeping event.
Clean-Up Activities	Clean-Up Events	3,825	Based on empirical data collected (see additional table for tracking of each clean-up event) during the 2012 Anacostia Watershed Society Earth Day Clean-Up. A reduction factor of 50.8 percent is first applied, which accounts for the District's portion of the Anacostia being served by the MS4. A second reduction factor of 20 percent is applied to account for the fact that not all plastic and glass bottles collected may be emptied of water before trash is weighed.
	Skimmer Boats	5,877	Total amount of trash and debris removed is multiplied by 16.5 percent, since this represents the proportion of the watershed which lies within DC. A second reduction factor of 50.8 percent is applied to account for the area of the District's portion of the watershed served by the MS4. A third reduction factor of 50 percent is applied since not all material collected by the skimmer boats may be trash. Finally, a fourth reduction factor of 20 percent is applied since not all plastic and glass bottles collected are emptied of water.
Education and Outreach	Watershed Wide Anacostia Campaign	NA	Efficiency being assessed.
	Trash MEWEEs	NA	Efficiency being assessed.
Regulatory Approaches	Bag Law	NA	Efficiency being assessed.
Total		90,450	

**TABLE 2.8
2013 TRASH LOAD REDUCTIONS**

Activity Category	Activity	Amount of Trash Removed (pounds)	Annual Load Reduction (pounds)	Calculation Methodology
Trash Traps	Marvin Gaye Park Bandalong	1,935	39	Annual average taken from empirical data collected between December 2011 & November 2013. The average amount of trash collected during this time period is multiplied by 2% since that is the approximate proportion of the Watts Branch watershed which lies within District and drains to the trash trap.
	Kenilworth Bandalong	3,329	3,329	Annual average taken from empirical data collected between January 2012 and November 2013. No reduction factors are being applied since the entire drainage area above this trap lies within the District.
	Nash Run Trash Trap	2,061	1,546	Annual average taken from empirical data collected between 2009 and 2013. The total amount collected is then multiplied by 75% since that is the approximate proportion of the Nash Run watershed that lies within the District and drains to the trash trap.
	Hickey Run BMP	10,000	2,000	Based on assumed efficiency of 100 percent design capture of device. A reduction factor of 20 percent was applied since glass and plastic bottles may not have been emptied of water.
	James Creek Bandalong	263	263	Annual average taken from empirical data collected between January 2012 and November 2013. No reduction factors have been applied since the entire drainage area for this

Activity Category	Activity	Amount of Trash Removed (pounds)	Annual Load Reduction (pounds)	Calculation Methodology
				practice lies within the District.
	Earth Conservation Corps Trash Booms	100	100	Amount collected from trap in 2013. No reduction factors have been applied since the entire drainage area for this practice lies within the District.
Roadway and Block Cleanups	Adopt-A-Block Program	NA	NA	Collaborating with Office of the Clean City to collect empirical cleanup data.
Sweeping Environmental Hotspots	Sweeping Environmental Hotspots	144,768	72,384	The total area of roadways within the environmental hotspots (e.g. blocks found to contain high trash amounts) ¹ was calculated. That area was then multiplied by 50% because roughly half of the roadway (the middle of the road) is swept in these areas because they are unsigned. That area is then multiplied by the trash loading coefficient of 31.12 lbs/acre developed for the TMDL. That total mass in pounds is then multiplied by 16 since the DC Department of Public Works (DPW) is supposed to sweep environmental hotspots (i.e. blocks with high amounts of trash) twice per month, 8 months out of the year. That result is then multiplied by 50% because not all hotspots may always be swept.

¹ - The environmental hotspots which are swept differ from the "hotspot" sewersheds mentioned earlier. The environmental hotspots swept represent a series of blocks found to contain very high amounts of trash.

Activity Category	Activity	Amount of Trash Removed (pounds)	Annual Load Reduction (pounds)	Calculation Methodology
Clean-Up Activities	Clean-Up Events	33,577	563	Based on empirical data collected during the 2013 Alice Ferguson Foundation Potomac Watershed Wide Cleanup (Anacostia watershed sites) and the 2013 Anacostia Watershed Society Earth Day Clean-Up. A reduction factor of 16.5% is applied since this the proportion of the Anacostia watershed which lies within the District. A second reduction factor of 50.8 % is applied to account for the District's portion of the Anacostia served by the MS4. A third reduction factor of 20% is applied to account for the fact that not all plastic and glass bottles collected may have been emptied of water before bagged.
	Skimmer Boats	820,000	6,873	Based on the total amount of material collected by DC Water skimmer boats in 2013. The total amount is first multiplied by 16.5 %, which represents the proportion of the watershed that lies within the District. A second reduction factor of 50.8 % was applied to account for the area of the District's portion of the watershed served by the MS4. A third reduction factor of 50 % was applied since not all material collected by the skimmer boats may have been trash. Finally, a fourth reduction factor of 20 percent was applied since not all plastic

Activity Category	Activity	Amount of Trash Removed (pounds)	Annual Load Reduction (pounds)	Calculation Methodology
				and glass bottles collected were emptied of water.
Education and Outreach	Watershed Wide Anacostia Campaign	NA	NA	Efficiency being assessed.
	Trash MWEEs	NA	NA	Efficiency being assessed.
Regulatory Approaches	Bag Law	1,072	272	DDOE currently estimates (based on data collected for the development of the Anacostia Watershed Trash Reduction Plan) that there are 82,431 bags in the river and tributaries. This amount is first multiplied by 50.8%, since this is the proportion of the Anacostia River served by the MS4. The amount is then reduced by 50% because according to a recent survey report, 50% of businesses in the District report a 50% reduction in bag purchases. Finally, the total number of bags is then multiplied by 0.013 lbs, which is the standard weight for a plastic bag.
Total (pounds)		1,017,105	87,369	

Outreach and Education on Pet Wastes/Enforcement of Pet Waste Regulations

DDOE oversees the environmental inspection of any DPR parks that are proposed to be converted for dog parks with DPR via Chapter 7 of Title 19 (Amusements, Parks and Recreation) (June 2001) of the District of Columbia Municipal Regulations. The components that must be in

compliance include the following elements, and each/every park must meet all criteria in order to be eligible for conversion.

- (a) A dog park should be located on well-drained land to prevent soil erosion with a maximum slope of 20%;
- (b) A dog park should sit at least 50 feet from surface waters that drain into the Potomac and Anacostia Rivers and Rock Creek;
- (c) A dog park should be located near a water supply line for drinking-fountain and maintenance purposes; and
- (d) A dog park should have a surface type that allows for positive drainage away from the site and that helps mitigate waste management issues.

A member of the Stormwater Management Division conducts multiple visits (with DOH and DPR, and DPW) to nominated sites, before conversion or approval is conveyed. Ultimately, DPR Director must make the final determination based on the suggestion of the DPARC (Dog Park Application and Review Committee).

DDOE also purchased and distributes thousands of instructional pamphlets/flyers at all media/public events throughout all 8 Wards. DDOE also work closely with DPW and DDOT to install heavy metal “pick up pet waste signs: it’s the law” all over the city. Over 100 signs have been installed with another 100 waiting to be installed. These signs have impact as indicated by calls to 311.

Integrated Pest Management and Nutrient Management

DDOE has developed an education and outreach program on Integrated Pest Management (IPM) and Nutrient Management. The purpose of the program is to better inform the public on the proper use and disposal of pesticides and on the use of safer alternatives. The program provides education and outreach activities designed to property owners and managers about environmentally sound practices with regard to the use of pesticides in the yard or garden and the introduction of “good” pests into the landscape. Through DDOE’s Nutrient Management Program, the property owners receive education regarding the proper amount of fertilizer to use on a lawn. In addition to fertilizer use, this program addresses the proper way to mow, the proper use of mulch, and the effects of applying too much mulch.

DDOE Pesticide Management Program trains commercial applicators in the legal and safe appliance of pesticides and herbicides. Commercial applicators receive a certification through the program to legally apply pesticides and herbicides in the District. A part of the training program involves the use of IPM.

WPD Storm Drain Marker Program

In 2013, the WPD installed 230 storm drain markers throughout the District with private citizens, youth groups, individuals from various volunteer groups and DCPS school groups.

DDOE staff reached out to several District colleges and universities, several community groups and 2 business improvement district organizations within the District. WPD met with Georgetown University, American University, and Howard University to plan student storm drain marking projects. WPD planned projects with NOMA BID and a community group in the Gateway neighborhood. Ultimately, we were able to complete 10 storm drain marking events which installed around 230 markers.

Low Impact Development (LID)

LID is focused on four main practices: cistern installation, establishment of bioretention cells, retrofit of vegetated (green) roofs and installation of pervious pavers.

In FY 2012, DDOE/WPD partnered with the Golden Triangle Business Improvement District (BID) to install a bioretention cell at a busy downtown intersection (the corner of Connecticut Avenue, NW and Rhode Island Avenue, NW). Although not treating large stormwater volumes, the project has been a huge success from a public education standpoint. Furthermore this demonstration project initiated new potential restoration and retrofit partnerships with the various city BIDs.

In FY 2013, DDOE/WPD partnered with the Golden Triangle Business Improvement District (BID), again, to install four bioretention cells at a busy downtown intersection (the intersection of 19th Street and L Street NW). The bioretention cells treat a large stormwater volume in the public right-of-ways with a huge success from a public education standpoint among visitors and business owners of Golden Triangle. Other projects anticipated for FY 2014 featuring LID retrofits in highly visible localities include the bioretention at the Smithsonian National Zoological Park's Conservation Carousel and 400 sf of permeable pavers at Tifereth Israel Congregation.

D. Nonpoint Source Pollution Watershed Implementation Plans (WIPs)

WPD is responsible for watershed management planning within the District of Columbia. The Division manages these activities in accordance with its mission to conserve the soil and water resources of the District and to protect its watersheds from nonpoint source pollution.

By strengthening its existing programs and continuing to seek innovative solutions for reducing nonpoint source pollution in an urban setting the District continues to move steadily toward reaching the goals outlined in its Nonpoint Source Pollution WIPs.

Tables 2.9 through 2.14 below include and describe the coordinated activities conducted in designated watersheds and sub-watersheds to meet those goals. Table 2.15 lists the estimated pollution abatement for LID projects.

**TABLE 2.9
ROCK CREEK WATERSHED SEPARATED SEWER SYSTEM ACTIVITIES**

Rock Creek Watershed Separated Sewer System Activities					
Activity	Description	Status	Output (quantity)	Partners	Funding
130 gallon rain barrel installations	As part of the RiverSmart Homes program, DC Greenworks installs 130 gallon rain barrels on residential properties.	Completed	238	DC Greenworks	MS4
Shade tree installation	Shade trees are planted as part of the RiverSmart Homes, DDOE tree rebates, street tree planting, and other planting efforts.	Completed	3097	Casey Trees, DDOT	MS4, District Funds
BayScaping installation	As part of the RiverSmart Homes program, BayScaping is installed to replace existing turf.	Completed	46 properties average 120 sf per property	Alliance for the Chesapeake Bay	MS4
Rain Garden installation	As part of the RiverSmart Homes program, rain gardens are installed to replace existing turf.	Completed	42 rain gardens installed average 50 sf per property	Alliance for the Chesapeake Bay	MS4
Permeable pavement installation	As part of the RiverSmart Homes program, permeable pavement is installed to replace impervious surfaces.	Completed	10 permeable pavement retrofits installed averaging 120 sf per property.	Alliance for the Chesapeake Bay	MS4

Number of treatment area for 2012-2013 (acres):					201.5

Stormwater Management and Sediment Control Regulatory Programs

Along with its voluntary activities to control nonpoint source pollution through its Nonpoint Source Management and Chesapeake Bay Implementation programs, WPD also supports activities to regulate land-disturbing and substantial-improvement activities for stormwater management and erosion/sediment control. WPD's major regulatory actions in the area of nonpoint source pollution control include enforcing the provisions of the following:

- District of Columbia Erosion and Sedimentation Control Act of 1977, D.C. Law 2-23;
- Erosion and Sedimentation Control Amendment Act of 1994, D.C. Official Code § 6-1403(c);
- District of Columbia Water Pollution Control Act of 1984, D.C. Official § Code 8-103.01 et seq; and
- Stormwater Management Regulations – Chapter 5 of Title 21 of the District of Columbia Municipal Regulations (DCMR).

DDOE conducts the following activities in support of the laws and regulations listed above:

- Reviews and approves construction plans for stormwater runoff control measures, unstable soils, topography compatibility, erosion/sediment control measures, and landscaping;
- Reviews environmental impact screening forms and provides technical comments on environmental assessments;
- Provides technical assistance to developers and District residents;
- Conducts routine and programmed inspections at construction sites for proper stormwater management and erosion/sediment control to ensure compliance with regulations;
- Conducts inspections of stormwater management facilities for proper maintenance;
- Enforces stormwater management and erosion/sediment control regulations at construction sites; and
- Conducts investigations of citizen complaints related to drainage and erosion/ sediment control.

Plan Review

On July 19, 2013, DDOE finalized a new rule on Stormwater Management and Soil Erosion and Sediment Control that updates the District's existing requirements in 21 DCMR, Chapter 5 to reflect current scientific, engineering, and practical understanding of controlling runoff from development. Knowledge and technology in these fields have changed considerably since 1977, when the majority of soil erosion and sediment control requirements were put into place, and 1988, when the District's stormwater management requirements were established. The new regulations call for a stormwater retention performance standard that encourages the use of green infrastructure to manage stormwater. A new Stormwater Management Guidebook was developed to accompany the regulations.

The disturbance of 5,000 sf of land has been a trigger since the stormwater management regulations were established in 1988. The new stormwater retention standard will be triggered by two categories of projects. Major land-disturbing projects (sites that disturb 5,000 sf or more of land) are required to retain the stormwater from a 1.2-inch storm, either on site or through a combination of on-site and off-site retention. Major substantial improvement projects (renovations of existing structures that have a combined 5,000 sf footprint and a project cost that exceeds 50 percent of the pre-project value of the structure) are required to retain the volume from a 0.8-inch storm. After reaching 50 percent of its required retention volume on site, a regulated site in either category has the option to meet the remainder of its retention requirement through the payment of an in-lieu fee or the purchase of privately tradable stormwater retention credits (SRCs).

The innovative SRC trading program, also established by the new rule, is the first of its kind in the nation and has the potential to increase benefits to District waterbodies while reducing the cost of compliance, providing flexibility for developers, and providing other sustainability benefits. The SRC trading program creates a financial incentive and business opportunity for sites to install stormwater retrofits that are completely voluntary or that exceed the regulated requirement.

Since 1999, WPD has approved 2,037 construction plans for stormwater management. Of those, 316 were approved between FY 2012 and FY 2013. Table 2.16 breaks out the most popular BMP types that were installed over the past two years and the amount of drainage area that these BMPs served.

**TABLE 2.16
NUMBER AND TYPE OF STORMWATER MANAGEMENT BMPs APPROVED FOR INSTALLATION**

BMP Type	2012			2013		
	No. of Plans	Drainage Area Served by BMPs		No. of Plans	Drainage Area Served by BMPs	
		Square Feet	Acres		Square Feet	Acres
Bioretention	21	1,930,260	44.30	22	5,051,001	2.31
Filtera/Tree Box	0	0	0	1	10,781	0.25
Infiltration/Ex-filtration and Dry Pond/Swale	19	1,185,978	34.32	10	100,356	14.00
Sandfilter/Stormceptor	6	532,202	12,022.00	8	38,1925	8.77
Green roof	22	1,756,350	40.32	18	856,187	19.66
Porous/Permeable Pavers	12	368,086	8.45	3	215,557	4.95
Underground Detention Systems	3	89,736	2.10	5	21,1892	4.86
Retention Basin System	0	0	0	0	0	0
Hydrodynamic Basins	7	1,263,956	29.02	7	1,113,701	25.57
Cartridge Filtration	37	1,939,504	44.52	43	1,685,574	38.70
Total	127	9,066,072	12,225.03	117	962,6974	119.07

In addition to stormwater management requirements, any construction activity that disturbs more than 50 sf of land is required to submit an erosion and sediment control plan to DDOE for approval. WPD classifies these plans as major (over 5,000 sf) and minor (between 50 and 5,000 sf). During the reporting period, DDOE approved 3,312 erosion/sediment control plans.

Inspection and Enforcement

Inspectors visit construction sites on a regular basis to ensure compliance with regulations. In an effort to streamline enforcement and ensure compliance, WPD developed and implemented new standard operating procedures (SOPs) as part of a larger DDOE enforcement effort that standardized the format for SOPs. These SOPs provide a consistent framework for conducting inspections and issuing notices, fines, and stop work orders for violations. Civil infraction fines range from \$200 to \$4,000, depending on the nature of the infraction or whether the violator is a repeat offender. During the reporting period, WPD's Inspection Program issued 147 Notices of Violation (NOVs) and 93 Notices of Infraction (NOIs) at construction sites. Only NOIs are associated with a monetary fine.

To ensure compliance with the regulations, DDOE also inspects the maintenance and operation of stormwater BMPs after construction has been completed. WPD's Stormwater Management Facilities Maintenance Inspection Program ensures that permanently installed stormwater management BMPs continue to function properly throughout their design life. During the reporting period, DDOE conducted 1,909 maintenance inspections. The program also distributes an instructional video and guidance manual highlighting the important elements for maintaining stormwater sand filters to construction and maintenance personnel. An instructional video on the maintenance of green roofs is being developed and will be offered soon. Presently, there is about 55 acres of green roofs installed in the District. Some green roofs date back to 1971; therefore, many were not installed to meet a stormwater retention regulatory requirement. DDOE anticipates that there will be a dramatic increase in green roofs installations, as it's one way a developer can meet the new requirements.

Floodplain Management Program

The District of Columbia joined the National Flood Insurance Program (NFIP) in 1976 under the programs' emergency provisions, which state that properties within the District are eligible for federally backed flood insurance if they are located in designated areas of the city. To qualify for the emergency coverage, the District passed the "District of Columbia Applications Insurance Implementation Act" on May 26, 1976 (D.C. Law 1-64, D.C. Official Code § 6-501, et seq.). The law gives the Mayor rulemaking authority and allows the Mayor to delegate this authority to the Director of the Department of Consumer and Regulatory Affairs (DCRA) to promulgate rules. The law requires that the Mayor review all building applications for new construction or substantial improvements to property in the District to determine whether or not the proposed building sites are reasonably safe from flooding.

The District promulgated final regulations that set standards for flood hazard control under D.C. Law 1-64 on November 15, 1985. These regulations, known as "Flood Hazard Regulations of the District of Columbia" are published as 20 DCMR, Chapter 41. Subsequently, 20 DCMR, Chapter 31, "Flood Hazard Rules," were amended and adopted on November 19, 2010.

As an NFIP participating community, the District has committed itself to

- Issue or deny floodplain development and building permits;
- Inspect all development to assure compliance with the Flood Hazard Rules (currently 20 DCMR, Chapter 31);
- Maintain records of floodplain development;
- Assist in the preparation and revision of floodplain maps; and

- Help residents obtain information on flood hazards, floodplain maps and data, flood insurance, and proper construction measures.

Under Mayor's Order 84-193 (dated November 2, 1984), Mayor's Order 98-46 (dated April 15, 1998), and Mayor's Order 2006-61 (dated June 14, 2006), the Mayor delegated the authority pursuant to D.C. Law 1-64 to the Director of the District Department of the Environment. The DDOE Director is designated as the Floodplain Administrator and the NFIP Coordinator for the District of Columbia. As the Floodplain Administrator, DDOE coordinates the floodplain regulations (Flood Hazard Rules and construction codes) review and approval process between DDOE and DCRA. DDOE also coordinates and collaborates with other District and federal agencies on flood risk and floodplain management activities in the District of Columbia.

2012–2013 Accomplishments

- **Floodplain Development Permitting:** DDOE provided flood zone determinations and information to developers as part of the permitting process at DDOE and the satellite office in DCRA. DDOE also reviewed Environmental Impact Screening Forms, Erosion and Sediment Control Plans, Stormwater Management Plans, and Floodplain Management Plans for compliance with DC Flood Hazard Rules (20 DCMR, Chapter 31).
- **General Technical Assistance:** DDOE provided general and specific technical assistance to project managers, engineers, and developers for private and public development projects in Special Flood Hazard Areas, including projects for stream restoration, roads, culverts, bridges, and Southwest Waterfront redevelopment.
- **DDOE/DCRA NFIP Coordination Office:** DDOE and DCRA established the DDOE/DCRA NFIP Coordination Office at DCRA's Permit Service Center to improve interagency coordination in the building permit process and for NFIP compliance and enforcement. DDOE staff provides information, addresses issues during the permitting process, and distributes publications and resources to the public and District officials through this office.
- **DC Floodplain Quick Guide:** DDOE issued the Floodplain Management Quick Guide tailored to the District of Columbia's specific needs. The Quick Guide included essential information about NFIP and focused on information designed to help both residents and District officials understand the basics of floodplain management.
- **Bloomingtondale Task Force:** Recent rainfalls in the District resulted in significant flooding and sewer system backups in the Bloomingtondale and LeDroit Park neighborhoods. In response, the Mayor formed a task force (see <http://oca.dc.gov/node/226932>) to investigate the causes of these problems and to develop recommendations for actions that may be taken by the District of Columbia Water and Sewer Authority (DC Water), other

District agencies, and residents to reduce the future likelihood of flooding and sewer system backups in these neighborhoods. The Mayor's Task Force on the Prevention of Flooding in the Bloomingdale Area established five committees: (1) Technical; (2) Finance; (3) Emergency Response; (4) Planning and Research; and (5) Legislative and Government Affairs. The Technical Committee includes DDOE staff. DDOE partners with DC Water to provide cisterns to homeowners who request them.

- **Staff Training:** DDOE partnered with the D.C. Homeland Security and Emergency Management Agency (HSEMA) to host training courses for officials from various District agencies and surrounding jurisdictions, including DDOE; the Department of Consumer and Regulatory Affairs (DCRA); the D.C. Office of Planning, DC Water; Arlington County, VA; the City of Alexandria, VA; the City of North Brentwood, MD); and Prince George's County, MD. Training courses included Floodplain 101, Flood Provisions in Building Codes, Retrofitting Flood-Prone Residential Buildings, and Substantial Improvement/Substantial Damage.
- **Award:** The Federal Triangle Stormwater Drainage Study received the American Planning Association Federal Planning Award for Outstanding Collaborative Planning Project or Program. Partnering agencies and members of the working group included: DDOE, HSEMA, the D.C. Office of Planning, DC Water, The U.S. Federal Emergency Management Agency (FEMA), the National Archives and Records Administration, the National Capital Planning Commission, the National Gallery of Art, the National Park Service (NPS), the Smithsonian Institution, the U.S. Department of Justice, the U.S. Environmental Protection Agency, the U.S. General Services Administration, and the Washington Metropolitan Area Transit Authority (WMATA).
- **DC Flood Risk Management Team:** A DC Flood Risk Management Team was established. The interagency coordinating Team included members from NPS, the U.S. Army Corps of Engineers (USACE), the National Oceanic and Atmospheric Administration/National Weather Service, the U.S. Geological Survey (USGS), FEMA, the D.C. Office of Planning, DC Water, WMATA, and DDOE. The Team's vision statement is to establish and strengthen intergovernmental federal and District partnerships as a catalyst in developing and implementing comprehensive, resilient, and sustainable solutions to the District of Columbia's flood-hazard challenges.
- **North Atlantic Coast Comprehensive Study:** DDOE staff attended the North Atlantic Coast Comprehensive Study working meeting in Hoboken, NJ. The intent of this meeting was to bring together federal agencies; tribal, state, and local governments; academic institutions; and non-governmental organizations to gather information and input on how to build resilience and reduce risk for those areas affected by Superstorm Sandy. Participants identified actions that can create resilience and reduce risk along the coastline.

Coordination with Other Agencies

Information on coordination with other local, regional, and federal agencies is included throughout this report.

Cost/Benefit Assessment

Cost

The District has and continues to commit significant amounts of resources to improve the quality of its waters. Effective wastewater treatment, sewer system maintenance, combined sewer overflow control and stormwater management are the principal elements in water pollution control. The activities undertaken in each of these areas is presented below. Table 2.17 summarizes the costs.

Wastewater Treatment

The Blue Plains Wastewater Treatment Plant (WWTP) operated by DC Water (formerly DC WASA) provides wastewater services to over two million customers in the District and the surrounding jurisdictions of Maryland and Virginia (Figure 2.4). Blue Plains is one of the largest WWTPs in the nation. The waste water treatment cost which accounts for over sixty percent of the water quality control cost, is reflective of the regional character of the WWTP. The WWTP operates under a stringent National Pollutant Discharge Elimination System (NPDES) permit. Significant plant-wide upgrade, rehabilitation and installation of support system are continually ongoing. Among the major projects is the Biological Nutrient Removal project to meet the goals of the Chesapeake Bay Agreement.

DC WATER SERVICE AREA

Figure 2.4: DC Water Service Area (Source: DC Water Budget in Brief, Jan 2013)

Sanitary Sewer System

The bulk of the cost of the waste water collection system is associated with the assessment, rehabilitation and replacement of the aging infrastructure in the District. High bacteria counts in various waterways have been attributed to leaking sanitary sewers. Under a multi-year Sewer Assessment Program, DC Water completed the Sewer System Facilities Plan in 2009. The plan addresses the evaluation of the physical condition and capacity of the sewer system, identification and prioritization of rehabilitation needs, record keeping and data management, as well as ongoing inspection and rehabilitation programs. In accordance with key findings and recommendations of the plan, priority projects to rehabilitate sewer collection systems as well as pumping facilities are currently ongoing. In particular, the rehabilitation of sewers in stream valleys will result in significant water quality improvement.

Combined Sewer Overflow Long-Term Control Plan

DC Water completed the CSO Long Term Control Plan (LTCP) report in 2002. The plan involves the construction of large underground tunnels that will serve as collection and retention system for combined sewer during high flow conditions. Under a 2005 agreement with the federal government, the LTCP is to be implemented over a 20 year period. The plan is to reduce combined sewer overflows to District waters by 96 percent. Construction of the Anacostia River segment of the stormwater storage tunnel is underway. In December 2012, EPA, the District government and DC Water entered into an agreement: the Green Infrastructure Partnership Agreement (GIPA). The GIPA reinforces the mutual commitments to Green Infrastructure (GI) to mitigate combined sewer overflows to the District waterways. DC Water is currently

proposing modification of the 2005 agreement to incorporate the GI plan (also known as the Clean Rivers Project). The plan calls for \$100 million investment for the construction of GIs in the Potomac River and Rock Creek watersheds and forego the building of the tunnels in those watersheds. The GI project periods for implementation in the Rock Creek watershed is expected to begin in 2015 and complete in 2032, the Potomac River watershed project will span from 2017 to 2028. The GI Plan is currently under public review, thus the costs are not included in this report.

Capital Equipment

The capital equipment cost constitutes a portion of the waste water collection and treatment expenditures in the areas of acquisition and maintenance of information technology and large equipment. It accounts for about three percent of the waste water treatment cost.

Stormwater Management

Stormwater management in the District is a multi-agency effort that includes the District Department of the Environment, the District Department of Transportation, the Department of Public Works, the District of Columbia Water, and the District Department of General Services. The cost for storm water management covers a whole array of activities including research and demonstration projects, drainage improvements, monitoring and control of various types of pollutants from various sources, enforcement and public education. The cost may include capital construction costs, and those associated with operation and maintenance of structural controls, such as the rehabilitation/replacement of storm sewers and inlets.

In addition, the District received funding under the American Recovery and Reinvestment Act (ARRA). A number of stormwater management projects were funded under the ARRA. The projects which included enhancing tree canopy, installation of rainwater harvesting and reuse tanks, permeable pavers, and green roofs accounted for less than one percent of the costs.

The cost of other Best Management Practice (BMP) structures and activities incurred by private entities is difficult to estimate. Installation of various BMP devices such as sand filters, infiltration trenches, and oil/water separators have been required for new construction in the District of Columbia since the early eighties. Other BMPs such as green roofs are being actively promoted by DDOE. DDOE sponsored a study of the costs associated with the implementation of District-wide storm water management requirements (Cost Analysis of Proposed District of Columbia Stormwater Regulations - Draft January 11, 2010). The estimated compliance cost for three development scenarios ranges between 0.03% to 0.16% of the total development cost. This cost is not included in this report.

**TABLE 2.17
COST SUMMARY OF WATER POLLUTION CONTROL ACTIVITIES**

Activity Area	FY 2012*	FY 2013*	Total FY 2012-2013*	Percent
Waste Water Treatment**	253,305	358,543	611,848	60.4

**** The cost is for projects completed in the Fiscal Year

Benefits

The benefits to clean rivers and streams are increasingly being realized in the District of Columbia. In particular, the Anacostia River waterfront development which gained prominence in recent years, promotes recreational use of the waters. The District of Columbia Comprehensive Plan lays the foundation for the policies in support of an ecologically sound waterfront development. Among the key elements of the plan is to “create and enhance relationships between the rivers and District residents, develop urban waterfronts and water-related recreation in appropriate locations, and establish attractive pedestrian connections from neighborhoods to activities along the waterfronts”. Development and rehabilitation of waterfront properties to include residential, retail, office space and green space areas that begun in 2007, continue to expand through the watersheds “... the Mayor’s Sustainability and Green Infrastructures Initiatives”.

Qualitatively, improvements continue to be seen. A quantitative assessment of the benefits resulting from current water pollution control expenditures is difficult to make. However, the long term benefits over time are evident. Fish tumor survey conducted by the US Fish and wildlife Service (“Temporal and Spatial Patterns in Tumor Prevalence in Brown Bullhead (*Ameiurus nebulosus*) in the Tidal Potomac River Watershed”, April 2013) examined fish tissue analysis from the Anacostia River sampled in the years of 1996, 2000-2001, 2009-2011. The survey shows that there has been a marked decrease in the prevalence of tumors in bottom dwelling fish in the Anacostia River. The report indicates that the mitigation efforts “... would have occurred in the 2000-2006 period to be reflected in the tumor prevalence of the mostly 3-5 year old bullheads collected in 2009-2011.” The survey also indicates that “... although there

has been marked improvement compared with 1996–2001, both the liver and skin tumor probabilities for the 2009–2011 Anacostia bullheads remain significantly elevated compared with our estimate of Bay-wide background.”

Recreational fishing is active in the District. Annual surveys by the Fisheries and Wildlife Division (FWD) document the general stability of the resident and migratory fish populations in District of Columbia waters. The sale of fishing licenses in the District support the findings of the annual surveys and is an indicator of recreational use. Since 1988, the District of Columbia has required the purchase of licenses to fish in District waters.

Table 2.18 is a summary of the number of licenses sold from 2008 to 2011. In 2008, the federal law for certifying fishing and hunting licenses by the US FWS was changed, now states are required to conduct certification on a fiscal year cycle instead of the former calendar year. 2012 fishing license certification sales will be available August 2014 and 2013 sales will be available August 2015.

**TABLE 2.18
SALES OF FISHING LICENSES IN THE DISTRICT OF COLUMBIA
(2008 TO 2011)**

Year	Non-Resident	Resident	Total
2008	7016	1912	8928
2009	5598	1987	7585
2010	6164	1926	8090
2011	4551	1461	6012

Special State Concerns and Recommendations

TMDL Implementation Plans

The District faces a challenging task in developing a consolidated TMDL Implementation Plan. However, the District believes this requirement represents a significant opportunity to develop and implement a strategic and meaningful approach for improving the quality of District waters. The approach outlined in the modified MS4 Permit represents a performance-based approach for reducing stormwater runoff volume and pollution, addressing TMDL compliance and ultimate attainment of water quality standards. It starts from a position of understanding that WLA and

WQS attainment are long-term goals, likely to require multiple permit cycles, and that the District is in the best position to conduct this analysis. Finally, the approach grants DDOE much-needed flexibility, first to define a compliance schedule that realistically estimates compliance based on available resources, and also to rationalize the number of TMDLs to address, by consolidating, revising, or employing surrogate measures where appropriate.

Recommendation: The primary actions required for successful development of TMDL Implementation Plans are:

- Continued support for the TMDL Implementation Plan approach as described in the modified MS4 Permit.

Federal Role in Anacostia River Restoration

Restoration efforts to attain Clean Water Act goals in the Anacostia River have been ongoing for more than twenty years. Yet there is still a long way to go before the river can be considered fishable and swimmable. In recent years, increased attention has been placed on the Federal government's share of responsibility for the river's current condition, as well as its potential role in restoration efforts. The Federal government owns approximately one-third of the total land area in the District of Columbia, and approximately 20 percent of the impervious surface that contributes stormwater runoff to the District's waters. DC Appleseed's 2011 report "A New Day for the Anacostia" summarized how much of the damage to the Anacostia derives from the outsized role the Federal government has played in the watershed for centuries. These activities range from filling in over half of the watershed's tidal acreage and most of the watershed's wetlands, to designing, constructing and operating for some time the city's combined sewer system, to channelizing streams, to discharging toxic materials from federal installations, and to general development of federal facilities which increased impervious surface.

In recognition of these impacts, a number of drivers now compel the Federal government to take a larger role in improving and restoring the Anacostia's condition. The Energy Independence and Security Act (EISA) included provisions requiring new Federal development and redevelopment projects over 5,000 sf in size to maintain or restore the property's predevelopment hydrology. Executive Order 13514, on Federal Leadership in Environmental, Energy, and Economic Performance, requires 15% of Federal facilities to implement improved stormwater management practices by FY 2015. Finally, Executive Order 13508, on Chesapeake Bay Protection and Restoration, calls for the Federal government to take the lead in planning and implementing strategies to restore the Chesapeake Bay, with a focus on reducing water pollution from Federal lands and facilities. Each of these commitments is admirable and represents a

significant opportunity to improve water quality in the Anacostia. However, they are all voluntary effort by the Federal government. It is unclear how close actual implementation will come to the specified performance levels in the absence of any accountability and enforcement mechanism.

Recommendation: The primary action required for a successful increased Federal role in the Anacostia River's restoration are:

- Successfully implementing the stormwater management requirements of EISA, E.O. 13508 and E.O. 13514 by developing accountability and enforcement mechanisms to compel Federal agency compliance with these requirements.

Discharge of Treated Groundwater from Contaminated and Potentially Contaminated Construction Sites into Waters of the United States within the District of Columbia

Economic development within the District creates a significant challenge when complying with District and federal regulatory requirements. Frequently, developers encounter high groundwater tables and need to dewater at construction sites. Some of these sites are contaminated and may also be impacted by natural background conditions. Within recent years, there has been an increase in the number of developers applying for National Pollutant Discharge Elimination System (NPDES) permits to discharge treated contaminated groundwater to Waters of the US through the District's MS4. Although the NPDES Construction General Permit authorizes the discharge of uncontaminated groundwater or uncontaminated construction dewatering effluent, currently no EPA NPDES general permit exists that covers the discharge of treated groundwater from contaminated or potentially contaminated construction sites. Additionally, permit applicants have expressed their concern regarding the following issues:

- The need to treat groundwater with naturally-occurring metals concentrations above the District's surface water quality standards; and,
- The need to meet the District's surface water quality standards, although there is no economical technology available to treat groundwater to these surface water quality standards.

Recommendations: The District recommends that EPA conduct the following:

- Finalize and issue the general permit for the discharge of contaminated and/or treated groundwater.

- Develop a new human health criterion for arsenic and other natural occurring metals based on local data or a study to obtain the necessary information such as background concentration values, impacts to biota, and assess the need to possibly revise bioaccumulation factors.

PART III: SURFACE WATER ASSESSMENT

Current Surface Monitoring Program

Changes

No changes.

There are two real-time monitoring stations on the Anacostia River and one on the Potomac River (Appendix 3.1). Real-time readings of the Rivers show current temperature, DO, pH, specific conductivity, turbidity, and chlorophyll levels. Appendix 3.2 is the percent violation tables for the continuously monitored.

Plan for Achieving Comprehensive Assessments

WQD has a monitoring strategy based on US EPA's 2003 guidance, Elements of a State Water Monitoring and Assessment Program. The strategy will continue the practice of comprehensive monitoring of the District waters. The strategy describes a monitoring program that will move towards allowing water quality resource managers to know the overall quality of District waters, the extent of water quality change, trouble areas, the level of protection needed, and the effectiveness of projects to correct impairments. The approved monitoring strategy includes language to continuously update the document as new areas or issues of concern arise.

Assessment Methodology and Summary Data

Assessment Methodology

E. coli bacteria data were used to make use support decisions about pathogens. Class A water quality criteria are pH, turbidity and E. coli. Class B water quality criteria are aesthetics, pH and turbidity. The threshold used for these uses may be found in Table 3.1.

A regional Trash TMDL for the Anacostia River exists and the WQS include narratives that the aesthetic qualities of Class B waters shall be maintained. The waterbody segments are not fully supported. A methodology of the use support determination needs to be developed.

**TABLE 3.1
THRESHOLD FOR CONVENTIONAL POLLUTANTS AND PATHOGENS**

Support of Designated Use	Threshold for Conventional Pollutants and Pathogens
Fully Supporting	For any pollutant, standard exceeded in $\leq 10\%$ of measurements. Pollutants not found at levels of concern.
Not Supporting	For any one pollutant, standard exceeded in $> 10\%$ of measurements. Pollutants found at levels of concern.
Not Assessed	Not assessed
Insufficient Information	Data to determine if the designated use is fully supporting/not supporting is not available.

Conventional pollutants are defined here as dissolved oxygen (DO), pH, turbidity, and temperature.

Biological/habitat data collected during 2002-2009, habitat data collected during 2009-2013, in addition to physical/chemical data is used to determine aquatic life (Class C) use support for the small District streams. Biological/ habitat data for small streams was evaluated using the EPA stressor identification guidance. If a stream’s aquatic life use is not supported based on the biological information found in the DC Tributary Assessment Report (draft internal document) it is listed under Category 5 of the list, if a TMDL has not been completed.

Table 3.2 indicates streams where rapid bioassessment data is collected. Piney Branch and Foundry Branch only have habitat data available. The reference streams are in Maryland. The Maryland Biological Stream Survey, 2005, was the data source.

Aquatic life use support is based on the relationship between observed stream biological conditions as compared to the reference stream condition producing a percent of reference stream biological condition. This scale rates “impaired” at 0-79 percent, and “non-impaired at 80-100 percent” of reference condition. US EPA 305(b) guidelines on criteria for aquatic life use support classification recommend designation of “not supporting” if impairment exists, and “fully supporting” if no impairment exists. Piedmont and Coastal Plain tributaries were assessed using reference condition data from Montgomery and Prince George’s Counties, Maryland. Piedmont is characterized by relatively low, rolling hills with heights above sea level between 200 feet (50 m) and 800 feet to 1,000 feet (250 m to 300 m). Its geology is complex, with numerous rock formations of different materials and ages intermingled with one another. The Coastal Plain has both low elevation and low relief, but it is also a relatively flat landform and has an average elevation less than 900 meters above sea level and extends some 50 to 100 kilometers inland from the ocean.

Biological Integrity Class scores were determined using scoring criteria adapted from Montgomery County. These scoring ranges were also used for Coastal Plain values. Habitat assessments were compared directly to each ecoregions’ corresponding reference condition habitat evaluation.

The following tributaries in Table 3.2 were assessed for the Aquatic Life Use category using data collected during 2002-2013:

 2 - Second round streams (monitored on the odd number year)
 c - Core streams (monitored every year)

In 2012 and 2013 habitat assessments were performed on all core and second round streams. The findings from the habitat assessment are included in the individual assessments (Appendix 3.3).

The District has adopted water quality standards for dissolved oxygen, water clarity and chlorophyll a in accordance with the Chesapeake Bay Water Quality Criteria Guidance Document published in 2003 (US EPA, 2003) for the Potomac Tidal Fresh and Anacostia Tidal Fresh (Chesapeake Bay Program waterbody name). DDOE WQD worked with the Chesapeake Bay Program to assess the tidal waters in the District using the 2003 guidance document and all the addendums published through 2009. For the 2014 listing year, these segments are in Category 4a because the Chesapeake Bay TMDL was established in December 2010.

Fish consumption use determinations (Class D) are informed by known fish consumption advisories in effect during the assessment period. Fish tissue contamination data used to issue advisories are collected at stations located on the Anacostia and Potomac Rivers. If no barrier for fish movement exists, it is assumed that fish move freely to the smaller streams and other

waterbodies. In these cases, fish tissue contamination data may be considered applicable to the connected tributaries. In waters where fish tissue were collected directly from the Anacostia and Potomac mainstems, and the presence of a pollutant was found in actionable levels in the fish tissue, the pollutant will be listed as a cause of impairment for that waterbody. In tributaries that are hydrologically connected to the Anacostia and Potomac mainstems and have indirect evidence, such as fish tissue contamination data from the mainstem Anacostia or Potomac Rivers, that indicate that a tributary may be impaired by a toxic pollutant of concern, the pollutant/tributary combination is deemed to have insufficient data or information to determine if the pollutant is a cause of impairment in the tributary. Table 3.3 has the threshold for fish consumption use designation.

**TABLE 3.3
THRESHOLD FOR FISH CONSUMPTION USE SUPPORT CLASSIFICATION**

Support of Designated Use	Threshold for Fish Consumption
Fully Supporting	No fish/shellfish advisories or bans are in effect.
Not Supporting	"No consumption" fish/shellfish advisory or ban in effect for general population, or a subpopulation that could be at potentially greater risk, for one or more fish species; commercial fishing/shellfishing ban in effect.
Not Assessed	"Not assessed" is used when fish consumption is not a designated use for the waterbody.
Insufficient Information	Data to determine if the designated use is fully supporting/not supporting is not available.

Class E use is determined by the presence or absence of unmarked submerged or partially submerged man-made objects that pose a hazard to users of these waters.

The District also determines overall use support for waterbodies with multiple uses according to EPA guidance (Table 3.4). A waterbody fully supports its designated uses when all its uses are fully supported. When one or more uses are not supporting, then the waterbody is not supporting.

**TABLE 3.4
THRESHOLD FOR OVERALL USE SUPPORT CLASSIFICATION**

Overall Designated Use for Multiple-Use Waterbodies	Threshold for Overall Use Support
Fully supporting	All uses are fully supported.

Overall Designated Use for Multiple-Use Waterbodies	Threshold for Overall Use Support
Not supporting	One or more uses are not supported.
Not Assessed	Not assessed
Insufficient Information	Data to determine if the designated use is fully supporting/not supporting is not available.

Appendix 3.4 includes the tables of percent violations and statistical summary reports for the waterbodies assessed for this reporting cycle.

Maps

Appendices 3.5 through 3.9 display use support data in map format for the surface waters of the District. The maps were generated by DDOE's GIS using ArcGIS software. These maps should help the reader interpret the water quality information given in this report on a geographic basis. Appendix 3.5 shows the degree of support for primary contact recreation. Appendix 3.6 presents the secondary contact recreation and aesthetic. Appendix 3.7 shows the degree of support for the protection and propagation of fish, shellfish, and wildlife. In addition, Appendix 3.8 presents the degree of support for the consumption of fish, and finally, Appendix 3.9 presents the degree of support for navigation.

Section 303(d) Waters

Background

Section 303(d) of the federal Clean Water Act and regulations developed by EPA require states to prepare a list of waterbodies or waterbody segments that do not meet water quality standards even after all the pollution controls required by law are in place. Waterbodies may be divided into segments. Waterbodies or waterbody segments not meeting the appropriate water quality standards are considered to be impaired. The law requires that states place the impaired waterbody segments on a list referred to as the 303(d) list and develop total maximum daily loads (TMDLs) for the waterbodies on the list in Category 5. The Potomac and Anacostia Rivers, Rock Creek and Watts Branch are divided into segments for the assessment purposes of this list.

US EPA requires that information for the assessment, listing, and reporting requirements for Section 303(d) and 305(b) of the Clean Water Act be submitted in an Integrated Report. The current guidance requires the categorization of all state waters into five assessment categories.

Category 1 should include waters with the status that all designated uses are being met. Category 2 should include waters that meet some of their designated uses, but there is insufficient data to determine if remaining designated uses are met. Category 3 should include waters for which insufficient data exists to determine whether any designated uses are met. Category 4 should include waters that are impaired or threatened but a TMDL is not needed. Category 5 should include waters that are impaired or threatened and a TMDL is needed. Categories can be subcategorized.

EPA regulations require that the Integrated Report (305(b)/303(d) list) and methodology used to categorize the waters be submitted to EPA by April 1. The public must also be given the opportunity to comment on a draft list.

Basis for Consideration of Data

Various data sources were considered for use in the preparation of the draft 2014 303(d) List. As the 303(d) list is a tool of the regulatory TMDL process, the District wants to ensure that the 303(d) list produced and eventually approved is based on data that utilized unbiased, scientifically sound data collection and analytical methods. The Water Quality Monitoring Regulations (Title 21, Chapter 19 - District of Columbia Municipal Regulations) were developed to provide for accurate, consistent, and reproducible water quality monitoring data for decision making purposes. Data that did not satisfy the above mentioned monitoring regulations is not reviewed for the development of the 2014 303(d) list.

The draft 2014 list enumerates specific pollutants of concern in various waterbodies or waterbody segments. The draft 2014 303(d) List is based on the following data:

- 2012 303(d) list;
- DC Ambient Water Quality Monitoring data for 2009-2013;
- DC Municipal Separate Storm Sewer System 2007-2011 Monitoring Data;
- Stream Survey data collected between 2002-2003 and 2009-2013;
- Analysis of Biological Samples: District of Columbia Phytoplankton, Zooplankton and Benthic Macroinvertebrate Samples, 2005-2009;
- DC Fish Tissue Contamination Report, 2009; and
- Supplemental toxics monitoring data (collected by TetraTech), 2012-2013

In January 2014 a request for data was sent to organizations that may have data for the waters of the District of Columbia. Data received was reviewed and considered during preparation of the final 303(d) list.

Use Support Determination

Ambient Monitoring Data and Stream Survey Data

WQD uses the WQS to evaluate its surface waters. The designated uses for the surface waters of the District of Columbia are:

- primary contact recreation (swimmable),
- secondary contact recreation and aesthetic enjoyment (wadeable),
- protection and propagation of fish, shellfish, and wildlife (aquatic life),
- protection of human health related to consumption of fish and shellfish (fish consumption), and
- navigation

For the draft 2014 303(d) list determination, physical, chemical, and bacterial data collected from January 2009 to December 2013 are being used to make the use support decisions for primary contact, secondary contact, and aquatic life support uses for the rivers. A waterbody or waterbody segment is included on the draft 303(d) list if its designated use was not supported, i.e.- greater than 10% exceedance of the conventional pollutant and bacteria measurements taken within the data period of study. It is listed on Category 5 of the list if it is a new instance of non-support of a parameter and a TMDL does not exist. If it is a new instance and a TMDL does exist, the pollutant is placed in Category 4a.

Biological/habitat data collected during 2002-2003, habitat data collected during 2009-2013, in addition to physical/chemical data is used to determine aquatic life use support for the small District streams. Biological/ habitat data for small streams was evaluated using the US EPA stressor identification guidance. If a stream's aquatic life use is not supported based on the biological information found in the Stream Survey data it is listed under Category 5 of the list, if a TMDL has not been completed.

Interpretation of Toxic Monitoring Data for 303(d) Listing Purposes

DDOE and EPA (with contractor support from TetraTech) reviewed a ten-year historic record of toxic contaminants in District waterbodies and concluded that the original 303(d) listing of several parameters for toxics such as metals, PCBs, PAHs, and organochlorine pesticides were based on very limited data, primarily fish tissue data collected in the mainstems of the Anacostia and Potomac Rivers, along with some supplementary sediment and water quality data collected in the Anacostia River mainstem in the early 2000 timeframe. An analysis of previous listings for metals and toxic organic pollutants in the tributaries of Rock Creek, the Anacostia and Potomac Rivers mainstem and their tributaries. In many cases this fish tissue data was not collected in the actual waterbodies being assessed. A supplemental water quality sampling effort was conducted to fill data gaps with current information in preparation for calculating daily loads

for existing TMDLs for these waterbodies. A complimentary goal of this work was to use the data to either verify impairment, attainment or to indicate the need for additional data to determine the impairment status.

For situations where the presence of a pollutant in a waterbody was confirmed at an actionable level, either in the historic data record or by the 2013-2014 sampling effort, the pollutant will continue to be listed as a cause of impairment for the waterbody (in Category 4a).

For situations where no water column sampling data, in either the historic record or from the 2013-2014 sampling effort, supports the original determination that a waterbody was impaired by a toxic pollutant of concern, the pollutant will no longer be identified as a cause of impairment in the waterbody, as it has never been detected at an actionable level.

In waters where fish tissue were collected directly from the Anacostia and Potomac mainstems, and the presence of a pollutant was found in actionable levels in the fish tissue, the pollutant will be listed as a cause of impairment for that waterbody (Category 4a or 5).

In tributaries that are hydrologically connected to the Anacostia and Potomac mainstems and have indirect evidence, such as fish tissue contamination data from the mainstem Anacostia or Potomac Rivers, that indicate that a tributary may be impaired by a toxic pollutant of concern, the pollutant/tributary combination is placed in Category 3 (insufficient data or information to determine if the pollutant is a cause of impairment in the tributary).

Under a multi-year Sewer Assessment Program, DC Water completed the Sewer System Facilities Plan in 2009. The plan addresses the evaluation of the physical condition and capacity of the sewer system, identification and prioritization of rehabilitation needs, record keeping and data management, as well as ongoing inspection and rehabilitation programs. In accordance with key findings and recommendations of the plan, priority projects to rehabilitate sewer collection systems as well as pumping facilities are currently ongoing. In particular, the rehabilitation of sewers in stream valleys will result in significant water quality improvement. Since other pollution control requirements are expected to address the waterbody/pollutant combinations and result in attainment of the water quality standards in a reasonable period of time the pollutant will continue to be listed as a cause of impairment for that waterbody (Category 4b).

Municipal Separate Storm Sewer (MS4) Data

The MS4 data used is the result of wet and dry weather samples collected from the stations monitored during the MS4 monitoring cycle. Only parameters for which numeric criteria was listed in the WQS were evaluated. The most strict criteria listed was used for comparison with the data results.

Other Listing Revisions

Hickey Run fecal coliform has been added to Category 4a. It is not a new listing, it was inadvertently missed on earlier 303(d) list. Metals were not listed in the 2010 or 2012 303(d), therefore arsenic, copper, zinc are removed completely from list.

Fort Dupont Creek, Fort Chaplin Tributary, Fort Davis Tributary, and Fort Stanton Tributary exceeded the WQS more than 10% of the time from 2009 to 2013 for TSS. There is an approved Anacostia Watershed TMDL for TSS dated July 2007. Since there is an approved TMDL for TSS, the 2014 listing is covered by the existing TMDL and listed in Category 4a.

Category Placement Methodology

The pollutant causing an impairment in a waterbody or waterbody segment must be identified. With multiple uses associated with each waterbody it is possible for a single waterbody to need more than one TMDL. The guidance allows for a waterbody segment to be listed in one or more categories. Keep in mind that the main goal of this list is to have TMDLs approved and implemented so that water quality standards can be attained. Following is a general description of the categories.

Category 1 - All designated uses are supported, no use is threatened.

Category 2 - Available data and/or information indicate that some, but not all, designated uses are supported.

Category 3 - There is insufficient available data and/or information to make a use support determination.

Category 4 - Available data and/or information indicate that at least one designated use is not being supported or is threatened, but a TMDL is not needed.

- Category 4a - A State developed TMDL has been approved by EPA or a TMDL has been established by EPA for any segment-pollutant combination.
- Category 4b - Other required control measures are expected to result in the attainment of an applicable water quality standard in a reasonable period of time.
- Category 4c - The non-attainment of any applicable water quality standard for the segment is the result of pollution and is not caused by a pollutant.

Category 5 - Available data and/or information indicate that at least one designated use is not being supported or is threatened, and a TMDL is needed.

Priority Ranking

Waterbodies that are first placed in 2014 on the draft list for toxics substances such as metals, pesticides, carcinogens or noncarcinogens, etc. are ranked as high priority for TMDL development on the basis of their risk to human health. Experience with the TMDL development process- data gathering, model development, public participation- the District of Columbia does

not foresee the development of TMDL for waterbodies ranked as high priority before the next five years. Keep in mind that impaired waters listed on the 2014 Section 303 (d) list are scheduled for development until 2022. Revisions to TMDLs required by the consent decree are occurring in the interim.

If a waterbody is first listed in 2014 for E. coli due to primary contact use violations that waterbody is ranked as Medium priority waterbodies. Bacterial impairment also poses some human health risk, though the effects seen are usually not as severe as toxic substances' effects. The primary contact use exceedances (a current use) will take higher priority than the secondary contact recreation use exceedances as it is also more a efficient use of resource to address the existing uses before the designated uses (such as secondary contact recreation). Waterbodies listed for trash will be ranked as High priority. Waterbodies listed for pH are also ranked as Medium priority as it is a aquatic life use criterion. The medium priority waterbodies (first listed in 2014) will be scheduled for TMDL preparation by 2022.

Waterbodies listed for any other pollutant not previously mentioned will also be ranked low priority. Low priority waterbodies will be scheduled for TMDL preparation by 2022. The TMDL establishment date for some of the waterbodies listed in category 5 has been adjusted to account for changing priorities related to TMDLs development in the region.

Georeferencing

The geographic location codes included in the draft 2014 303(d) List were taken from the National Hydrography Dataset. The District has two codes. 02070010 - the Potomac Watershed and 02070008- the Middle Potomac-Catoctin Watershed. Only one District waterbody, Dalecarlia Tributary, is in the Middle Potomac-Catoctin Watershed. All the remaining waterbodies are in the Potomac Watershed. The EPA Assessment Database Version 2.3.1 for Access is being used to compile the data for the Integrated Report.

Public Participation

The draft 2014 Section 303(d) list was available for a 30-day public comment period. The comment period commenced on August 22, 2014 and ended on September 22, 2014. A copy of the draft 303(d) list was available at the Martin Luther King, Jr. Public Library's Washingtonian Room starting on August 22, 2014. The notice was also published on the DDOE website. The formal required responses to the comments received were prepared and sent to EPA Region 3.

Categorization of District of Columbia waters

See Appendix 3.10 for Categorization List.

Please note the 2014 ADB (User Cat.) in the sub-header of each waterbody reflects the District's

2014 303(d) category listings. For the complete list of 303(d) categories and contaminants of concern see Appendix 3.10.

Rivers and Streams Water Quality Assessment

Designated Use Support

Twenty-four rivers and streams were assessed for this update. Each of those waterbodies were impaired for one or more uses (Table 3.5). Appendix 3.3 contains individual assessments for each of the waterbodies.

**TABLE 3.5
SUMMARY OF FULLY SUPPORTING, THREATENED,
AND IMPAIRED RIVERS AND STREAMS**

	Assessment	Category	Total
Degree of Use Support	Evaluated	Monitored	Assessed Size (miles)
Size Fully Supporting All Assessed Uses	0.00	0.00	0.00
Size Fully Supporting All Assessed Uses but Threatened for at Least One Use	0.00	0.00	0.00
Size Impaired for One or More Uses	0.00	38.40	38.40
TOTAL ASSESSED	0.00	38.40	38.40

Based on Table 3.6, no District stream supported its aquatic life use. The fish consumption use was not supported in any of the streams assessed due to the fish advisory in effect for District waterbodies. No stream in the District supported its primary contact use due to pH, turbidity and or E. coli violations. Several streams supported its secondary contact use. The navigation use was fully supported in the streams and rivers.

**TABLE 3.6
INDIVIDUAL USE SUPPORT SUMMARY FOR RIVERS AND STREAMS**

Type of Waterbody: Rivers and Streams (miles)

Goals	Designated Use	Total in State	Total Assessed	Supporting – Attaining WQS	Not Supporting – Not Attaining WQS	Insufficient Data & Information	Size Not Assessed

Relative Assessment of Causes/Stressors

The causes of impairment to streams and rivers are varied. For example, Fort Chaplin and Fort Davis have occasional problems with low DO. Many of the streams have poor biological integrity. Table 3.7 lists the causes of impairment to District streams and rivers.

**TABLE 3.7
TOTAL SIZES OF WATER IMPAIRED BY VARIOUS CAUSE CATEGORIES FOR RIVERS AND STREAMS**

Relative Assessment of Sources

A source of impairment that is common to the District's rivers and streams is urban runoff from imperviousness. Battery Kemble and Portal Branch are highly impacted by runoff. Habitat modification still has an impact on many of the streams as riparian vegetation is removed and stream banks are destabilized due to heavy runoff. Combined sewer overflow continues to affect Klinge Valley Creek, Rock Creek and Piney Branch. Table 3.8 lists the sources of impairment.

**TABLE 3.8

Lakes Water Quality Assessment

Three waterbodies were monitored for designated use support. The waterbodies classified as lakes are Kingman Lake, C&O Canal, and the Tidal Basin. All of these waterbodies were impaired for one or more of their designated uses. Table 3.9 is a summary of the degree of support by lakes in the District. Individual water quality assessments may be found in Appendix 3.3.

**TABLE 3.9
SUMMARY OF FULLY SUPPORTING, THREATENED, AND IMPAIRED LAKES**

	Assessment	Category	Total
Degree of Use Support	Evaluated	Monitored	Assessed Size (miles)
Size Fully Supporting All Assessed Uses	0.00	0.00	0.00
Size Fully Supporting All Assessed Uses but Threatened for at Least One Use	0.00	0.00	0.00
Size Impaired for One or More Uses	0.00	238.40	238.40
TOTAL ASSESSED	0.00	238.40	238.40

Designated Use Support

Lakes in the District supported the goals of the CWA to various degrees. Based on physical/chemical data, the aquatic life use was fully supported in the C&O Canal and Kingman Lake. It was not supported in the Tidal Basin. Due to the fish consumption advisory currently in effect in the District of Columbia, the fish consumption use was not supported in any of the waterbodies. No lake in the District supported its primary contact use due to pH, turbidity and or E. coli violations. No lake supported is secondary contact use. The navigation use was fully supported. Table 3.10 is the use support summary for District lakes.

**TABLE 3.10

Estuary and Coastal Assessment

The Anacostia River, the Potomac River, and the Washington Ship Channel are classified as estuaries due to their tidal influences. The Potomac River and the Anacostia River are divided into segments for assessment purposes. Individual water quality assessments for the waterbodies can be found in Appendix 3.3.

Designated Use Support

All of the estuary waterbodies were impaired for one or more of their designated uses. The total square miles monitored and assessed are shown in Table 3.12.

**TABLE 3.12
SUMMARY OF FULLY SUPPORTING, THREATENED, AND IMPAIRED ESTUARIES**

	Assessment	Category	Total
Degree of Use Support	Evaluated	Monitored	Assessed Size (miles)
Size Fully Supporting All Assessed Uses	0.00	0.00	0.00
Size Fully Supporting All Assessed Uses but Threatened for at Least One Use	0.00	0.00	0.00
Size Impaired for One or More Uses	0.00	5.93	5.93
TOTAL ASSESSED	0.00	5.93	5.93

The aquatic life use was fully supported along 0.8 square miles of estuary, and not supported along 5.13 square miles of estuary. The fish consumption use was not supported due to the fish consumption advisory in effect for District waters. No estuary in the District supported its primary contact use due to pH, turbidity and or E. coli violations. The navigation use was fully supported in estuaries as no hazard to users by submerged or partially submerged artificial objects were known to exist in the waterbodies during this study period.

**TABLE 3.13

- = not applicable

Relative Assessment of Causes

All the estuaries have low DO or turbidity impairments. It is most pronounced in the Anacostia River. Table 3.14 lists the causes of impairment to estuaries in the District.

**TABLE 3.14
TOTAL SIZES OF WATER IMPAIRED BY VARIOUS CAUSE CATEGORIES FOR ESTUARIES**

Report for Water Type: ESTUARY; Units: SQUARE MILES

Special Topics

Total Maximum Daily Load (TMDL) Program

Background

The Federal Clean Water Act (CWA) §303(d)(1)(A) states:

Each state shall identify those waters within its boundaries for which the effluent limitations required by §301(b)(1)(A) and §301(b)(1)(B) are not stringent enough to implement any water quality standards applicable to such waters. The State shall establish a priority ranking for such waters, taking into account the severity of the pollution and the uses to be made of such waters.

Further, §303(d)(1)(C) states:

Each state shall establish for the waters identified in paragraph (1)(A) of this subsection, and in accordance with the priority ranking, the total maximum daily load, for those pollutants which the Administrator identifies under §304(a)(2) as suitable for such calculations. Such load shall be established at a level necessary to implement the applicable water quality standards with seasonal variations and a margin of safety which takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality.

In 1998, the District developed a list of waters that did not or were not expected to meet water quality standards as required by §303(d)(1)(A). The §303(d) list is reviewed and revised as needed every two years. As stated in the CWA, TMDLs shall be developed for those water bodies not attaining water quality standards after application of technology-based and other required controls. A TMDL sets the quantity of a pollutant that may be introduced into a waterbody without exceeding the applicable water quality standard. A TMDL is typically defined as the sum of the wasteload allocations (WLAs) assigned to point sources, the load allocations (LAs) assigned to nonpoint sources, and a margin of safety (MOS). The TMDL is commonly expressed as:

$$\text{TMDL} = \text{WLAs} + \text{LAs} + \text{MOS}$$

TMDL Development

TMDL development is an evolving process which also envisions revisions to be made to a TMDL from time to time whenever new information/data becomes available. Since 1998, WQD has developed approximately 357 TMDLs for the District's waters, all of which were approved by EPA. Many of the District's existing TMDLs were established based on limited data and narrow modeling options available at the time. Most of these TMDLs need to be revised by taking into account new available data and improved understanding of the natural environmental processes. Revising these TMDL will provide an opportunity to develop better water quality models with enhanced prediction capabilities, and consequent upon that, an improved implementation plan for better protection of the environment.

WQD has undertaken development of the TMDLs through required monitoring and modeling studies for the Anacostia and Potomac Rivers and their tributaries including Rock Creek. The §303(d) list in this report summarizes the TMDLs that are already completed or planned to be developed in the coming years.

Current TMDL Development Related Activities in the District

1. Chesapeake Bay TMDL

Pursuant to section 303(d) of the CWA, EPA established a Chesapeake Bay-wide TMDL for nutrients and sediment for all impaired segments in the tidal portion of the Chesapeake Bay watershed, on December 29, 2010. As a signatory to the EPA Chesapeake Bay Agreement, DDOE has been actively working with EPA and the other partner jurisdictions (MD, VA, PA, WV, NY and DE) on the Phase 6 suite of models.

DDOE regularly participated in the Bay Water Quality Steering Committee/Water Quality Goal Implementation Team (WQGIT) and the various technical workgroups - and took an active role in addressing issues specific to the District. DDOE also provided source data and related information to the Bay Program as needed.

WIP III preparation/review discussions and updates to the land-use dataset are on-going concerns. Land-use data set updates are intended to improve the accuracy of federal footprint in the DC and also inform the development of the Phase 6 suite of models.

2. Bacteria TMDLs Revision

Revision of the fecal coliform based-bacteria TMDLs for the District pursuant to *Friends of the Earth v. EPA* 446 F.3d 140 (D.C. Cir. 2006) have been completed and final documents will be

submitted to EPA for approval. The revisions also include translation from fecal coliform to *E. coli*, which DDOE adopted as the bacteria water quality criteria on January 1, 2008. Upon EPA's approval of the submitted documentation, the final revised TMDL documents and comment response document (CRD) will be made available on the DDOE web site.

3. Toxics Monitoring for TMDL Development

In 1988, the District listed a number of waterbodies for toxics on its 303(d) list, for which TMDLs were subsequently developed. These TMDLs need to be revised by expressing the load allocations in "daily" terms (*Friends of the Earth v. EPA* 446 F.3d 140 (D.C. Cir. 2006)). To fulfill this requirement, EPA has contracted TetraTech, Inc., to develop and implement a monitoring program for collecting data for toxic pollutants in waters of the District. The collected data will be evaluated to identify individual toxics of concern and used, where appropriate, to support any decision to either de-list some toxics TMDLs, or proceed with establishing new toxics TMDLs. Field sampling is on-going.

4. Hickey Run's Total Residual Chlorine Impairment

Hickey Run was identified on the 2002 District of Columbia's Section 303(d) List as impaired due to Total Residual Chlorine (TRC) from nonpoint sources, and it was expected that a TMDL would be developed by end of December, 2012. Careful evaluation of the sampling data used in the listing revealed that the data was inadequate, and thus could not be used to construct a defensible TMDL. Instead of a TMDL, DDOE plans, and has formally requested EPA's approval to use alternative approaches tailored to Hickey Run's specific circumstances and incorporate improvement measures and adaptive management. Water quality sampling in the Hickey Run watershed is expected to begin by late 2013, or early 2014. Collected data will be used to validate the impairment listing or to develop a TMDL, if necessary.

Submerged Aquatic Vegetation

The FWD Fisheries Management Branch (FMB) has been monitoring submerged aquatic vegetation (SAV) since 1993. In this time, FMB has compiled an extensive amount of data that reflects the growth and decline of SAV species within the District. Not only does SAV provide an important habitat for aquatic life, it provides sediment stabilization as well as improvements in water quality. It is an important component to the health of the District's aquatic ecosystem. Nutrient and sediment pollution are both limiting factors for SAV viability. The District is considered a highly urbanized area, with substantial runoff. Monitoring SAV within the District is an important factor when considering the health of the aquatic ecosystem for these reasons.

2013 observations revealed 8 different species of SAV including: *Ceratophyllum demersum*, *Hydrilla verticillata*, *Najas guadalupensis*, *Najas minor*, *Heteranthera dubia*, *Vallisneria americana*, *Potamogeton crispus*, and *Stuckenia pectinata*. This is an increase of species diversity compared to 2011 data in which only 5 species of SAV were present in District waters. A total of 203.9 acres of SAV were reported in 2013, this is a dramatic increase from 2011 when the reported acres only reached 31.41. Overall, SAV species diversity and cover densities vastly improved in 2013.

SAV beds provide an important habitat for both juvenile and adult fish in the District. Considered suitable areas for refuge, feeding, and reproduction, SAV beds are of utmost ecological importance in a watershed system (Kraus, Jones 2012). Depicting similarities between SAV cover densities and in fish diversity is an important relationship to review in District waters. Using electrofishing data collected during the months SAV is present (May-November) allows for these relationships to be compared. The electrofishing sites within the Washington Ship Channel (W1E) and adjacent to the National Airport (P2E) are of significant importance due to their close proximity to surveyed SAV beds.

While many relationships can be drawn between relative abundance of fish and the presence of SAV none are as significant as the relationship in regards to *Micropterus salmoides*, largemouth bass. Largemouth bass is an important predator in a freshwater system such as the Potomac River from an ecological and economic perspective. Largemouth bass and other piscivorous fish have been observed occupying holes within dense SAV in the Potomac River (Killgore et al., 1989). Long established as one of the country's best largemouth bass fishing regions, the Potomac River hosts many largemouth bass tournaments as well a healthy largemouth bass recreational fishery. Below are two graphs that illustrate the relationship between SAV and largemouth bass within the District.

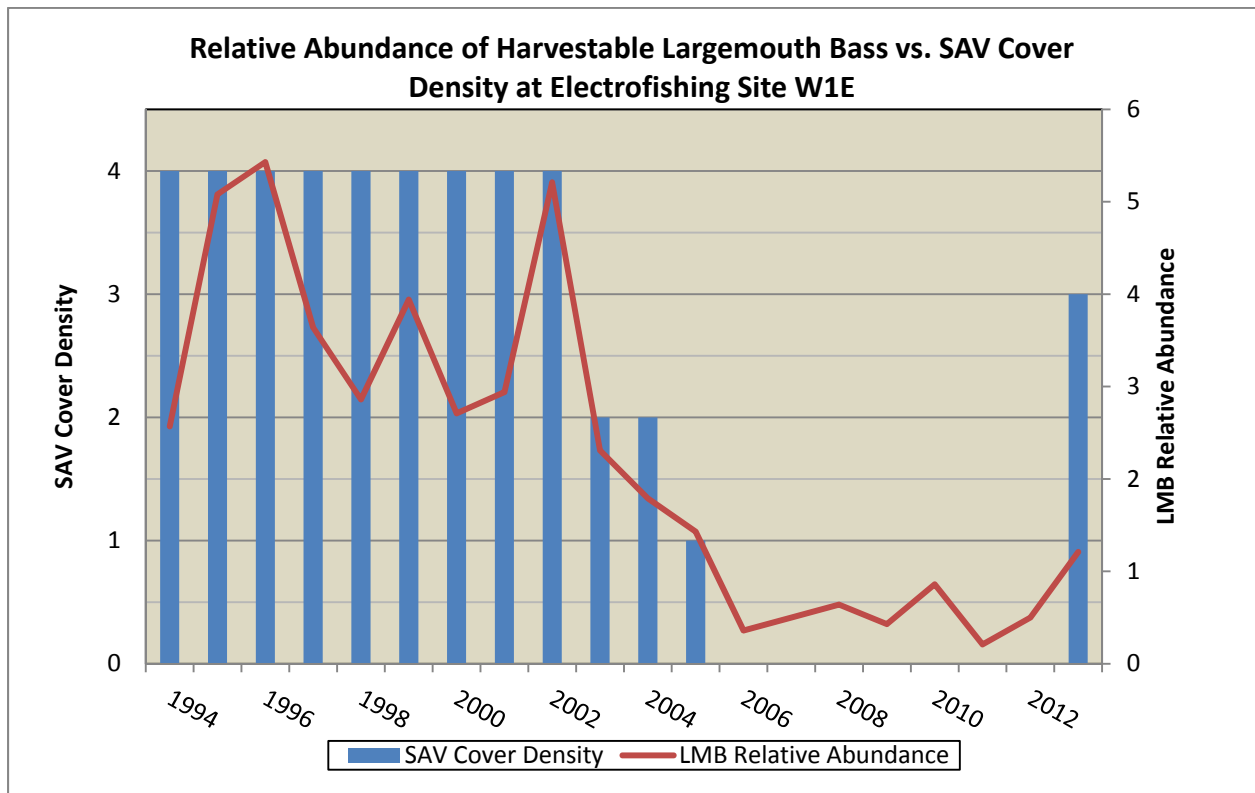

Figure 3. 1: Relative Abundance of Harvestable Largemouth Bass vs. SAV Cover Density at Site W1E

SAV cover density at electrofishing site W1E reached a 10 year high in 2013. An increase in SAV cover density also coincided with an increase of fish species diversity as well as relative abundance of harvestable largemouth bass at electrofishing site W1E. Improved habitat may have influenced the increase of harvestable largemouth bass (305mm) numbers found at W1E.

The electrofishing site at the Washington Ship Channel provided consistent data for the first nine years of this study. Figure 3.1 presents how the relative abundance numbers of harvestable largemouth bass fluctuated slightly but never approached critical levels. With the decline and disappearance of SAV from this particular site over the past nine years, the effect on the largemouth bass population is undeniable. When healthy robust grass beds are observed at this site, largemouth bass are observed as well. When the SAV is depleted or eradicated, the largemouth bass are no longer captured during electrofishing surveys. Tagging data suggests that these resident largemouth bass move to different locations where SAV or other alternative habitats are present. Even with subsequent relocation of the bass, the graph shows largemouth bass have a strong affinity to this site when SAV levels are at full saturation.

Largemouth bass may be using the increased cover density for foraging as well as shelter and reproduction. It is also apparent through Figure 3.2 that when SAV cover densities decrease

relative abundance of largemouth bass also decreases. This observation solidifies the strong relationship that largemouth bass have with the presence/absence of SAV.

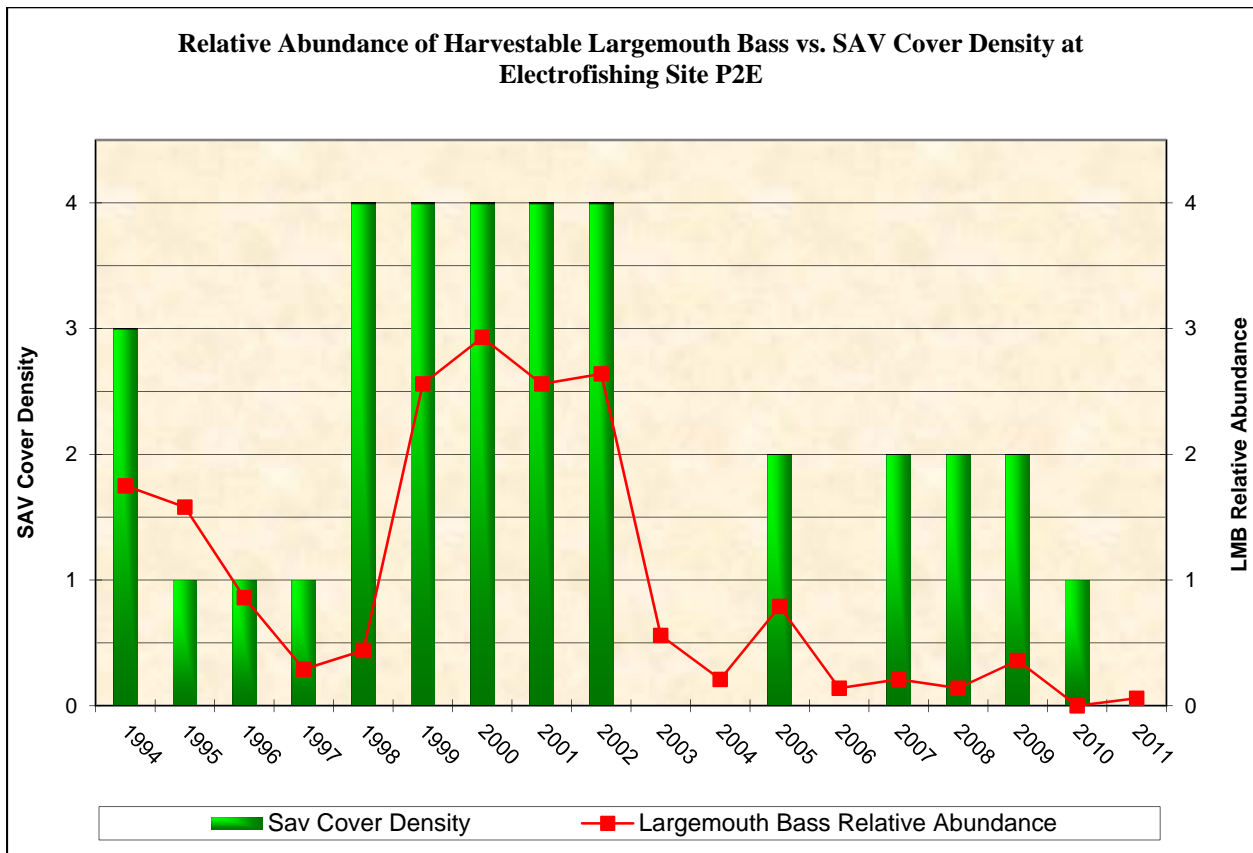

Figure 3.2: Relative Abundance of Harvestable Largemouth Bass vs. SAV Cover Density at Site P2E

MS4

Stormwater Management Highlights

Municipal Separate Storm Sewer System (MS4) Program & Permit

EPA issues the District its MS4 Permits, since the District of Columbia is not a delegated jurisdiction. EPA issued a final permit on October 7, 2011. This final permit was appealed to EPA’s Environmental Appeals Board by a coalition of environmental organizations and DC Water. The appeals primarily addressed the Permit’s TMDL Implementation Plan requirements. As a result, these provisions of the Permit were stayed pending resolution of the appeal, while the remaining majority of the sections of the Permit were in effect as of January 22, 2012. DDOE, EPA, and the appealing organizations participated in an Alternative Dispute Resolution

process in order to resolve the appeals. These appeals were successfully resolved, with all parties reaching agreement on modified permit language, which went into effect as of November 9, 2012. As a result, the District's MS4 Permit is now fully in effect. For the District, compliance with the requirements of the Permit constitutes adequate progress towards compliance with the District's WQS, and will contribute to meeting our Chesapeake Bay TMDL allocations as determined by the Chesapeake Bay Phase 5.3 Model (run in 2011).

The modified Permit contains significant changes (from the previous 2004 permit) intended to move the water quality improvement/protection efforts from smaller scale use of green infrastructure to more wide spread implementation across the District. One of the most significant changes is the requirement to modify the District's stormwater regulations to include a retention standard, which is a paradigm shift from the current regulations which require treatment and extended detention. The updated Stormwater Regulations, effective July 19, 2013, require the design, construction and maintenance of stormwater controls to achieve retention of the volume generated on a site by a 1.2 inch, 24- hour storm event for all land disturbing activities that are greater than 5,000 sf in the District. Additionally, the District's new stormwater regulations will require substantial renovation projects to retain the volume generated on a site by a 0.8 inch, 24- hour storm event. The District will allow up to 50% of the retention volume obligation to be achieved through the use of the Stormwater Retention Credit Trading Program and/or fee-in lieu program. Other key metrics that must be met during the term of the Permit include effectively retrofitting 18 million sf of impervious surface, planting a net gain of 4,150 trees in the MS4 area, and installing an additional 350,000 sf of green roofs.

Further, the District will continue to maximize its use of innovative green infrastructure practices, by leveraging the regulations and Stormwater Retention Credit Trading Program, with the use of subsidy programs, (such as RiverSmart Programs) and the stormwater fee discount program.

DDOE will continue to work proactively with other District agencies and selected federal agencies to promote LID wherever structurally and fiscally feasible. To better track these efforts, DDOE will continue to document the installation of stormwater management practices in the District, whether publicly or privately owned, report on the benefit of incentive programs implemented during the Permit term, and estimate the volume of stormwater and pollutant loading that is being removed from the MS4 system (and combined system, as relevant) in a typical year of rainfall as a result of the new stormwater regulations in the District. Although not outlined in the Permit, the District projects 2.6 million sf of green roofs will be constructed by Spring of 2015: green roof construction is expected to increase dramatically by 2017 with the full implementation of the District's revised Stormwater Management Regulations.

Other Permit highlights that will better equip the District to achieve its stormwater and TMDL goals include (but not limited to) the following measures or categories:

- Operation and maintenance of retention practices (both District owned and non-District owned);
- Management of District government areas;
- Stormwater Pollution Prevention;
- Construction activities management;
- Pesticide, herbicide, and fertilizer minimization program;
- Storm drain system operation and management of solids and floatables reduction;
- Street sweeping;
- Municipal officials training;
- Public education, participation, and outreach;
- Management of illicit discharges & improper disposal;
- Revised monitoring program; and
- Inventory and inspection of critical sources and controls.

Additionally, Permit section 4.1.4. charges DDOE to develop an incentive program to increase the quantity and quality of planted areas using such methods as permeable paving, green roofs, vegetated walls, preservation of existing trees, layering of vegetation along streets and other areas. This requirement has been addressed by the development and implementation of the Green Area Ratio into the District's Zoning Code.

Finally, the modified Permit also requires the District to develop a Consolidated TMDL Implementation Plan by May of 2015, which will include a specific schedule for ultimate attainment of all TMDL waste load allocations assigned to the District's MS4 system, with interim milestones and numeric benchmarks where more than one permit cycle is required.

In short, these and other terms contained in the 2011 Permit lend themselves to better equip the District to comply with the Chesapeake Bay TMDL and other District-adopted TMDLs, by reducing the amounts of nitrogen, phosphorous and sediment resulting from stormwater runoff throughout the District.

Beyond the Permit, the Energy Independence and Security Act Section 438 (and related EPA Guidance) calls for federal facilities to comply with 1.7 inch on-site retention standard. Per the Fact Sheet that EPA released with the Permit when it was first issued as final in October 2011, the Permit was informed by Executive Order 13508 (section 501) which directs federal agencies to implement controls on their own properties.

EPA-issued Fact Sheet references Executive Order 13514, which reiterates that the federal agencies implementing new or redevelopment projects will achieve a 1.7 inch on-site stormwater retention standard. The District will work with federal agencies to meet these requirements.

Wetlands Assessment

Development of Wetland Water Quality Standards

The development of wetland water quality standards is on going.

Integrity of Wetland Resources

No change.

Extent of Wetland Resources

No change.

Wetland Protection Activities

Efforts

The watershed protection specialists and the District's floodplain manager have worked with the wetlands specialist for the design phase of a project in a reach of Nash Run in the northeast quadrant of the District. The area has been cut and eroded down due to stormwater runoff. The watershed protection specialists have projects that include stabilizing the area eroded and preventing further erosion by stabilizing the banks and providing access to the floodplain. The wetlands specialist provides input on the project design to ensure the protection of any adjacent wetlands and to ensure water quality standards are met.

Effective Mechanism Used in Protecting Wetlands

The most effective approach used in protecting wetlands is working with the developers at the earliest stage of development. Working with developers (designers and project coordinators) allows DDOE as a regulatory agency to deal with any problematic situations before they arise. Changing paper plans in the earliest phase of development and design is much easier than changing them near the final phase.

Coordination Among DDOE Offices

WQD works with other NRA divisions to protect the District's wetland resources. FWD and WPD are commonly approached to discuss their interests in larger wetland issues. WQD routinely requests habitat information or locations of species of greatest conservation need from FWD. WPD is asked for information on their creation and restoration projects and any possible areas for wetland creation. The two divisions also work together on floodplain issues and

regenerative stormwater conveyance systems. The WQD and the SWPD work together when BMPs like trash traps are installed in the District's waterways.

PART IV: PUBLIC HEALTH - RELATED ASSESSMENTS

Drinking Water Program Monitoring & Assessments

None of the District of Columbia's waterbodies have been designated for either public water supply or drinking water uses. Though the Potomac River is the source of the District's drinking water, the intakes are located outside the District's city limits. The drinking water intakes are located at Great Falls and Little Falls, Maryland.

The District is actively participating in the Potomac River Basin Drinking Water Source Protection Partnership organized by ICPRB. The District is part of the Government committee and participates in the spill exercise programs, agricultural issues, upstream urban source water protection efforts and various emerging issues and continues to track Water Research Foundation projects. The District of Columbia completed its Source Water Assessment Project (SWAP). The primary goals of the SWAP were: (a) source delineation, (b) inventory of potential contaminants from upstream watersheds and within the basin, (c) susceptibility analysis of the inventoried contaminants identified in the source delineation and (d) providing documentation to the general public and the District of Columbia Government describing the source contaminants. Additionally, nonpoint source modeling was incorporated into the SWAP to enable the District to better understand and predict conditions within the basin that might pose a threat to the water supply.

The Potomac Drinking Water Source Protection Partnership's Emerging Contaminants Workgroup is tracking and reporting on findings of research and occurrence of persistent and newly identified threats posed to the Potomac River drinking water supply. Members of the partnership also advocate and support related national-level studies with the goal of providing sound science on how this emerging challenge should be addressed. Some of the specific partnership activities include communication with the public about drinking water contaminants, proper disposal of pharmaceuticals, emerging contaminants challenges and sampling program. The partnership is also conducting a workshop on hazardous algal blooms in source waters. The workshop will focus on monitoring, identification, associated health risks, how to stop outbreaks, best management practices and serve as an educational opportunity for the water operators.

Drinking water is treated by the Washington Aqueduct which is owned and operated by the US Army Corps of Engineers. The Aqueduct is responsible for compliance with all of the regulations which pertain to water treatment such as filtration, disinfection and chemical contaminant removal, and corrosion control. DC Water purchases the treated water and distributes it to District residents. Drinking water quality is regulated by US EPA Region 3. The District of Columbia does not have primacy. Persons seeking information (beyond what is

provided below) on the status of lead in drinking water or other compliance issues in the District of Columbia should consult the US EPA website at <http://www.epa.gov/dclead>.

Fish Tissue Study

In June 2013, US FWS began a fish tissue study for DDOE, on fish caught in the Anacostia and Potomac Rivers within the boundaries of the District of Columbia.

DDOE will compare chemical concentrations from fish tissue studies conducted in 1994, 1996, 2001, and 2009 with 2013. Polychlorinated biphenyls (PCBs) and polycyclic aromatic hydrocarbons (PAHs) consistently exceed the screening value in each study (1994, 1996, 2001 and 2009), 0.2 ppm for PCBs and 0.005 for PAHs, which triggers a fish consumption advisory. Due to the existence of a fish consumption advisory for fish caught in District's portion of the Anacostia and Potomac River the Class C (protection of human health) designation is not supported.

Anacostia River Algal Bloom

DDOE responded to two algae bloom events reported during the last reporting period. The first algae bloom was reported by the Anacostia Riverkeeper in July of 2013 for a section of the upper Anacostia River. DDOE staff observed patches of brown foamy scum on the surface of the Anacostia River between the New York Avenue Bridge and the Benning Road Bridge. The patches of scum were typically no larger than a few inches (2-3 inches) in diameter and a thinner, brown pollen-like substance was noted to usually be present on the surface of the water near the patches of scum. The scum was photographed and sampled for analysis on July 18 and July 24, 2013. DDOE staff analyzed live and preserved samples using a light microscope and did not observe any algal species at bloom abundances. In addition, DDOE delivered samples for analysis to local experts at Gallaudet University and the Interstate Commission for the Potomac River Basin (ICPRB). No single species could be identified at bloom abundances or directly linked to the brown foamy scum observed on the surface of the Anacostia River. Weather conditions during July were hot and water temperature readings during algae sampling were greater than 27°C, creating conditions well suited for algal growth. Chlorophyll A values measured ranged from approximately 10-20 ug/L within the sampling area, which was not significantly higher than typical values observed during the summer season.

There was an algae bloom event on the National Mall in August 2013. According to media reports, over one thousand deceased fish were observed in Constitution Gardens Pond. DDOE respond to the event to assist the National Park Service investigation. DDOE staff observed bright green coloration in the water of the Constitution Gardens Pond. Additionally, stringy green and white filament was observed on the surface of the water. DDOE photographed and sampled the waterbody. Live and preserved samples were analyzed by DDOE staff using a light

microscope. DDOE staff identified the most abundant taxon as *Anabaena* and the identification was later verified by experts using micrographs taken by DDOE staff. The *Anabaena* genus includes several different species of cyanobacteria, also known as blue-green algae. Species within the *Anabaena* genus are known to be capable of producing toxins such as microcystin, which does have the possibility to present human health risks or other environmental issues. The United States National Guard 33rd Civil Support Team coordinated with the National Park Service and the DDOE Chief of Emergency Operations to conduct chemical analysis of the waters at Constitution Gardens as a part of the response effort. The chemical analysis revealed the presence of 9-Octadecenamide (Oleamide) which is reported to be a toxic fatty acid produced by the alga *Prymnesium parvum*. Water temperature values measured were greater than 24°C, creating favorable conditions for algal growth. Chlorophyll A levels ranged from 20-32 ug/L and Blue-green algae levels ranged from 6-7 ug/L.

DDOE has begun a partnership with the National Oceanic and Atmospheric Administration (NOAA) to enhance the identification capacity of phytoplankton within the District of Columbia. This new partnership between DDOE and the NOAA Phytoplankton Monitoring Network (PMN) allows submission of preserved samples to trained experts for phytoplankton identification and verification.

PART V: GROUNDWATER ASSESSMENT

Introduction

This section updates the District's groundwater assessment and protection efforts for January, 2012 to December, 2013. Several changes have occurred since the 2012 Integrated Report. The most significant are the development of two reports on groundwater by the United States Geological Survey (USGS) for DDOE; the establishment of regulatory restrictions on stormwater infiltration BMPs at contaminated sites; the creation of a new Remediation and Site Response Program to address contaminant issues at regulated sites; and the investigation of the paleohistory of the Anacostia River.

Summary of Groundwater Quality

The District's groundwater monitoring network continues to be maintained in the Anacostia River and Rock Creek Park watersheds. The wells are listed in Appendix 5.1 and their locations are shown in Appendix 5.2. Groundwater elevation data were collected in October 2012 and January 2013 (Appendix 5.3) while the Kenilworth Aquatic Gardens tide gage was monitored every six minutes. Appendix 5.4 contains a compressed graphical display of the tide gage data from 2004 to 2013. Due to limited funding, plans to re-sample the full groundwater monitoring network were cancelled and only two rounds of groundwater elevation data were collected. Monitoring data continue to be available at the DDOE and USGS websites.

In 2014, DDOE in cooperation with USGS will publish a Scientific Investigations Report (SIR) summarizing the hydrogeology and shallow groundwater quality in the tidal Anacostia River watershed in Washington, D.C. The SIR will include a review of historic and current groundwater conditions, new lithologic cross-sections along the Anacostia River and a discussion of the significance of these interpretations for surface water.

Overview of Groundwater Contamination Sources

Appendix 5.5 lists the major sources of groundwater contamination in the District. No new major sources have been identified within this reporting period.

Overview of Groundwater Protection Programs

DDOE is the primary environmental protection agency in the District of Columbia. The WQD is the body charged with administration of the District of Columbia Water Pollution Control Act, which defines the District's waters as both groundwater and surface water.

In 1993, groundwater regulations were promulgated. Through these regulations, numerical criteria and enforcement standards for forty-seven constituents were established. Later, the District also developed water quality monitoring regulations that set standards for groundwater monitoring supporting preventive as well as remedial activities. Well regulations have been under development for several years and currently are undergoing internal review. DDOE hopes that these regulations will be promulgated in 2014

Since the last 305(b), DDOE has added the Remediation and Site Response Program to the list of programs responsible for contaminated site investigation and remediation. The program exercises state CERCLA-like authority and focuses on historic hazardous releases to soil and water. Some groundwater-related programs within the DDOE and their functions are as follows:

- **Voluntary Cleanup Program:** The Voluntary Cleanup Program (VCP) is a part of the Environmental Protection Administration. Unlike the media-specific programs that require mandatory cleanup of contaminated property, VCP oversees owner or developer initiated voluntary remediation of contaminated lands and buildings that return actual or potentially contaminated properties to productive uses.
- **Remediation and Site Response Program:** The RSRP is a relatively new program in the same administration as the VCP. It is responsible for investigation and remediation at sites with historic contaminant releases.
- **Construction Grants Program:** Pursuant to the Clean Water and the Safe Drinking Water Acts and various appropriations acts, the US EPA provides and anticipates providing in the future as authorized, funding through the award of assistance grants to the District of Columbia. These assistance awards enable the District to perform construction and/or improvement of wastewater facilities, drinking water distribution and storage facilities and other water related structures. The overall objective of the grant-funded program is to select and fund projects that will protect the quality of water in the District of Columbia. The projects are identified to meet a variety of needs (i.e., Combined Sewer Overflow Long Term Control Plan (LTCP), Municipal Sanitary Storm Sewer Monitoring Network, and the implementation of pollution control measures, and the protection of the public and safety).

- Federal Facilities Program: The Federal Facilities Program oversees the cleanup of Formally Used Defense Sites (FUDS) and currently active defense facilities that are contaminated.
- Hazardous Waste Management Program: The program regulates hazardous waste small and large quantity generators.
- Integrated Pest Management Program: The program conducts public education for pesticide use.
- Nonpoint Source Program: The program plans and implements BMPs, provides oversight of nonpoint source studies.
- Pesticide Certification and Enforcement Program: The program processes registration of pesticide products for use in the District of Columbia, certifies applicators and performs application inspection.
- Stormwater Management Program: The program reviews stormwater management plans and performs compliance inspections.
- TMDL: The program develops point and nonpoint source load allocations to meet water quality standards in impaired waterbodies.
- Underground Storage Tank Management Program: The program provides oversight for installation and removal of underground storage tanks as well as remedial activities for leaking tanks.
- Water Quality Planning and Permitting: The program coordinates water quality planning and research including groundwater quality research.
- Appendix 5.6 provides additional information regarding the District's groundwater protection programs.

Aquifer Vulnerability Assessment

The District of Columbia's groundwater vulnerability to contamination was assessed in 1992 by the DC Water Resources Research Center (WRRC) in a report entitled Urban Land Use Activities and The Ground Water: A Background Survey of the District of Columbia (WRRC, 1992). The probability of groundwater contamination was mapped and ranked accordingly. The District recognizes that this report is old and when funds are identified, it will be revised.

Aquifer Mapping

The District in conjunction with the USGS has developed a steady-state three-dimensional groundwater flow model of the shallow aquifers in the Anacostia River watershed. The model results will be published by USGS in FY 2014.

Comprehensive Data Management System

All data collected during the joint District-USGS projects since 2002 have been maintained and managed by the USGS. This data is readily available on the USGS website (www.usgs.gov) and will continue to grow as more projects are funded. This data includes chemical, locational, and geological information. Monitoring well data are included in the regional groundwater database maintained by the USGS for the District and other states, and will be available in GIS formats in the near future.

Summary of Groundwater Contamination Sources

Appendix 5.7 summarizes contaminant sources to the shallow groundwater aquifer. No new major sources have been identified since the 2012 Integrated Report. More importantly, the potential for contamination in surface soils to leach down into the shallow aquifer have been reduced due to the District's new stormwater regulations. These regulations restrict the installation of a stormwater infiltration system in an area with contaminated soil or groundwater. In such an area, DDOE may prohibit the installation of the device or limit its use by requiring an impermeable liner.

Groundwater/Surface Water Interaction

In 2014, DDOE in cooperation with USGS will publish a report about a new regional, steady-state, three-dimensional, groundwater flow model. The model is primarily designed to determine the rate and pattern of groundwater flow to the Anacostia River. It is based upon information collected in the District and vicinity for the Anacostia River watershed and from surrounding watersheds. The model will become a useful tool for groundwater resource management.

DDOE continues to investigate the paleohistory of the Anacostia River and the potential for old river channels also known as, paleochannels, to affect groundwater flow physically and chemically in localized areas. While identifying fluvial paleochannels can be a complex task, the potential for them to become unexpected pathways for contaminant plumes to migrate to the river is a real possibility since many shoreline facilities are recognized contaminated sites.

In 2012 and 2013, as part of a joint DDOE-USGS project, USGS personnel visited several sites and collected samples from deep borehole cores for pollen analyses. These analyses are being

used for age-dating of sediments deposited in ancient riverine environments and will help to unravel the river's erosional and depositional history.

Detail Report for ANACOSTIA DC

ID: DCANA00E_01

State: DC - 2014

Single Cat.(User Cat.): 5(DC
- 4A)

Water Information:	ANACOSTIA DC	
	Location: PENNSYLVANIA AVENUE BRIDGE TO THE MOUTH AT THE POTOMAC (ANA15 TO ANA29), TIDAL FRESHWATER. IT FLOWS THROUGH A HIGHLY URBAN AREA OF MARINAS, COMMERCIAL BUILDINGS AND NATIONAL PARKLAND.	Water Type: ESTUARY Size: 0.5 SQUARE MILES Next Scheduled Monitoring Date: N/A
Use Information		
Assessed:	Attainment Status	Uses
	Fully Supporting	Navigation Protection and Propagation of Fish, Shellfish and Wildlife
	Not Supporting	Primary Contact Recreation Protection of Human Health related to Consumption of Fish and Shellfish Secondary Contact Recreation and Aesthetic Enjoyment

Types of Assessment

Assessment Type	Uses	Assessment Confidence
HABITAT	Navigation	GOOD
PHYSICAL/CHEMICAL	Protection and Propagation of Fish, Shellfish and Wildlife Secondary Contact Recreation and Aesthetic Enjoyment	GOOD GOOD
PATHOGEN INDICATORS	Primary Contact Recreation	GOOD

Cause Information

Causes	Associated Uses	Pollutant? Confidence
Arsenic	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
Chlordane	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
Copper	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
DDD	Protection of Human Health related to Consumption of Fish and Shellfish	Yes

DDE	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
DDT	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
Debris/Floatables/Trash	Secondary Contact Recreation and Aesthetic Enjoyment	Yes
Dieldrin	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
Fecal Coliform	Primary Contact Recreation	Yes
Heptachlor epoxide	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
Polychlorinated biphenyls	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
Polycyclic Aromatic Hydrocarbons (PAHs) (Aquatic Ecosystems)	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
Total Suspended Solids (TSS)	Secondary Contact Recreation and Aesthetic Enjoyment	Yes
Zinc	Protection of Human Health related to Consumption of Fish and Shellfish	Yes

Comments On:

Overall Assessment

**(USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.

THE LOWER ANACOSTIA'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 19.23%, 1.08%, AND 8.99% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE

GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE WAS NOT SUPPORTED. THE LOWER ANACOSTIA RIVER IS IMPAIRED BY TRASH. PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 1.08% AND 8.99% OF THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE IS SUPPORTED. TEMPERATURE, PH, DISSOLVED OXYGEN, AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0%, 1.08%, 6.38% AND 8.99% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY, THE LOWER ANACOSTIA DID NOT SUPPORT ITS FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE D.C. COMMISSIONER OF PUBLIC HEALTH. THE ADVISORY URGES NON-CONSUMPTION OF CATFISH, CARP OR EEL AND LIMITED CONSUMPTION OF OTHER FISH CAUGHT IN ALL DISTRICT OF COLUMBIA WATERS.

THE LOWER ANACOSTIA FULLY SUPPORTED ITS NAVIGATION USE.

BECAUSE OF THE ABOVE USE DECISIONS, THIS SEGMENT DID NOT SUPPORT THE OVERALL USE SUPPORT CLASSIFICATION.

Detail Report for ANACOSTIA DC

ID: DCANA00E_02

State: DC - 2014

Single Cat.(User Cat.): 5(DC
- 4A, 5)

Water Information:	ANACOSTIA DC	
	Location: NEW YORK AVE BRIDGE (DC/MARYLAND LINE) TO PENNSYLVANIA AVENUE BRIDGE (ANA01 TO ANA15), TIDAL FRESHWATER. IT FLOWS THROUGH MOSTLY NATIONAL AND CITY PARK LAND AND PAST A SMALL URBAN AREA OF RESIDENTIAL BUILDINGS, PEPCO, RFK STADIUM AND MARINA.	Water Type: ESTUARY Size: 0.3 SQUARE MILES Next Scheduled Monitoring Date: N/A

Comments On:

Overall Assessment

**(USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF

303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.

THE UPPER ANACOSTIA'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 29.17%, 2.33%, AND 37.17% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE WAS NOT SUPPORTED. THE UPPER ANACOSTIA RIVER IS IMPAIRED BY TRASH. PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 2.33% AND 37.17% OF THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE SUPPORT IS NOT SUPPORTED. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0%, 2.33%, 13.11% AND 37.17% OF THE TIME, RESPECTIVELY.

BECAUSE OF THE FISH CONSUMPTION ADVISORY, THIS SEGMENT DID NOT SUPPORT THE FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE D.C. COMMISSIONER OF PUBLIC HEALTH. THE ADVISORY URGES NON-CONSUMPTION OF CATFISH, CARP OR EEL AND LIMITED CONSUMPTION OF OTHER FISH CAUGHT IN ALL DISTRICT OF COLUMBIA WATERS.

THE UPPER ANACOSTIA FULLY SUPPORTED ITS NAVIGATION USE.

BECAUSE OF THE ABOVE USE DECISIONS, THIS SEGMENT OF THE ANACOSTIA DID NOT SUPPORT THE OVERALL USE SUPPORT CLASSIFICATION.

Detail Report for BATTERY KEMBLE CREEK

ID: DCTBK01R_00

State: DC - 2014

Single Cat.(User Cat.): 5(DC
- 3,4A)

Water Information:	BATTERY KEMBLE CREEK	
	Location: ORIGINATES AT NEBRASKA AVENUE AND FOXHALL ROAD. THE WATERSHED'S NORTHWESTERN BORDER IS UNIVERSITY TERRACE AND THE WESTERN EDGE OF BATTERY KEMBLE PARK.. THE EASTERN BORDER IS FOXHALL ROAD AND THE SOUTHERN BORDER IS NORTH OF W STREET, NW.	Water Type: RIVER Size: 1.2 MILES Next Scheduled Monitoring Date: N/A
Use Information		
Assessed:	Attainment Status	Uses
	Fully Supporting	Secondary Contact Recreation and Aesthetic Enjoyment
	Not Supporting	Primary Contact Recreation Protection and Propagation of Fish, Shellfish and Wildlife Protection of Human Health related to Consumption of Fish and Shellfish

Types of Assessment

Assessment Type	Uses	Assessment Confidence
PHYSICAL/CHEMICAL	Protection and Propagation of Fish, Shellfish and Wildlife	GOOD
	Protection of Human Health related to Consumption of Fish and Shellfish	GOOD
	Secondary Contact Recreation and Aesthetic Enjoyment	GOOD
PATHOGEN INDICATORS	Primary Contact Recreation	GOOD

Cause Information

Causes	Associated Uses	Pollutant? Confidence
Arsenic	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
Copper	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
Fecal Coliform	Primary Contact Recreation	Yes
Polychlorinated biphenyls	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
Zinc	Protection of Human Health related to	Yes

Observed Effects

Observation

Benthic-Macroinvertebrate
Bioassessments

Associated Uses

Protection and Propagation of Fish, Shellfish and Wildlife

Comments On:

Overall Assessment

**(USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.

BATTERY KEMBLE'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 23.53%, 0.0% AND 5.0% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE IS SUPPORTED. PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0% AND 5.0% OF THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE IS NOT SUPPORTED. THE DECISION IS BASED ON THE DC STREAM SURVEY CONDUCTED IN 2002 AND CONVENTIONAL POLLUTANT DATA. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0%, 0.0%, 0.0% AND 5.0% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY, BATTERY KEMBLE DID NOT

SUPPORT ITS FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE D.C. COMMISSIONER OF PUBLIC HEALTH.

NAVIGATION IS NOT A DESIGNATED USE.

BECAUSE OF THE ABOVE USE DECISIONS, THIS SEGEMENT DID NOT SUPPORT THE OVERALL USE SUPPORT CLASSIFICATION.

DURING THE 2010 AND 2012 STREAM ASSESSMENTS THERE WAS ALGAE ON ROCKS, VERY LITTLE AQUATIC LIFE OBSERVED AND THE ODOR OF CHLORINE PRESENT.

MACROINVERTEBRATE SAMPLES WERE COLLECTED FOR 2010 AND 2012, THEY WILL BE ANALYZED AT A LATER DATE.

Detail Report for BROAD BRANCH

ID: DCTBR01R_00

State: DC - 2014

Single Cat.(User Cat.): 5(DC
- 4A, 5)

Water Information:	BROAD BRANCH	
	Location: BROAD BRANCH IS A WESTERN TRIBUTARY OF ROCK CREEK WHICH IS JOINED BY SOAPSTONE CREEK ABOUT 800 FEET BEFORE IT DISCHARGES INTO ROCK CREEK. THE SURFACE PORTION OF THE STREAM BEGINS NEAR NEBRASKA AND CONNECTICUT AVENUES.	Water Type: RIVER Size: 1.7 MILES Next Scheduled Monitoring Date: N/A
Use Information		
	Attainment Status	Uses
Assessed:	Fully Supporting	Secondary Contact Recreation and Aesthetic Enjoyment
	Not Supporting	Primary Contact Recreation Protection and Propagation of Fish, Shellfish and Wildlife Protection of Human Health related to Consumption of Fish and Shellfish

Comments On:

Overall Assessment

**(USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.

BROAD BRANCH'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 87.50%, 5.0% AND 10.0% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE IS SUPPORTED. PH AND TURBIDITY VIOLATES THE WATER QUALITY STANDARDS 5.0% AND 10.0% OF THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE IS NOT SUPPORTED. THE DECISION IS BASED ON THE DC STREAM SURVEY CONDUCTED IN 2010 AND CONVENTIONAL POLLUTANT DATA. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0%, 5.0%, 0.0% AND 10.0% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY, BROAD BRANCH DID NOT SUPPORT ITS FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED

ON NOVEMBER 15, 1994, BY THE D.C. COMMISSIONER OF PUBLIC HEALTH.

BROAD BRANCH WAS NOT ASSESSED FOR NAVIGATION.

BECAUSE OF THE ABOVE USE DECISIONS, THIS SEGMENT DID NOT SUPPORT THE OVERALL USE SUPPORT CLASSIFICATION.

THE 2011 AND 2013 DCSS REVEALED DENSE BROWN MACROPHYTES AND ALGAL GROWTH, DOWNED TREES ON STREAMBED. THERE WERE HEAVY RAINS DURING THE 2011 ASSESSMENT PERIOD.

IN 2011 AND 2013 MACROINVERTEBRATE SAMPLES WERE COLLECTED AND WILL BE ANALYZED AT A LATER DATE.

THE 2010 MACROINVERTEBRATE ASSESSMENT (SAMPLES COLLECTED IN 2009) REVEALED CHIRONOMIDAE AS THE DOMINANT TAXA. TRICHOPTER WERE ALSO PRESENT.

REPORTS WITH MORE INFORMATION INCLUDE:

*ANALYSIS OF BIOLOGICAL SAMPLES: DISTRICT OF COLUMBIA PHYTOPLANKTON, ZOOPLANKTON AND BENTHIC MACROINVERTEBRATE SAMPLES, RHITHRON ASSOCIATES, OCTOBER 2010.

Comments On:

Overall Assessment

**** (USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.**

DALECARLIA'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 58.82%, 0.0% AND 9.52% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT

ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE IS SUPPORTED. PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0% AND 9.52% OF THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE SUPPORT IS NOT SUPPORTED. THE DECISION IS BASED ON THE DC STREAM SURVEY CONDUCTED IN 2010 AND CONVENTIONAL POLLUTANT DATA. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0%, 0%, 0.0% AND 9.52% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY, DALECARLIA DID NOT SUPPORT ITS FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE D.C. COMMISSIONER OF PUBLIC HEALTH.

DALECARLIA WAS NOT ASSESSED FOR NAVIGATION.

BECAUSE OF THE ABOVE DECISIONS, THIS SEGMENT DID NOT SUPPORT THE OVERALL USE SUPPORT CLASSIFICATION.

THE HBI SCORE SUGGESTS SEVERE ORGANIC POLLUTION IN THE STREAM. NO SENSITIVE ORGANISMS WERE FOUND (EPT). HABITAT IS MODERATELY IMPAIRED. 73 CHIRONOMIDAE (TOLERANT GENERALIST) WERE FOUND. WITH 73 CHIRONOMIDAE BEING PRESENT, THIS MAY POSSIBLY SUGGEST A STREAM THAT IS IMPACTED WITH TOXICS AND ORGANICS. MORE THAN 100 ORGANISMS FOUND IN THE SAMPLE.

THE 2010 MACROINVERTEBRATE ASSESSMENT (SAMPLES COLLECTED IN 2009) REVEALED CHIRONOMIDE AS THE DOMINANT TAXA. THERE WAS VERY LITTLE DIVERSITY AMONG BENTHIC MACROINVERTEBRATE SPECIES.

DURING THE 2011 AND 2013 DCSS SEVERE BUFFER BREAK ON THE LEFT AND RIGHT BANKS, AND EROSION ON THE RIGHT BANK, WITH EXPOSED ROOT WADS FOR THE ENTIRE 75 METER STRETCH WERE OBSERVED. A STRONG ODOR OF CHLORINE WAS PRESENT. THERE WAS A HIGH VOLUME OF TRASH PRESENT.

IN 2011 AND 2013 MACROINVERTEBRATES WERE COLLECTED AND WILL BE ANALYZED AT A LATER DATE.

REPORTS WITH MORE INFORMATION INCLUDE:

*ANALYSIS OF BIOLOGICAL SAMPLES: DISTRICT OF COLUMBIA
PHYTOPLANKTON, ZOOPLANKTON AND BENTHIC MACROINVERTEBRATE
SAMPLES, RHITHRON ASSOCIATES, OCTOBER 2010.

Overall Assessment

**** (USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.**

FENWICK BRANCH'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 25.0%, 0.0% AND 5.26% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE

21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE IS SUPPORTED. PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0% AND 5.26% OF THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE SUPPORT IS NOT SUPPORTED. THE DECISION IS BASED ON THE DC STREAM SURVEY CONDUCTED IN 2010 AND CONVENTIONAL POLLUTANT DATA. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0%, 0.0%, 0.0% AND 5.26% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY, FENWICK BRANCH DID NOT SUPPORT ITS FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE D.C. COMMISSIONER OF PUBLIC HEALTH.

FENWICK BRANCH WAS NOT ASSESSED FOR NAVIGATION.

BECAUSE OF THE ABOVE USE DECISIONS, THIS SEGMENT DID NOT SUPPORT THE OVERALL USE SUPPORT CLASSIFICATION.

THE 2010 MACROINVERTEBRATE ASSESSMENT WHICH WAS COLLECTED DURING THE 2009 DCSS SAMPLING SEASON REVEALED CHIRONOMIDAE AS THE DOMINANT TAXA. TRICHOPERTA WERE PRESENT.

DURING THE 2013 DCSS SEVERE EROSIONS ON BOTH BANKS AND EROSION SCARS ON THE LEFT BANK WERE OBSERVED. THE STREAM HAS LOW FLOW AND DOWNED TREES IN THE STREAMBED.

DURING THE 2011 DCSS TWO LARGE DOWNED TREES, ONE EACH, AT THE 20 AND 75 METER MARKS OBSERVED. GULLY DRAINS E. BEACH DR. INTO STREAM. HEAVY RAINS DURING THE 2011 ASSESSMENT PERIOD. EXTENSIVE SAND, SILT, AND CLAY FOR THE ENTIRE 75 METER STRETCH. BANK EROSION PRESENT, BUT DIFFICULT TO SEE SEVERITY DUE TO HEAVY VEGETATION. DEEP POOLS PRESENT IN PORTIONS OF THE STREAM. FLOATING SAV OBSERVED.

IN 2011 AND 2013 MACROINVERTEBRATE SAMPLES WERE COLLECTED AND WILL BE ANALYZED AT A LATER DATE.

REPORTS WITH MORE INFORMATION INCLUDE:

*ANALYSIS OF BIOLOGICAL SAMPLES: DISTRICT OF COLUMBIA PHYTOPLANKTON, ZOOPLANKTON AND BENTHIC MACROINVERTEBRATE

SAMPLES, RHITHRON ASSOCIATES, OCTOBER 2010.

Detail Report for FORT CHAPLIN RUN

ID: DCTFC01R_00

State: DC - 2014

Single Cat.(User Cat.): 5(DC
- 4A, 5)

Water Information:	FORT CHAPLIN RUN	
	Location: FORT CHAPLIN ORIGINATES AS A 6.5 FOOT DIAMETER STORM PIPE NEAR BURNS STREET AND TEXAS AVENUE, SE.	Water Type: RIVER Size: 0.6 MILES Next Scheduled Monitoring Date: N/A
Use Information		
Assessed:	Attainment Status	Uses
	Not Supporting	Primary Contact Recreation Protection and Propagation of Fish, Shellfish and Wildlife Protection of Human Health related to Consumption of Fish and Shellfish Secondary Contact Recreation and Aesthetic Enjoyment

Types of Assessment

Assessment Type	Uses	Assessment Confidence
PHYSICAL/CHEMICAL	Protection and Propagation of Fish, Shellfish and Wildlife	GOOD
	Protection of Human Health related to Consumption of Fish and Shellfish	GOOD
	Secondary Contact Recreation and Aesthetic Enjoyment	GOOD
PATHOGEN INDICATORS	Primary Contact Recreation	GOOD

Cause Information

Causes	Associated Uses	Pollutant? Confidence
Arsenic	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
Dissolved oxygen saturation	Protection and Propagation of Fish, Shellfish and Wildlife	Yes
Fecal Coliform	Primary Contact Recreation	Yes
Physical substrate habitat alterations	Protection and Propagation of Fish, Shellfish and Wildlife	No
Polychlorinated biphenyls	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
Total Suspended Solids	Primary Contact Recreation	Yes

(TSS)	Protection and Propagation of Fish, Shellfish and Wildlife Secondary Contact Recreation and Aesthetic Enjoyment	
Turbidity	Primary Contact Recreation Protection and Propagation of Fish, Shellfish and Wildlife Secondary Contact Recreation and Aesthetic Enjoyment	Yes

Comments On:

Overall Assessment

**** (USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.**

FORT CHAPLIN'S EVALUATION OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 50.0%, 0.0% AND 15.79% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT

ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE IS NOT SUPPORTED. PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0% AND 15.79% OF THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE SUPPORT IS NOT SUPPORTED. THE DECISION IS BASED ON THE DC STREAM SURVEY CONDUCTED IN 2002 AND CONVENTIONAL POLLUTANT DATA. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0%, 0.0%, 15.0% AND 15.79% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY, FORT CHAPLIN DID NOT SUPPORT ITS FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE D.C. COMMISSIONER OF PUBLIC HEALTH.

NAVIGATION IS NOT A DESIGNATED USE.

BECAUSE OF THE ABOVE USE DECISIONS, THIS SEGMENT DID NOT SUPPORT THE OVERALL USE SUPPORT CLASSIFICATION.

2002 HBI SCORE SUGGESTS FAIRLY SIGNIFICANT ORGANIC POLLUTION. A HIGH PERCENTAGE OF GATHERER-COLLECTOR ORGANISMS SUGGESTS POLLUTANTS, BECAUSE THEY ARE GENERALIST AND CAN THRIVE IN POLLUTED WATERS. THE DOMINANT TAXA WAS OLIGOCHAETA (SEWAGE LOVING ORGANISMS). 47 ORGANISMS WERE FOUND IN THE SAMPLE. THE STREAM'S HABITAT IS SEVERELY IMPAIRED. THE EROSION IS RAPIDLY DESTROYING THIS STREAM. THERE IS A NEED FOR IMMEDIATE ACTION TO SLOW THE EROSION OF THE STEAMS BANKS.

DURING THE 2010 AND 2012 HABITAT ASSESSMENT COPIOUS AMOUNTS OF TRASH AND DEBRIS PRESENT. MOLTING SOIL OBSERVED, LOTS OF YOUNG AND MATURE TREES WERE DOWNED. THERE WAS BANK EROSION ON BOTH BANKS, POOLS OF IRON FLOCCULANT AND YARD CLIPPINGS PRESENT.

Detail Report for FORT DAVIS TRIBUTARY

ID: DCTFD01R_00

State: DC - 2014

Single Cat.(User Cat.): 5(DC - 4A, 5)

Water Information:	FORT DAVIS TRIBUTARY	
	Location: FORT DAVIS IS A TRIBUTARY OF THE ANACOSTIA RIVER OF WHICH THE SURFACE PORTION PARALLELS PENNSYLVANIA AVENUE BEGINNING AT ALABAMA AVENUE AND SUBMERGES FOR THE REMAINDER OF ITS COURSE AT PENNSYLVANIA AVENUE ABOVE BRANCH AVENUE. Comments On:

Overall Assessment

**(USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.

FORT DAVIS' EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 43.75%, 0.0% AND 44.44% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE IS NOT SUPPORTED. PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0% AND 44.44% OF THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE SUPPORT IS NOT SUPPORTED. THE DECISION IS BASED ON THE DC STREAM SURVEY CONDUCTED IN 2002 AND

CONVENTIONAL POLLUTANT DATA. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0%, 0.0%, 16.67% AND 44.44% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY, FORT DAVIS DID NOT SUPPORT ITS FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE D.C. COMMISSIONER OF PUBLIC HEALTH.

NAVIGATION IS NOT A DESIGNATED USE.

BECAUSE OF THE ABOVE DECISIONS, THIS SEGMENT DID NOT SUPPORT THE OVERALL USE SUPPORT CLASSIFICATION.

DURING THE 2012 MACROINVERTEBRATE AND PHYSICAL HABITAT ASSESSMENTS DEBRIS HAD BEEN REMOVED FROM PIPED PORTION OF THE STREAM. STREAM FLOW WAS IMPROVED AND THERE WAS A MORE DEFINED STREAMBED. THERE WERE BUFFER BREAKS ON BOTH BANKS. THE ENTIRE 75 METER STRETCH WAS SAMPLEABLE.

THE 2010 STREAM ASSESSMENT REVEALED NO DEFINED STREAM BED, AND IMPASSABLE BEYOND THE 45M STRETCH.

IN 2010 AND 2012 MACROINVERTEBRATE SAMPLES WERE COLLECTED, THEY WILL BE ANALYZED AT A LATER DATE.

THE DOMINANT TAXA AND ONLY TAXA FOUND WAS A SINGLE OLIGOCHAETA (SEWAGE LOVING ORGANISM). EROSION ON THE RIGHT AND LEFT BANKS WERE SEVERE. BANK EROSION MAY HAVE BEEN THE WORST OUT OF ALL THE STREAMS IN THE COASTAL REGION. THE ENTIRE STREAM WAS FILLED WITH A REDDISH COLOR THAT IS THE SAME COLOR AS THE SILT OR CLAY IN THE STREAMBED.

Detail Report for FORT DUPONT CREEK

ID: DCTDU01R_00

State: DC - 2014

Single Cat.(User Cat.): 5(DC
- 3,4A)

Water Information:	FORT DUPONT CREEK	
	Location: THE STREAM AT FORT DUPONT PARK IS A MINOR TRIBUTARY OF THE ANACOSTIA RIVER WHICH ORIGINATES AT FORT DUPONT NEAR ALABAMA AND MASSACHUSETTS AVENUES, SE.	Water Type: RIVER Size: 1.7 MILES Next Scheduled Monitoring Date: N/A

Comments On:

Overall Assessment

** (USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.

FORT DUPONT'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 27.78%, 0.0% AND 15.79% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE IS NOT SUPPORTED. PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0% AND 15.79% OF THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE SUPPORT IS NOT SUPPORTED. THE DECISION IS

BASED ON THE DC STREAM SURVEY CONDUCTED IN 2002 AND CONVENTIONAL POLLUTANT DATA. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0%, 0.0%, 10.0% AND 15.79% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY, FORT DUPONT DID NOT SUPPORT ITS FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE D.C. COMMISSIONER OF PUBLIC HEALTH.

NAVIGATION IS NOT A DESIGNATED USE.

BECAUSE OF THE ABOVE DECISIONS, THIS SEGMENT DID NOT SUPPORT THE OVERALL USE SUPPORT CLASSIFICATION.

THE 2012 MACROINVERTEBRATE AND PHYSICAL HABITAT ASSESSMENTS REVEALED SEDIMENT, IRON FLOCCULANT AND AN ORANGE TINT IN THE STREAM BED. THERE WAS A BUFFER BREAK ON THE LEFT BANK.

THE 2010 HABITAT ASSESSMENT REVEALED A FLOW REGIME CHANGE DUE TO DC WASA REPAIRING AN ILLICIT DISCHARGE TO STREAM. IRON FLOCCULANT PRESENT, HEAVY SEDIMENT LOADS.

IN 2010 AND 2012 MACROINVERTEBRATE SAMPLES WERE COLLECTED AND WILL BE ANALYZED AT A LATER DATE.

Detail Report for FORT STANTON TRIBUTARY

ID: DCTFS01R_00

State: DC - 2014

Single Cat.(User Cat.): 5(DC
- 4A)

Water Information:	FORT STANTON TRIBUTARY	
	Location: FORT STANTON TRIBUTARY IS A TRIBUTARY OF THE ANACOSTIA RIVER WHICH ORIGINATES NEAR ERIE STREET AND PEARSON PLACE, SE JUST NORTH OF THE SMITHSONIAN'S ANACOSTIA MUSEUM.	Water Type: RIVER Size: 1.3 MILES Next Scheduled Monitoring Date: N/A

Overall Assessment

** (USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.

FORT STANTON'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 26.32%, 0.0% AND 21.05% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE IS NOT SUPPORTED. PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0% AND 21.05% OF THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE SUPPORT IS NOT SUPPORTED. THE DECISION IS BASED ON THE DC STREAM SURVEY CONDUCTED IN 2010 AND CONVENTIONAL POLLUTANT DATA. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0%, 0%, 0.0% AND 21.05% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY, FORT STANTON DID NOT SUPPORT ITS FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE D.C. COMMISSIONER OF PUBLIC HEALTH.

NAVIGATION IS NOT A DESIGNATED USE.

BECAUSE OF THE ABOVE USE DECISIONS, THIS SEGMENT DID NOT SUPPORT THE OVERALL USE SUPPORT CLASSIFICATION.

THE 2010 MACROINVERTEBRATE ASSESSMENT WHICH WAS COLLECTED DURING THE 2009 DCSS SAMPLE PERIOD REVEALED CHIRONOMIDAE AS THE DOMINANT TAXA, WITH HIGH DIVERSITY.

THE 2011 AND 2013 DCSS REVEALED FINE SEDIMENT AND IRON FLOCCUTANT IN THE STREAMBED. THERE WAS A BLOCKAGE AT THE 59 METER MARK, AND WQD STAFF WAS NOT ABLE TO ACCESS THE STREAM BEYOND THAT POINT TO THE 75 METER MARK. THE TREES ON THE RIGHT BANK WERE CLEARED JUST BEYOND THE 10 METER MARK, GRASSES AND SHRUBS GROWING IN THEIR PLACE. GULLY ON THE LEFT BANK CAUSES SEVERE BUFFER BREAK, DRAINS PARKING LOT FOR NEW DEVELOPMENT.

IN 2011 AND 2013 MACROINVERTEBRATE SAMPLES WERE COLLECTED AND WILL BE ANALYZED AT A LATER DATE.

REPORTS WITH MORE INFORMATION INCLUDE:

*ANALYSIS OF BIOLOGICAL SAMPLES: DISTRICT OF COLUMBIA PHYTOPLANKTON, ZOOPLANKTON AND BENTHIC MACROINVERTEBRATE SAMPLES, RHITHRON ASSOCIATES, OCTOBER 2010.

Overall Assessment

**(USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.

FOUNDRY BRANCH'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 42.11%, 5.0% AND 5.0% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE IS SUPPORTED. PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 5.0% AND 5.0% OF THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE SUPPORT IS NOT SUPPORTED. THE DECISION IS BASED ON THE 2012 DC STREAM SURVEY CONDUCTED, NO AQUATIC LIFE WAS OBSERVED. TEMPERATURE, PH, DISSOLVED OXYGEN AND TUBIDITY VIOLATED THE WATER QUALITY STANDARDS 0%, 5.0%, 0.0% AND 5.0% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY, FOUNDRY BRANCH DID

NOT SUPPORT ITS FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE D.C. COMMISSIONER OF PUBLIC HEALTH.

NAVIGATION IS NOT A DESIGNATED USE.

BECAUSE OF THE ABOVE DECISIONS, THIS SEGMENT DID NOT SUPPORT THE OVERALL USE SUPPORT CLASSIFICATION.

TFB02 IS A MONITORING STATION WHERE PHYSICAL, CHEMICAL, AND BIOLOGICAL ASSESSMENT DATA ARE COLLECTED.

DURING THE 2012 MACROINVERTEBRATE AND PHYSICAL HABITAT ASSESSMENTS SEVERAL OVERSERVATION WERE MADE-THERE WERE ROCKS WITH FILAMENTOUS ALGAE, DOWN MATURE TREES, A BUFFER BREAK ON THE LEFT BANK AND FLASHY STREAM FLOW. THE CONDUCTIVITY WAS HIGH.

DURING THE 2010 HABITAT ASSESSMENT SULFOUROUS SMELL OBSERVED AND NO AQUATIC LIFE PRESENT.

IN 2010 AND 2012 MACROINVERTEBRATE SAMPLES WERE COLLECTED AND WILL BE ANALYZED AT A LATER DATE.

Overall Assessment

** (USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.

HICKEY RUN'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 56.86%, 1.67% AND 10.34% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE IS NOT SUPPORTED. PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 1.67% AND 10.34% OF THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE SUPPORT IS NOT SUPPORTED. THE DECISION IS BASED ON THE DC STREAM SURVEY CONDUCTED IN 2010 AND CONVENTIONAL POLLUTANT DATA. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0%, 1.67%, 13.79% AND 10.34% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY, HICKEY RUN DID NOT SUPPORT ITS FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE D.C. COMMISSIONER OF PUBLIC HEALTH.

NAVIGATION IS NOT A DESIGNATED USE.

BECAUSE OF THE ABOVE USE DECISIONS, THIS SEGMENT DID NOT SUPPORT THE OVERALL USE SUPPORT CLASSIFICATION.

THE 2010 MACROINVERTEBATE ASSESSMENT (SAMPLES COLLECTED IN

2009) REVEALED CHIRONOMIDAE AS THE DOMINANT TAXA, WITH A HIGH DIVERSITY OF SPECIES.

IN 2009, ONLY THE SPRING SAMPLING WAS CONDUCTED. IN 2011 AND 2012 NO ASSESSMENTS WERE CONDUCTED DUE TO A SEWAGE LEAK FROM DC WASA SERVICE LINES, A MEMO IS ON FILE IN WQD.

REPORTS WITH MORE INFORMATION INCLUDE:

*ANALYSIS OF BIOLOGICAL SAMPLES: DISTRICT OF COLUMBIA PHYTOPLANKTON, ZOOPLANKTON AND BENTHIC MACROINVERTEBRATE SAMPLES, RHITHRON ASSOCIATES, OCTOBER 2010.

Detail Report for KINGMAN LAKE

ID: DCAKL00L_00

State: DC - 2014

Single Cat.(User Cat.): 5(DC
- 3,4A)

Water Information:	KINGMAN LAKE	
	Location: LOCATED BETWEEN CHILDRENS ISLAND AND RFK STADIUM PARKING LOT ON THE UPPER ANACOSTIA. THE NORTHEAST BOUNDARY SWIRL CONCENTRATOR IS LOCATED JUST DOWN RIVER FROM THE LAKE.	Water Type: FRESHWATER LAKE Size: 102.7 ACRES Next Scheduled Monitoring Date: N/A Trophic Status: N/A Public Lake: No
Use Information		
Assessed:	Attainment Status	Uses
	Fully Supporting	Navigation
	Not Supporting	Primary Contact Recreation Protection and Propagation of Fish, Shellfish and Wildlife Protection of Human Health related to Consumption of Fish and Shellfish Secondary Contact Recreation and Aesthetic Enjoyment

Types of Assessment

Assessment Type	Uses	Assessment Confidence
HABITAT	Navigation	GOOD
PHYSICAL/CHEMICAL	Protection and Propagation of Fish, Shellfish and Wildlife Secondary Contact Recreation and Aesthetic Enjoyment	GOOD GOOD
PATHOGEN INDICATORS	Primary Contact Recreation	GOOD

Cause Information

Causes	Associated Uses	Pollutant? Confidence
Arsenic	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
BOD, Biochemical oxygen demand	Protection and Propagation of Fish, Shellfish and Wildlife	Yes
Chlordane	Protection of Human Health related to Consumption of Fish and Shellfish	Yes

Copper	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
DDD	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
DDE	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
DDT	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
Dieldrin	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
Fecal Coliform	Primary Contact Recreation	Yes
Heptachlor epoxide	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
Oil and Grease	Protection and Propagation of Fish, Shellfish and Wildlife	Yes
Polychlorinated biphenyls	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
Polycyclic Aromatic Hydrocarbons (PAHs) (Aquatic Ecosystems)	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
Total Suspended Solids (TSS)	Protection and Propagation of Fish, Shellfish and Wildlife Secondary Contact Recreation and Aesthetic Enjoyment	Yes
Turbidity	Primary Contact Recreation Protection and Propagation of Fish, Shellfish and Wildlife Secondary Contact Recreation and Aesthetic Enjoyment	Yes
Zinc	Protection of Human Health related to Consumption of Fish and Shellfish	Yes

Comments On:

Overall Assessment

**** (USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.**

KINGMAN LAKE'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH

AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 27.27%, 2.91%, AND 70.59% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE IS NOT SUPPORTED. TURBIDITY VIOLATED THE WATER QUALITY STANDARD 70.59% OF THE TIME.

THE AQUATIC LIFE USE IS NOT SUPPORTED. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0%, 2.91%, 8.91%, AND 70.59% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY IN PLACE, KINGMAN LAKE DID NOT SUPPORT THE FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE DC COMMISSIONER OF PUBLIC HEALTH. THE ADVISORY URGES NON-CONSUMPTION OF CATFISH, CARP OR EEL AND LIMITED CONSUMPTION OF OTHER FISH CAUGHT IN ALL DISTRICT OF COLUMBIA WATERS.

KINGMAN LAKE FULLY SUPPORTED ITS NAVIGATION USE.

BECAUSE OF THE ABOVE USE SUPPORT DECISIONS, KINGMAN LAKE DID NOT SUPPORT THE OVERALL SUPPORT CLASSIFICATION.

Detail Report for KLINGLE VALLEY

ID: DCTKV01R_00

State: DC - 2014

Single Cat.(User Cat.): 5(DC-3,4A,5)

Water Information:	KLINGLE VALLEY	
	Location: KLINGLE VALLEY TRIBUTARY FLOWS THROUGH A RESIDENTIAL AREA AND DISCHARGES INTO ROCK CREEK FROM THE WEST NEAR THE PORTER STREET BRIDGE. THE STREAM'S REACH PARALLELS THE SOUTH SIDE OF KLINGLE ROAD.	Water Type: RIVER Size: 0.8 MILES Next Scheduled Monitoring Date: N/A
Use Information		
	Attainment Status	Uses

Overall Assessment

** (USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d)

CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.

KLINGLE VALLEY'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 20.0%, 0.0% AND 0.0% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE IS SUPPORTED. PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0% AND 0.0% OF THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE SUPPORT IS NOT SUPPORTED. THE DECISION IS BASED ON THE DC STREAM SURVEY CONDUCTED IN 2010 AND CONVENTIONAL POLLUTANT DATA. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0%, 0.0%, 0.0% AND 0.0% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY, KLINGLE VALLEY DID NOT SUPPORT ITS FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE D.C. COMMISSIONER OF PUBLIC HEALTH.

KLINGLE VALLEY WAS NOT ASSESSED FOR NAVIGATION.

BECAUSE OF THE ABOVE USE DECISIONS, THIS SEGMENT DID NOT SUPPORT THE OVERALL USE SUPPORT CLASSIFICATION.

THE 2010 MACROINVERTEBRATE ASSESSMENT (SAMPLES COLLECTED IN 2009) REVEALED CHIRONOMIDAE AS THE DOMINANT TAXA.

HYDROPSYCHIDAE AND BAETIDAE WERE ALSO PRESENT.

DURING THE 2013 DCSS THE STREAM HAD LOW FLOW AND BUFFER BREAKS ON THE LEFT BANK. THERE WERE MODERATE BAR FORMATIONS AND DEWATERED ROOTWADS. THERE WAS ALSO A CONCRETE RETENTION BARRIER COVERING 75% OF THE ASSESSMENT SITE.

THE 2011 DCSS REVEALED ALGAL GROWTH, EXTENSIVE BAR FORMATIONS AND POCKETS OF STANDING WATER AT THE 75 METER MARK. LARGE DOWN TREE ABOVE THE 50 METER MARK. THE MAXIMUM THALWEG DEPTH WAS LESS THAN 0.3 METERS. THE STREAM WAS PARTIALLY DRY.

IN 2011 AND 2013 MACROINVERTEBRATE SAMPLES WERE COLLECTED AND WILL BE ANALYZED AT A LATER DATE.

REPORTS WITH MORE INFORMATION INCLUDE:

*ANALYSIS OF BIOLOGICAL SAMPLES: DISTRICT OF COLUMBIA PHYTOPLANKTON, ZOOPLANKTON AND BENTHIC MACROINVERTEBRATE SAMPLES, RHITHRON ASSOCIATES, OCTOBER 2010.

Detail Report for LUZON BRANCH

ID: DCTLU01R_00

State: DC - 2014

Single Cat.(User Cat.): 5(DC-3,4A,5)

Water Information:	LUZON BRANCH	
	Location: THE STREAM FLOWS THROUGH A SMALL PARK AND ENTERS ROCK CREEK AT JOYCE ROAD.	Water Type: RIVER Size: 1 MILES Next Scheduled Monitoring Date: N/A
Use Information

Overall Assessment

** (USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.

LUZON BRANCH'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF CONVENTIONAL WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH

AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 55.0%, 0.0% AND 0.0% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE IS SUPPORTED. PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0% AND 0.0% OF THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE SUPPORT IS NOT SUPPORTED. THE DECISION IS BASED ON THE DC STREAM SURVEY CONDUCTED IN 2002 AND CONVENTIONAL POLLUTANT DATA. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0%, 0.0%, 0.0% AND 0.0% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY, LUZON BRANCH DID NOT SUPPORT ITS FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE D.C. COMMISSIONER OF PUBLIC HEALTH.

LUZON BRANCH WAS NOT ASSESSED FOR NAVIGATION.

BECAUSE OF THE ABOVE DECISIONS, THIS SEGMENT DID NOT SUPPORT THE OVERALL USE SUPPORT CLASSIFICATION.

THE STREAM'S 2002 HBI SCORE SUGGESTED A FAIRLY SIGNIFICANT AMOUNT OF ORGANIC POLLUTION IN THE STREAM. THE DOMINANT TAXA FOUND WAS TURBELLARIA. HABITAT WAS ALSO MODERATELY IMPAIRED ON THE RIGHT BANK AND SEVERELY IMPAIRED ON THE LEFT BANK.

29 ORGANISMS WERE FOUND IN THE SAMPLE COLLECTED. THE DIVERSITY OF THE STREAM WAS POOR AS EVIDENCED BY ONLY 2 TAXA IDENTIFIED. ORGANICS AND TOXICS ARE POSSIBLY THE CAUSE OF DEGRADATION.

DURING THE 2010 AND 2012 STREAM ASSESSMENTS ALGAE WAS PRESENT ON ROCKS, AND ABUNDANCE OF LEECHES, AND AN ABUNDANCE OF PIEDMONT ROCKS IN THE STREAM. THERE WERE BUFFER BREAKS ON BOTH

BANKS AND THE CONDUCTIVITY WAS HIGH. A GOLF COURSE NEAR THE STREAM.

IN 2010 AND 2012 MACROINVERTEBRATE SAMPLES WERE COLLECTED AND WILL BE ANALYZED AT A LATER DATE.

Detail Report for MELVIN HAZEN VALLEY BRANCH

ID: DCTMH01R_00

State: DC - 2014

Single Cat.(User Cat.): 5(DC-3,4A,5)

Overall Assessment

** (USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.

NASH RUN'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 55.0%, 0.0% AND 10.53% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE IS NOT SUPPORTED. PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0% AND 10.53% OF THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE SUPPORT IS NOT SUPPORTED. THE DECISION IS BASED ON THE DC STREAM SURVEY CONDUCTED IN 2010 AND CONVENTIONAL POLLUTANT DATA. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0%, 0.0%, 10.53% AND 10.53% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY, NASH RUN DID NOT SUPPORT ITS FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE D.C. COMMISSIONER OF PUBLIC HEALTH.

NAVIGATION IS NOT A DESIGNATED USE.

BECAUSE OF THE ABOVE USE DECISIONS, THIS SEGMENT DID NOT SUPPORT THE OVERALL USE SUPPORT CLASSIFICATION.

THE 2010 MACROINVERTEBRATE ASSESSMENT (SAMPLES COLLECTED IN 2009) REVEALED CHIRONOMIDAE AS THE DOMINANT TAXA. NO SENSITIVE ORGANISMS PRESENT.

DURING THE 2013 DCSS THERE WAS AN OIL SHEEN ON THE WATER'S SURFACE, MODERATE EROSION ON BOTH BANKS, RIP-WRAP ON BOTH BANKS AND A HIGH TRASH VOLUME.

DURING THE 2011 DCSS MACROPHYTES WERE PRESENT. THE STREAM SMELLED OF SULFUR. THE STREAM WAS SAMPLEABLE UP TO THE 56 METER MARK, DUE TO HIGH TRASH VOLUME AND DOWNED TREES.

IN 2011 AND 2013 MACROINVERTEBRATE SAMPLES WERE COLLECTED AND WILL BE ANALYZED AT A LATER DATE.

** (USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.

NORMANSTONE'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 47.06%, 0.0% AND 10.0% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE IS SUPPORTED. PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0% AND 10.0% OF THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE SUPPORT IS NOT SUPPORTED. THE DECISION IS BASED ON THE DC STREAM SURVEY CONDUCTED IN 2010 AND CONVENTIONAL POLLUTANT DATA. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0%, 0.0%, 5.0% AND 10.0% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY, NORMANSTONE DID NOT SUPPORT ITS FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE D.C. COMMISSIONER OF PUBLIC HEALTH.

NORMANSTONE WAS NOT ASSESSED FOR NAVIGATION.

BECAUSE OF THE ABOVE DECISIONS, THIS SEGMENT DID NOT SUPPORT THE OVERALL USE SUPPORT CLASSIFICATION.

THE 2010 MACROINVERTEBRATE ASSESSMENT (SAMPLES COLLECTED IN 2009) REVEALED CHIRONOMIDAE AS THE DOMINANT TAXA. HYDROPSYCHIDAE WERE ALSO PRESENT.

DURING THE 2011 AND 2013 DCSS THERE WERE BROKEN SEWER PIPES THAT TRANSECT THE STREAM AND THE ODOR OF SEWAGE PRESENT OBSERVED. THERE WERE THREE LARGE DOWNED TREES IN THE 75 METER STRETCH. SEVERE EROSION PRESENT ON THE LEFT AND RIGHT BANK OF THE STREAM. THERE WERE BUFFER BREAKS ON THE LEFT AND RIGHT BANK OF STREAM FROM STORM DRAINS. EXPOSED SEWER LINE AT THE 75 METER MARK WITH DISCHARGE OBSERVED.

IN 2011 AND 2013 MACROINVERTEBRATE SAMPLES WERE COLLECTED AND WILL BE ANALYZED AT A LATER DATE.

REPORTS WITH MORE INFORMATION INCLUDE:

*ANALYSIS OF BIOLOGICAL SAMPLES: DISTRICT OF COLUMBIA PHYTOPLANKTON, ZOOPLANKTON AND BENTHIC MACROINVERTEBRATE SAMPLES, RHITHRON ASSOCIATES, OCTOBER 2010.

Detail Report for OXON RUN

ID: DCTOR01R_00

State: DC - 2014

Single Cat.(User Cat.): 5(DC - 3,4A)

Water Information:	OXON RUN	
	Location: THIS STREAM ORIGINATES IN PRINCE GEORGES COUNTY, MARYLAND AND FLOWS INTO THE DISTRICT BEFORE IT DIPS BACK INTO MARYLAND JUST BEFORE IT ENTERS OXON COVE	Water Type: RIVER Size: 3.2 MILES Next Scheduled Monitoring Date: N/A
Use Information		
Assessed:	Attainment Status	Uses
	Fully Supporting	Secondary Contact Recreation and Aesthetic Enjoyment
	Not Supporting	Primary Contact Recreation Protection and Propagation of Fish, Shellfish and Wildlife Protection of Human Health related to Consumption of Fish and Shellfish

Types of Assessment

Assessment Type	Uses	Assessment Confidence
PHYSICAL/CHEMICAL	Protection and Propagation of Fish, Shellfish and Wildlife	GOOD
	Protection of Human Health related to Consumption of Fish and Shellfish	GOOD
	Secondary Contact Recreation and Aesthetic Enjoyment	GOOD
PATHOGEN INDICATORS	Primary Contact Recreation	GOOD

Cause Information

Causes	Associated Uses	Pollutant? Confidence
Arsenic	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
Chlordane	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
Copper	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
DDT	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
Dieldrin	Protection of Human Health related to Consumption of Fish and Shellfish	Yes

Fecal Coliform	Primary Contact Recreation	Yes
Heptachlor epoxide	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
Polychlorinated biphenyls	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
Polycyclic Aromatic Hydrocarbons (PAHs) (Aquatic Ecosystems)	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
Zinc	Protection of Human Health related to Consumption of Fish and Shellfish	Yes

Observed Effects

Observation

Benthic-Macroinvertebrate Bioassessments

Associated Uses

Protection and Propagation of Fish, Shellfish and Wildlife

Comments On:

Overall Assessment

**(USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.

OXON RUN'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 27.78%, 5.0% AND 5.0% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE IS SUPPORTED. PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 5.0% AND 5.0% OF

THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE IS NOT SUPPORTED. THE DECISION IS BASED ON THE DC STREAM SURVEY CONDUCTED IN 2002 AND CONVENTIONAL POLLUTANT DATA. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0%, 5.0%, 0.0% AND 5.0% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY, OXON RUN DID NOT SUPPORT ITS FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE D.C. COMMISSIONER OF PUBLIC HEALTH.

NAVIGATION IS NOT A DESIGNATED USE.

BECAUSE OF THE ABOVE USE DECISIONS, THIS SEGMENT DID NOT SUPPORT THE OVERALL USE SUPPORT CLASSIFICATION.

THE 2002 HBI SCORE SUGGESTS FAIRLY SIGNIFICANT ORGANIC POLLUTION. A HIGH PERCENTAG OF EPT, SUGGEST THE STREAMS HAS SOME SENSITIVE ORGANISMS. THE DOMINANT TAXA WAS COENAGRINIDAE. 42 ORGANISMS WERE FOUND IN THE SAMPLE.

DURING THE 2012 DCSS RIP-WRAP HAD BEEN USED TO STABILIZE THE LEFT BANK, THERE WAS A BUFFER BREAK ON THE LEFT BANK WAS OBSERVED.

THE 2010 STREAM ASSESSMENT REVEALED NEWLY OBSERVED FIN-FISH SPECIES, THE ROSY-NOSE DACE. HIGH SEDIMENT LOADS OBSERVED AT THE 0M PORTION OF STREAM. LARGE OF AMOUNTS OF TRASH PRESENT AT THE 75 METER MARK.

IN 2010 AND 2012 MACROINVERTEBRATE SAMPLES WERE COLLECTED AND WILL BE ANALYZED AT A LATER DATE.

Detail Report for PINEHURST BRANCH

ID: DCTPI01R_00

State: DC - 2014

**** (USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.**

PINEY BRANCH'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 41.18%, 0.0% AND 0.0% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE

21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE IS SUPPORTED. PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 5.0% AND 10.0% OF THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE SUPPORT WAS NOT SUPPORTED. THE DECISION IS BASED ON THE DC STREAM SURVEY CONDUCTED IN 2012. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0%, 0.0%, 5.0% AND 0.0% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY, PINEY BRANCH DID NOT SUPPORT ITS FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE D.C. COMMISSIONER OF PUBLIC HEALTH.

PINEY BRANCH WAS NOT ASSESSED FOR NAVIGATION.

BECAUSE OF THE ABOVE USE DECISIONS, THIS SEGMENT DID NOT SUPPORT THE OVERALL USE SUPPORT CLASSIFICATION.

DURING THE 2012 DCSS MACROPHYTES COVERED A MAJORITY OF THE STREAMBED, THERE WAS A BUFFER BREAK ON THE RIGHT BANK AND HIGH VOLUMES OF TRASH OBSERVED. THE SMELL OF SEWAGE WAS ALSO PRESENT.

DURING THE 2010 MACROINVERTEBRATE ASSESSMENT IT WAS OBSERVED THAT THERE WERE LARGE NUMBERS OF DOWNED TREES. LARGE AMOUNTS OF ALGAE PRESENT. ODOR CONSISTENT WITH RAW SEWAGE OBSERVED. DURING HABITAT ASSESSMENT IT WAS OBSERVED THAT THE BOTTOM OF STREAM AT 15 METER MARK TO THE 75 METER MARK WAS NOT VISIBLE DUE TO ALGAL BLOOM. THERE WAS A HIGH VOLUME OF TRASH PRESENT IN STREAM.

Comments On:

Overall Assessment

** (USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.

POPE BRANCH'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 38.89%, 5.0% AND 10.0% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT

ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1108.

SECONDARY CONTACT RECREATION USE IS SUPPORTED. PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 5.0% AND 10.0% OF THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE SUPPORT IS NOT SUPPORTED. THE DECISION IS BASED ON THE DC STREAM SURVEY CONDUCTED IN 2010 AND CONVENTIONAL POLLUTANT DATA. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0%, 5.0%, 0.0% AND 10.0% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY, POPE BRANCH DID NOT SUPPORT ITS FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE D.C. COMMISSIONER OF PUBLIC HEALTH.

NAVIGATION IS NOT A DESIGNATED USE.

BECAUSE OF THE ABOVE USE DECISIONS, THIS SEGMENT DID NOT SUPPORT THE OVERALL USE SUPPORT CLASSIFICATION.

THE 2003 HBI SCORE SUGGESTS SOME ORGANIC POLLUTION. NO SENSITIVE ORGANISMS WERE FOUND (EPT). A HIGH PERCENTAGE OF GATHERER-COLLECTOR ORGANISMS SUGGEST POLLUTANTS; BECAUSE THEY ARE GENERALIST AND CAN THRIVE IN POLLUTED WATER. ALL 75 METERS OF THE HABITAT WERE MODERATELY IMPAIRED. THE DOMINANT TAXA WAS OLIGOCHAETA (WHICH SUGGEST SEWAGE LOVING ORGANISMS). 39 ORGANISMS FOUND IN THE ENTIRE SAMPLE. HABITAT AND TOXICS ARE THE POSSIBLE CAUSES FOR DEGRADATION.

THE 2010 MACROINVERTEBRATE ASSESSMENT (SAMPLES COLLECTED IN 2009) REVEALED CHIRONOMIDAE AS THE DOMINANT TAXA. NO SENSITIVE SPECIES WERE PRESENT.

DURING THE 2013 DCSS SEDIMENT IN THE STREAMBED , LOW FLOW, SAND DEPOSITS, HIGH VOLUME OF TRASH WERE OBSERVED. DEEP POOLS OBSERVED IN 2011 ARE BEING FILLED WITH SEDIMENT.

IN 2011 OBSERVATIONS OF THIS STREAM REVEALED SEVERE EMBEDDEDNESS AND UNUSUALLY DEEP POOLS.

IN 2011 AND 2013 MACROINVERTEBRATE SAMPLES WERE COLLECTED AND

WILL BE ANALYZED AT A LATER DATE.

REPORTS WITH MORE INFORMATION INCLUDE:

Comments On:

Overall Assessment

**** (USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.**

PORTAL BRANCH'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 35.29%, 0.0% AND 5.0% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT

ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE IS SUPPORTED. PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0% AND 5.0% OF THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE SUPPORT IS NOT SUPPORTED. THE DECISION IS BASED ON THE DC STREAM SURVEY CONDUCTED IN 2002 AND CONVENTIONAL POLLUTANT DATA. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0%, 0.0%, 0.0% AND 5.0% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY, PORTAL BRANCH DID NOT SUPPORT ITS FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE D.C. COMMISSIONER OF PUBLIC HEALTH.

PORTAL BRACH WAS NOT ASSESSED FOR NAVIGATION.

BECAUSE OF THE ABOVE DECISIONS, THIS SEGMENT DID NOT SUPPORT THE OVERALL USE SUPPORT CLASSIFICATION.

THE 2002 HBI SCORE SUGGESTS SIGNIFICANT ORGANIC POLLUTION. THE DOMINANT TAXA IDENTIFIED WAS GASTROPODA, WHICH IS VERY TOLERANT TO TOXIC WATER QUALITY. HABITAT IN THE STREAM WAS SEVERELY IMPAIRED. ONLY 21 ORGANISMS WERE FOUND IN THE ENTIRE SAMPLE. SIX STORM DRAINS THAT DISCHARGE IN DC AFFECT PORTAL BRANCH. ORGANICS AND HABITAT ARE POSSIBLY THE CAUSE OF DEGRADATION TO THE STREAM.

DURING THE 2012 DCSS RECENT LEFT BANK STABILIZATION WAS EVIDENT. THE RIPARIAN AREA ON BOTH BANKS WAS REDUCED. THERE WAS ALGAE, FINE SEDIMENT, REDDISH GREY CLAY PRESENT DUE TO SEVERE BANK EROSION.

THE 2010 STREAM ASSESSMENT REVEALED SEVERE BANK EROSION ON BOTH THE RIGHT AND LEFT BANK OF THE STEAM. THE STREAM'S CONDUCTIVITY WAS HIGH.

**(USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.

THE LOWER POTOMAC'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 10.42%, 6.80 AND 11.01% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE IS NOT SUPPORTED. PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 6.80% AND 11.01% OF THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE IS NOT SUPPORTED. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0%, 6.80%, 0% AND 11.01% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY IN PLACE THIS SECTION OF THE POTOMAC DID NOT SUPPORT THE FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE D.C. COMMISSONER OF PUBLIC HEALTH. THE ADVISORY URGES NON-CONSUMPTION OF CATFISH, CARP OR EEL AND LIMITED CONSUMPTION OF OTHER FISH CAUGHT IN ALL DISTRICT OF COLUMBIA WATERS.

THIS SECTION OF THE POTOMAC FULLY SUPPORTED ITS NAVIGATION USE.

BECAUSE OF THE ABOVE USE SUPPORT DECISIONS, THIS SEGMENT OF THE POTOMAC DID NOT SUPPORT ITS OVERALL USE.

Overall Assessment

**(USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.

THE MIDDLE POTOMAC'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 12.50%, 11.41% AND 10.53% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE IS NOT SUPPORTED. PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 11.41% AND 10.53% OF THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE IS NOT SUPPORTED. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0%, 11.41%, 0% AND 10.53% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY, THE MIDDLE POTOMAC DID NOT SUPPORT ITS FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE D.C. COMMISSIONER OF PUBLIC HEALTH. THE ADVISORY URGES NON-CONSUMPTION OF CATFISH, CARP OR EEL AND LIMITED CONSUMPTION OF OTHER FISH CAUGHT IN ALL DISTRICT OF

COLUMBIA WATERS.

THE MIDDLE POTOMAC FULLY SUPPORTED ITS NAVIGATION USE.

BECAUSE OF THE ABOVE USE SUPPORT DECISIONS, THE MIDDLE POTOMAC
DID NOT SUPPORT ITS OVERALL SUPPORT USE CLASSIFICATION.

Overall Assessment

**(USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.

THE LOWER ROCK CREEK'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 41.18%, 1.69% AND 11.86% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE IS NOT SUPPORTED. PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 1.69% AND 11.86% OF THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE SUPPORT IS NOT SUPPORTED. THE DECISION IS BASED ON THE DC STREAM SURVEY CONDUCTED IN 2010 AND CONVENTIONAL POLLUTANT DATA. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0%, 1.69%, 0.0% AND 11.86% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY, LOWER ROCK CREEK DID NOT SUPPORT ITS FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE D.C. COMMISSIONER OF PUBLIC HEALTH.

LOWER ROCK CREEK FULLY SUPPORTED ITS NAVIGATION USE.

BECAUSE OF THE ABOVE DECISIONS, THIS SEGMENT DID NOT SUPPORT THE OVERALL USE SUPPORT CLASSIFICATION.

DURING THE 2013 BENTHIC MACROINVERTEBRATE AND PHYSICAL HABITAT ASSESSMENTS THE RIGHT BANK HAD BEEN STABILIZED WITH A LARGE ROCK AND EMERGENT VEGETATION.

DURING THE 2013 FIN-FISH ASSESSMENT MORE LARGE AND SMALLMOUTH BASS WERE OBSERVED.

DURING THE 2012 BENTHIC MACROINVERTEBRATE AND PHYSICAL HABITAT ASSESSMENTS THE MONITORING SITE WAS MOVED 5 METERS UPSTREAM, BECAUSE THE STREAM IS CHANNELIZED AND THERE IS A BUFFER BREAK ON THE RIGHT BANK.

MACROINVERTEBRATE SAMPLES COLLECTED DURING IN 2012 AND 2013 WILL BE ANALYZED AT A LATER DATE.

THE 2010 MACROINVERTEBRATE ASSESSMENT (SAMPLES COLLECTED IN 2009) REVEALED CHIRONOMIDAE AS THE DOMINANT TAXA WITH MORE THAN 12 SPECIES PRESENT. THERE WERE NOT EPT TAXA PRESENT.

REPORTS WITH MORE INFORMATION INCLUDE:

*ANALYSIS OF BIOLOGICAL SAMPLES: DISTRICT OF COLUMBIA PHYTOPLANKTON, ZOOPLANKTON AND BENTHIC MACROINVERTEBRATE SAMPLES, RHITHRON ASSOCIATES, OCTOBER 2010.

Overall Assessment

**(USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.

THE UPPER ROCK CREEK'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 40.0%, 1.67% AND 10.17% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE

21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE IS NOT SUPPORTED. PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 1.67% AND 10.17% OF THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE SUPPORT IS NOT SUPPORTED. THE DECISION IS BASED ON THE DC STREAM SURVEY CONDUCTED IN 2010 AND CONVENTIONAL POLLUTANT DATA. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0%, 1.67%, 0.0% AND 10.17% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY, UPPER ROCK CREEK DID NOT SUPPORT ITS FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE D.C. COMMISSIONER OF PUBLIC HEALTH.

THE UPPER ROCK CREEK FULLY SUPPORTED ITS NAVIGATION USE.

BECAUSE OF THE ABOVE DECISIONS, THIS SEGMENT DID NOT SUPPORT THE OVERALL USE SUPPORT CLASSIFICATION.

DURING THE 2012 AND 2013 MACROINVERTEBRATE AND PHYSICAL HABITAT ASSESSMENTS LOW FLOW WAS OBSERVED. THERE WAS CONCRETE ON THE RIGHT BANK JUST BELOW THE ZERO METER ASSESSMENT LOCATION. THERE WERE MODERATE BAR FORMATIONS.

MACROINVERTEBRATE SAMPLES COLLECTED IN 2012 AND 2013 WILL BE ANALYZED AT A LATER DATE.

THE 2010 MACROINVERTEBRATE ASSESSMENT (SAMPLES COLLECTED IN 2009) REVEALED A HIGH DIVERSITY OF SPECIES PRESENT. EPHEMEROPTERA AND TRICHOPTERA WERE PRESENT. CHIRONOMIDAE WAS THE DOMINANT TAXA.

REPORTS WITH MORE INFORMATION INCLUDE:

*ANALYSIS OF BIOLOGICAL SAMPLES: DISTRICT OF COLUMBIA PHYTOPLANKTON, ZOOPLANKTON AND BENTHIC MACROINVERTEBRATE SAMPLES, RHITHRON ASSOCIATES, OCTOBER 2010.

Overall Assessment

**** (USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.**

SOAPSTONE CREEK'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 46.67%, 0.0% AND 5.26% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE

21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE IS SUPPORTED. PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0% AND 5.26% OF THE TIME, RESPECTIVELY

THE AQUATIC LIFE USE SUPPORT IS NOT SUPPORTED. THE DECISION IS BASED ON THE DC STREAM SURVEY CONDUCTED IN 2003 AND CONVENTIONAL POLLUTANT DATA. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0%, 0.0%, AND 0.0% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY, SOAPSTONE CREEK DID NOT SUPPORT ITS FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE D.C. COMMISSIONER OF PUBLIC HEALTH.

SOAPSTONE CREEK WAS NOT ASSESSED FOR NAVIGATION.

BECAUSE OF THE ABOVE USE DECISIONS, THIS SEGMENT DID NOT SUPPORT THE OVERALL USE SUPPORT CLASSIFICATION.

THE 2003 HABITAT SCORE SUGGEST A FAIRLY SIGNIFICANT ORGANIC POLLUTION PROBLEM IN THE STREAM. THE DOMINANT TAXA FOUND WAS CHIRONOMIDAE (TOLERANT GENERALIST). THE STREAM'S HABITAT WAS MODERATELY IMPAIRED. 27 ORGANISMS WERE FOUND IN ENTIRE SAMPLE. THE STREAM POSSIBLY SUFFERS FROM ORGANIC AND TOXIC POLLUTION.

DURING THE 2012 DCSS A BUFFER BREAK ON THE LEFT BANK WAS PRESENT. THERE WAS ALSO ALGAE ON THE ROCKS AND A SANDY SUBSTRATE OBSERVED.

Detail Report for TEXAS AVENUE TRIBUTARY

Comments On:

Overall Assessment

** (USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF

303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.

TEXAS AVENUE TRIBUTARY'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 41.18%, 0.0% AND 44.44% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE IS NOT SUPPORTED. PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0% AND 44.44% OF THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE SUPPORT IS NOT SUPPORTED. THE DECISION IS BASED ON THE DC STREAM SURVEY CONDUCTED IN 2002 AND CONVENTIONAL POLLUTANT DATA. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0%, 0.0%, 5.56% AND 44.44% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY, TEXAS AVENUE TRIBUTARY DID NOT SUPPORT ITS FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE D.C. COMMISSIONER OF PUBLIC HEALTH.

NAVIGATION IS NOT A DESIGNATED USE.

BECAUSE OF THE ABOVE DECISIONS, THIS SEGMENT DID NOT SUPPORT THE OVERALL USE SUPPORT CLASSIFICATION.

THE 2002 STREAM'S HBI SCORE SUGGESTS SOME ORGANIC POLLUTION. A HIGH PERCENTAGE OF GATHERER-COLLECTOR ORGANISMS SUGGESTS

TOXIC AND ORGANIC POLLUTANTS, BECAUSE THEY ARE GENERALIST AND CAN THRIVE IN POLLUTED WATERS. NO SENSITIVE ORGANISMS WERE FOUND (EPT). THE DOMINANT TAXA SEEN WAS OLIGOCHAETA, (SEWAGE LOVING ORGANISMS). THE STREAM'S HABITAT WAS SEVERELY IMPAIRED. 11 ORGANISMS WERE FOUND IN THE SAMPLE COLLECTED. THIS STREAM WILL HAVE TO BE EVALUATED FOR WAYS TO PREVENT FURTHER BANK EROSION.

DURING THE 2012 DCSS OBSERVATIONS INCLUDED DOWNED TREES, SEVERE EROSION ON BOTH BANKS, EXTENSIVE BAR FORMATIONS AND A LEFT BANK BUFFER BREAK.

DURING THE 2010 DCSS OBSERVATIONS INCLUDED IRON FLOCCULANTS COATING STREAM BED WITH OXIDIZED SEDIMENT PRESENT. EXTREME EMBEDDEDNESS PRESENT IN 75 METER STRETCH. ALSO, SULFUROUS ODOR PRESENT WHEN SEDIMENT WAS DISTURBED. LARGE AMOUNTS OF TRASH PRESENT IN AND AROUND THE STREAM.

Detail Report for TIDAL BASIN

State: DC - 2014

Single Cat.(User Cat.): 5(DC
- 3,4A)

Water Information:	TIDAL BASIN	
	Location: ADJACENT TO THE JEFFERSON MEMORIAL AND THE WELL-KNOWN CHERRY TREES OF THE NATION'S CAPITOL	Water Type: FRESHWATER LAKE Size: 108.4 ACRES Next Scheduled Monitoring Date: N/A Trophic Status: N/A Public Lake: No
Use Information		
	Attainment Status	Uses
	Fully Supporting	Navigation
Assessed:	Not Supporting	Primary Contact Recreation Protection and Propagation of Fish, Shellfish and Wildlife Protection of Human Health related to Consumption of Fish and Shellfish Secondary Contact Recreation and Aesthetic Enjoyment

Types of Assessment

Assessment Type	Uses	Assessment Confidence
HABITAT	Navigation	GOOD
PHYSICAL/CHEMICAL	Protection and Propagation of Fish, Shellfish and Wildlife	GOOD
	Protection of Human Health related to Consumption of Fish and Shellfish	GOOD
	Secondary Contact Recreation and Aesthetic Enjoyment	GOOD
PATHOGEN INDICATORS	Primary Contact Recreation	GOOD

Cause Information

Causes	Associated Uses	Pollutant? Confidence
Chlordane	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
DDD	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
DDE	Protection of Human Health related to Consumption of Fish and Shellfish	Yes

DDT	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
Dieldrin	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
Fecal Coliform	Primary Contact Recreation	Yes
Heptachlor epoxide	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
pH	Primary Contact Recreation Protection and Propagation of Fish, Shellfish and Wildlife Secondary Contact Recreation and Aesthetic Enjoyment	Yes
Polychlorinated biphenyls	Protection of Human Health related to Consumption of Fish and Shellfish	Yes
Polycyclic Aromatic Hydrocarbons (PAHs) (Aquatic Ecosystems)	Protection of Human Health related to Consumption of Fish and Shellfish	Yes

Comments On:

Overall Assessment

**(USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.

THE TIDAL BASIN'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE SUPPORT IS NOT SUPPORTED. E. COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 4.35%, 23.33% AND 1.69% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE IS NOT SUPPORTED. PH AND

TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 23.33% AND 1.69% OF THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE IS NOT SUPPORTED. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0%, 23.33%, 0.0% AND 1.69% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY, THE TIDAL BASIN DID NOT SUPPORT THE FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994 BY THE D.C. COMMISSIONER OF PUBLIC HEALTH. THE ADVISORY URGES NON-CONSUMPTION OF CATFISH, CARP OR EEL AND LIMITED CONSUMPTION OF OTHER FISH CAUGHT IN ALL DISTRICT OF COLUMBIA WATERS.

THE TIDAL BASIN FULLY SUPPORTED ITS NAVIGATION USE.

BECAUSE OF THE ABOVE USE SUPPORT DECISIONS, THE TIDAL BASIN DID NOT SUPPORT THE OVERALL USE CLASSIFICATION.

Overall Assessment

**** (USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.**

THE WASHINGTON SHIP CHANNEL'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E.COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 11.54%, 8.77% AND 0.0% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE IS SUPPPORTED. PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 8.77% AND 0.0% OF THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE IS SUPPORTED. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0%, 8.77%, 0.0% AND 0.0% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY, THE WASHINGTON SHIP CHANNEL DID NOT SUPPORT ITS FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE D.C. COMMISSIONER OF PUBLIC HEALTH. THE ADVISORY URGES NON-CONSUMPTION OF CATFISH, CARP, OR EEL AND LIMITED CONSUMPTION OF OTHER FISH CAUGHT IN ALL DISTRICT OF COLUMBIA WATERS. THEREFORE, THE WASHINGTON SHIP CHANNEL DID NOT SUPPORT EPA FISH CONSUMPTION CRITERIA.

THE WASHINGTON SHIP CHANNEL FULLY SUPPORTED ITS NAVIGATION USE.

BECAUSE OF THE ABOVE USE SUPPORT DECISIONS, THE WASHINGTON SHIP CHANNEL DID NOT SUPPORT THE OVERALL USE CLASSIFICATION.

Overall Assessment

** (USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d)

CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.

LOWER WATTS BRANCH'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 38.0%, 10.0% AND 10.34% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE IS NOT SUPPORTED. PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 10.0% AND 10.34% OF THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE SUPPORT IS NOT SUPPORTED. THE DECISION IS BASED ON THE DC STREAM SURVEY CONDUCTED IN 2010 AND CONVENTIONAL POLLUTANT DATA. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0%, 10.0%, 1.69% AND 10.34% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY, LOWER WATTS BRANCH DID NOT SUPPORT ITS FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE D.C. COMMISSIONER OF PUBLIC HEALTH.

NAVIGATION IS NOT A DESIGNATED USE.

BECAUSE OF THE ABOVE USE DECISIONS, THIS SEGMENT DID NOT SUPPORT THE OVERALL USE SUPPORT CLASSIFICATION.

THE 2003 HBI SCORE SUGGESTS NO APPARENT ORGANIC POLLUTION.

CHIRONOMIDAE (GENERALIST THAT CAN THRIVE IN POLLUTED WATERS AND OLIGOCHAETA (SEWAGE LOVING ORGANISMS) ARE THE ONLY TWO TAXA FOUND. ONLY 5 ORGANISMS WERE FOUND IN THE SAMPLE COLLECTED AND THEY INCLUDED NO SENSITIVE ORGANISMS (EPT).

THE 2010 MACROINVERTEBRATE ASSESSMENT (SAMPLES COLLECTED IN 2009) REVEALED CHIRONOMIDAE AS THE DOMINANT TAXA, WITH HIGH DIVERSITY. NO SENSITIVE ORGANISMS PRESENT.

DURING THE 2012 AND 2013 DCSS LOW FLOW, IRON FLOCCULLANT RIGHT BANK EROSION AND HIGH VOLUMES OF TRASH WERE OBSERVED. THE STREAM IS STRAIGHT AND CHANNELIZED. THE LEFT BANK IS MOSTLY CONCRETE.

REPORTS WITH MORE INFORMATION INCLUDE:

*ANALYSIS OF BIOLOGICAL SAMPLES: DISTRICT OF COLUMBIA PHYTOPLANKTON, ZOOPLANKTON AND BENTHIC MACROINVERTEBRATE SAMPLES, RHITHRON ASSOCIATES, OCTOBER 2010.

Overall Assessment

** (USER CAT.) IN THE SUB-HEADER REFLECTS THE DISTRICT'S 2014 303(d) CATEGORY LISTINGS FOR THIS WATERBODY. FOR THE COMPLETE LIST OF 303(d) CATEGORIES AND CONTAMINANTS OF CONCERN FOR THIS

WATERBODY SEGMENT SEE APPENDIX 3.10: 2014 303(d) LIST, FOUND IN THE 2014 DISTRICT OF COLUMBIA INTEGRATED REPORT.

UPPER WATTS BRANCH'S EVALUATIONS OF USE SUPPORT DECISIONS ARE BASED ON A FIVE YEAR STATISTICAL EVALUATION (2009-2013) OF AMBIENT WATER QUALITY DATA COLLECTED BY THE MAB.

THE PRIMARY CONTACT (SWIMMABLE) USE IS NOT SUPPORTED. E. COLI, PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 41.18%, 8.40% AND 11.30% OF THE TIME, RESPECTIVELY. PLEASE NOTE THE DISTRICT OF COLUMBIA WATER QUALITY STANDARDS PROHIBIT SWIMMING IN THE POTOMAC AND ANACOSTIA RIVERS AND ROCK CREEK UNTIL ALL THE PARAMETERS USED TO DETERMINE USE SUPPORT ARE BEING CONSISTENTLY ATTAINED (DCMR TITLE 21, CHAPTER 11, SECTION 1108). THE PARAMETERS USED TO SUPPORT THE PRIMARY CONTACT RECREATION DESIGNATED USE CAN BE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1104.8. THE DIRECTOR MAY ISSUE A DECISION THAT ALLOWS A SPECIAL SWIMMING EVENT IN THE POTOMAC RIVER. THE GUIDELINES FOR A SPECIAL SWIMMING EVENT ARE FOUND IN DCMR TITLE 21, CHAPTER 11, SECTION 1108.

THE SECONDARY CONTACT RECREATION USE IS NOT SUPPORTED. PH AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 8.40% AND 11.30% OF THE TIME, RESPECTIVELY.

THE AQUATIC LIFE USE SUPPORT IS NOT SUPPORTED. THE DECISION IS BASED ON THE DC STREAM SURVEY CONDUCTED IN 2010 AND CONVENTIONAL POLLUTANT DATA. TEMPERATURE, PH, DISSOLVED OXYGEN AND TURBIDITY VIOLATED THE WATER QUALITY STANDARDS 0.0%, 8.40%, 0.85% AND 11.30% OF THE TIME, RESPECTIVELY.

BECAUSE OF A FISH CONSUMPTION ADVISORY, UPPER WATTS BRANCH DID NOT SUPPORT ITS FISH CONSUMPTION USE. DETERMINATION OF THE FISH CONSUMPTION USE WAS BASED ON A PUBLIC HEALTH ADVISORY ISSUED ON NOVEMBER 15, 1994, BY THE D.C. COMMISSIONER OF PUBLIC HEALTH.

NAVIGATION IS NOT A DESIGNATED USE.

THE 2010 MACROINVERTEBRATE ASSESSMENT (SAMPLES COLLECTED IN 2009) REVEALED CHIRONOMIDAE AS THE DOMINANT TAXA. NO SENSITIVE ORGANISMS PRESENT.

DURIN THE 2013 DCSS THE STREAM HAD A GREY COLORED CLAY BOTTOM AND FEW MATURE TRESS ON THE RIGHT BANK WAS OBSERVED.

DURING THE 2012 DCSS THERE WERE NEW EVERGREENS AND ROOTMATS ON BOTH BANKS OBSERVED. THE PHYSICAL HABITAT HAS IMPROVED SINCE THE COMPLETION OF THE RESTORATION PROJECT.

REPORTS WITH MORE INFORMATION INCLUDE:

*ANALYSIS OF BIOLOGICAL SAMPLES: DISTRICT OF COLUMBIA PHYTOPLANKTON, ZOOPLANKTON AND BENTHIC MACROINVERTEBRATE SAMPLES, RHITHRON ASSOCIATES, OCTOBER 2010.

Primary Contact Use Support (Class A)

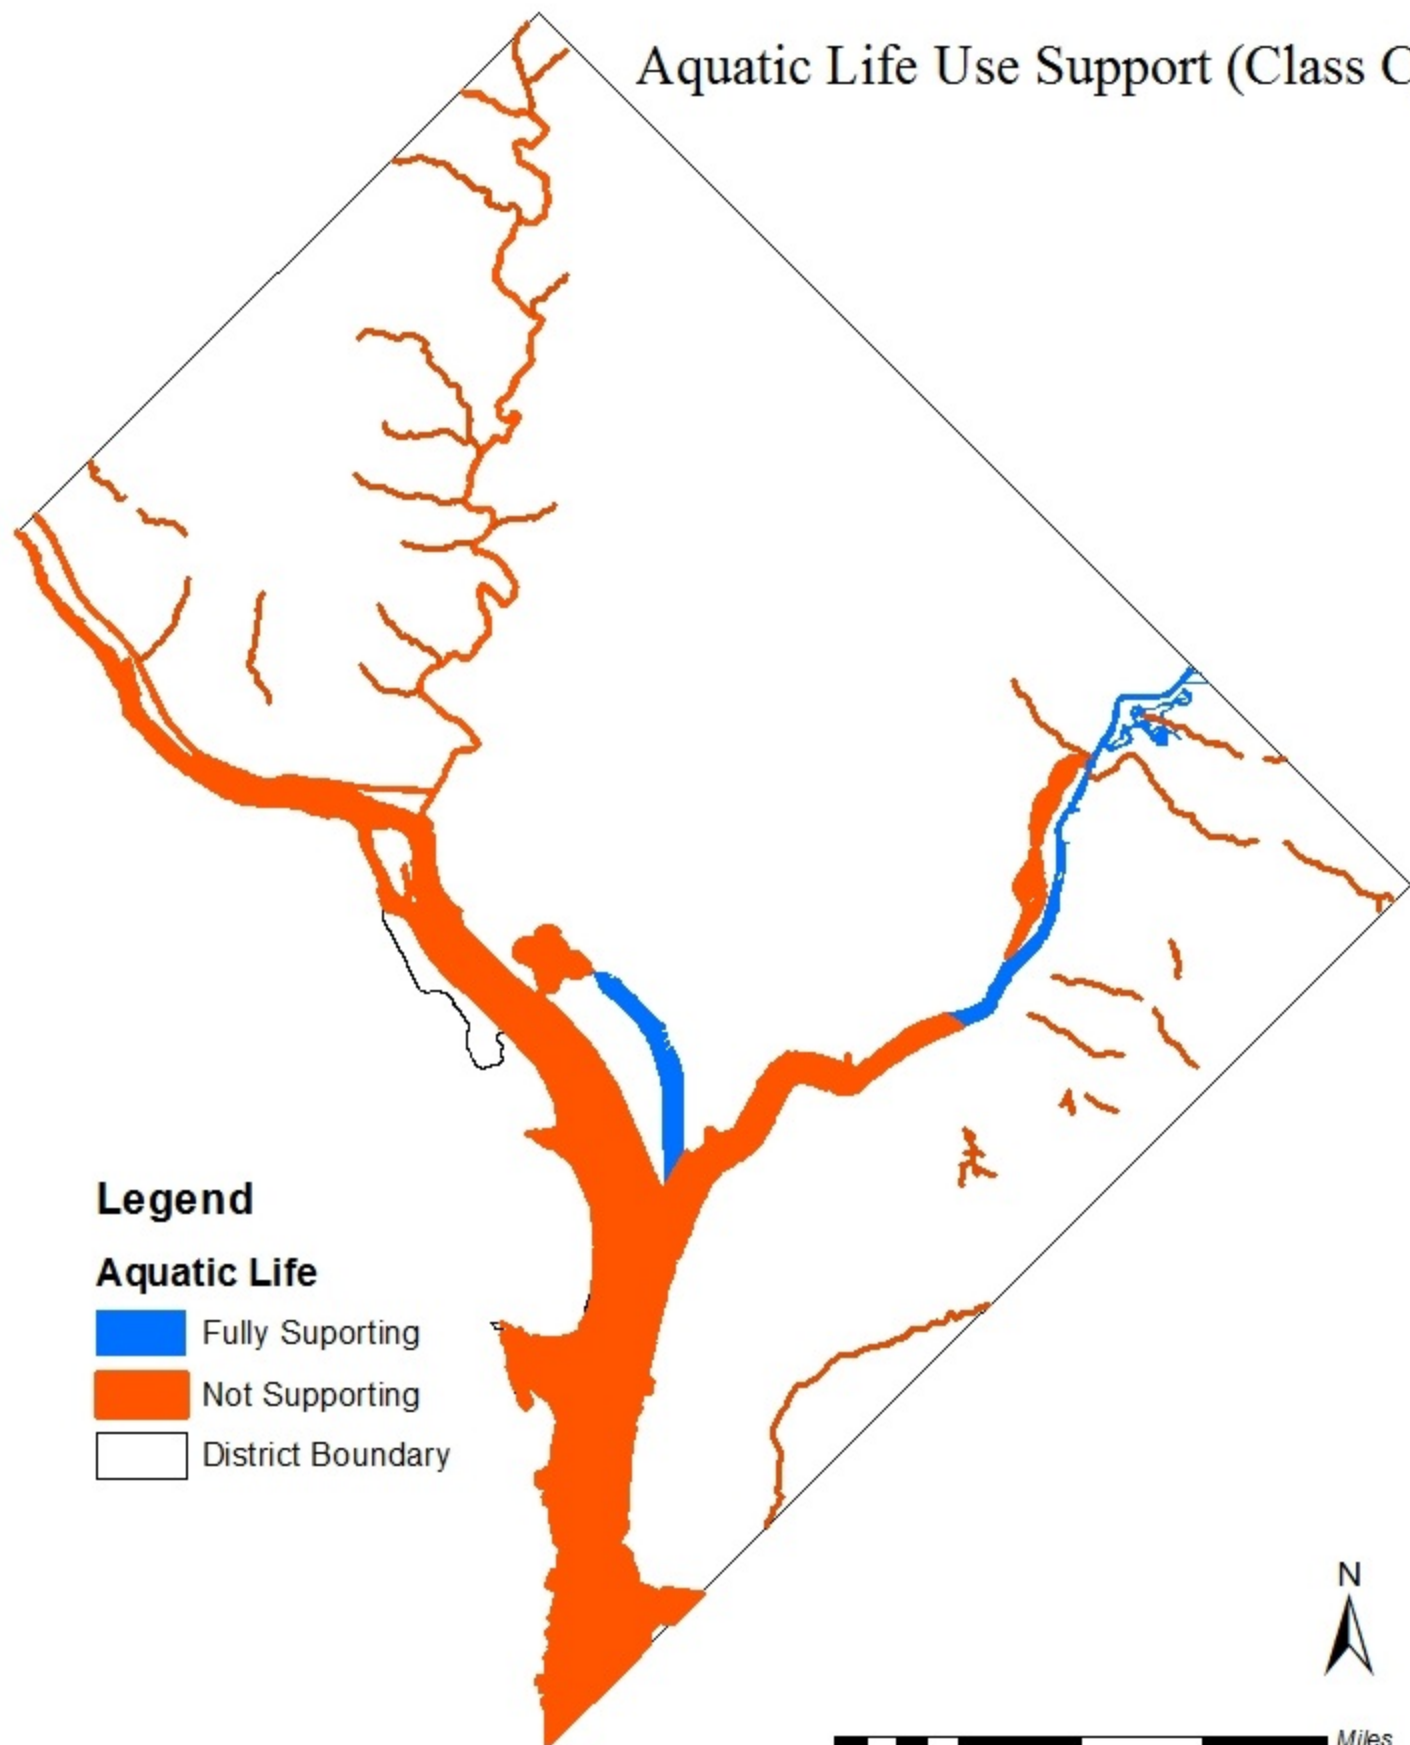

Appendix 3.5: Degree of Support for the Protection of Primary Contact Recreation

Secondary Contact Use Support (Class B)

Appendix 3.6: Degree of Support for the Protection of Secondary Contact and Aesthetic Enjoyment.

Aquatic Life Use Support (Class C)

Legend

Aquatic Life

- Fully Supporting
- Not Supporting
- District Boundary

Appendix 3.7: Degree of Support for the Protection and Propagation of Fish, Shellfish and Wildlife

Fish Consumption Support (Class D)

Appendix 3.8: Degree of Support for the Protection of Human Health Related to the Consumption of Fish and Shellfish.

Navigation Use Support (Class E)

Categorization of District of Columbia Waters

Category 1- All designated uses are supported, no use is threatened.

No DC waters fit this category.

Category 2- Available data and/or information indicate that some, but not all, designated uses are supported.

No DC waters fit this category.

Category 3- There is insufficient available data and/or information to make a use support determination.

Category 4- Available data and/or information indicate that at least one designated use is not being supported or is threatened, but a TMDL is not needed.

Subcategories:

Category 4A- TMDLs needed to result in a designated use attainment have been approved or established by EPA.

Category 4B- TMDL not required. Other pollution control requirements (such as permits, strategies) are expected to address waterbody/pollutant combinations and result in attainment of the water quality standards in a reasonable period of time.

Category 4C- Impaired or threatened waters for one or more designated uses. TMDL is not required as impairment is not caused by a pollutant.

Category 5- Available data and/or information indicate that a designated use is not being supported or is threatened, and a TMDL is needed.

¹ These pollutants moved from Category 4a to Category 3. Fish tissue studies conducted were based on fish caught in the Anacostia and Potomac Rivers, not the tributaries. The Tetrtech study did not detect the pollutant, but a TMDL exists for the pollutant. More information is needed to determine if the pollutant is the cause of non-attainment.

Appendix 5.4. Altitude of tidal stage at U.S. Geological Survey station 01651750 ANACOSTIA RIVER AQUATIC GARDENS AT WASHINGTON, D.C., October 1, 2012 through September 30, 2013, in feet (NAVD88). [Data are provisional and subject to revision.]

APPENDIX 5.5 - MAJOR SOURCES OF GROUND WATER CONTAMINATION

Sources	Ten Highest-Priority Sources (✓)	Relative Priority	Factors
Animal Feedlots	NA	--	--
Containers		L	A, B, D, E
CERCLIS Sites	✓	H	A, B, D, E, F, G, H
De-icing Applications	✓	M	A, D, F, G, H
Federal Superfund (NPL)	✓	H	A, B, D, E, F, G, H
Fill		H	A, D, E, F, G, H
Graveyards	✓	M	--
Landfills (permitted)	✓	H	A, B, D, E, F, G, H
Landfills (unpermitted)	✓	U ^a	A, B, D, E, F, G, H
Material Transfer Operations		M	A, B, D, E, F, H
Material Stockpiles		L	A, B
Mining and Mine Drainage	NA	--	--
Pesticide Applications	✓	M	A, B, C, F, G, H
Pipeline and Sewer Lines	✓	M	F, H
Radioactive Disposal Sites	NA	--	--
RCRA Sites	✓	M	A, B, D, E, F, G, H
Septic Tanks	NA	--	--
Shallow Injection Wells		L	F, G
Storage Tanks (above ground)		M	A, B, D, F, G, H
Storage Tanks (underground)	✓	H	A, B, D, E, F, G, H
Storm Water Drainage Wells		M	I
Surface Impoundments		L	A, B
Transportation of Materials	✓	M	A, B, C, D, G, H
Urban Runoff		M	F, H
Waste Tailings	NA	--	--
Waste Piles	NA	--	--

- A. Human health and/or environmental risk (toxicity)
- B. Size of the population at risk
- C. Location of the sources relative to drinking water sources
- D. Number and/or size of contaminant sources
- E. Hydrogeologic sensitivity
- F. State findings, other findings
- G. Documented from mandatory reporting
- H. Geographic distribution/occurrence
- I. Assigned for pipelines and sewer lines and is a combination of the age and construction material of the lines (in D.C., there still are brick lines at least 100 years old).

^a Unknown. The locations and nature of the materials disposed in unpermitted landfills are not yet known.

NA - Not Applicable

L - Low

M - Medium

H - High

U - Unknown

(-) - Not a Priority

APPENDIX 5.6 - SUMMARY OF DC GROUNDWATER RELATED PROGRAMS

Programs or Activities	Check	Implementation Status	Responsible State Agency
Ambient ground water monitoring system	✓	Partly established	DDOE
Aquifer vulnerability assessment ⁽¹⁾	✓	Fully established	DDOE
Aquifer mapping ⁽²⁾	✓	Under development	DDOE
Aquifer characterization	✓	Partly developed	DDOE
Comprehensive data management system ⁽³⁾	✓	Partly developed	DDOE
Emergency Response	✓	Fully established	HSEMA
EPA-endorsed Core Comprehensive State Ground Water protection Program (CSGWPP)	✓	Under development	DDOE
Ground water discharge permits			
Ground water Best Management Practices			
Ground water legislation	✓	Fully established	DDOE
Ground water classification	✓	Fully established	DDOE
Ground water quality standards	✓	Fully established	DDOE
Interagency coordination for ground water protection initiatives	✓	Under development	DDOE
Land Remediation and Development (Brownfields Revitalization Program)	✓	Fully established	DDOE
Nonpoint Source Controls	✓	Under development	DDOE
Pesticide State Management Plan	✓	Fully established	DDOE
Pollution Prevention Program	✓	Under development	DDOE

Programs or Activities	Check	Implementation Status	Responsible State Agency
State RCRA Program incorporating more stringent requirements than RCRA Primacy (except for corrective action)	✓	Fully established	DDOE
State septic system regulations			
Underground storage tank installation requirements	✓	Fully established	DDOE
Underground Storage Tank Remediation Fund	✓	Fully established	DDOE
Underground Storage Tank Permit Program	✓	Fully established	DDOE
Underground Injection Control Program			
Vulnerability assessment for drinking water/wellhead protection	✓	Fully established	DDOE
Well abandonment regulations	✓	Pending	DDOE
Wellhead Protection Program (U.S. EPA-approved)			
Well installation regulations	✓	Pending	DDOE

HSEMA – Homeland Security Emergency management Agency
DDOE – District Department of the Environment

APPENDIX 5.7: SHALLOW AQUIFER QUALITY/CONTAMINATION

Aquifer: Shallow Aquifer				
Source Type	Present in reporting area	Number of sites in area	Number of sites that are listed and/or have confirmed releases	Number with confirmed ground water contamination
NPL	Yes	1	1	1
CERCLIS (non-NPL)	Yes	34	18	11
DOD/DOE	Yes (a)	47	9	8
UST- Total opened and closed	Yes	2852 (b) (g)	1736 (g)	477 (g)
UST Active/Opened	Yes	521 (b)	139 (c)	97 (c)
RCRA Corrective Action	Yes	2	2	1
Underground Injection	Yes (d)	23	—	---
State Sites (Voluntary Clean Lands Program)	Yes (e)	23	23	---
Nonpoint Sources	(f)	—	—	---
Other	Yes	26	26	26
Totals		3462	1825	625

NPL - National Priority List
 CERCLIS (non-NPL) - Comprehensive Environmental Response, Compensation, and Liability Information System
 DOE - Department of Energy
 DOD - Department of Defense
 UST - Underground Storage Tanks
 RCRA - Resource Conservation and Recovery Act

(a) Only DOD facilities. The number represents the number of facilities. Within a facility, there are several areas of concern resulting from distinct sources (e.g., LUST, landfill, maintenance

shops, etc). Ground water contamination assessment is on going for the majority of the sites. Numbers were provided by the Hazardous Waste Division.

(b) Data represent the number of UST sites or facilities known to DC from previous and current annual registration. This value includes sites with heating oil and hazardous materials tanks. Numbers were provided by the Underground Storage Tank Branch, DDOE.

(c) There is on-going groundwater contamination assessment/remediation and monitoring by responsible parties for more than 60 percent of the opened LUST cases pending closure. These cases include heating oil contaminated sites.

(d) One UIC site has stormwater injection wells. The remaining 22 UIC sites are operated for ground water remediation wells. The District does not regulate injection wells. Injection well numbers were not updated from 2006 by the USEPA.

(e) Source type data make no distinction between State and non-State sites.

(f) See Nonpoint Source Section

(g) Most of these sites are not closed, either the USTs were removed or abandoned in-place or the soil and/or groundwater contamination was remediated and the LUST case closed.
